

Labour Market Notes

Employment pulled down by private sector job losses

Alberta

- ◆ **Employment falls in October.** Alberta employment declined by 10,800 this month, partially offsetting the increase in September.
- ◆ **Private sector loses jobs.** Employment was pulled down by private sector losses of 17,800, the largest decline since February. Public sector employment increased by 6,400, while self-employment was flat (+400). Full-time employment was also down (-11,600), and part-time was flat (+800).
- ◆ **Declines across most industries.** Employment losses were primarily in the goods sector (-9,800), with service sector employment down only slightly (-1,000). The largest industry losses were in natural resources (-4,500), other services, such as repair, maintenance and personal services (-4,500), trade (-3,600) and manufacturing (-2,200). Since December 2014, the service sector has added 38,400 jobs, while jobs in the goods sector have fallen by 34,200.
- ◆ **Unemployment rate continues ascent.** Alberta's unemployment rate ticked up 0.1 percentage points to 6.6% in October. This was due to employment falling more than the labour force (-9,300). The unemployment rate is now 2.1 percentage points higher than in January.
- ◆ **Employment growth weakens.** Year-over-year (y/y) employment was up only 13,400, or 0.6%, in October. This was the weakest year-over-year change since December 2010.
- ◆ **Earnings continue to weaken.** Average weekly earnings fell for the seventh straight month to \$1,129 in August. Year-over-year growth in earnings declined 2.6%, due to a 5.4% y/y decline in the goods sector. Service sector earnings growth remains positive at 0.8% y/y. Year-to-date, Alberta earnings are up only 0.6%.

Canada

- ◆ **Canadian employment builds on previous gains.** There were 44,400 jobs added in October. Gains were concentrated in Ontario (+29,200) and British Columbia (+23,300). Alberta lost the most jobs, followed by Quebec (-5,600). Canada has added 143,400 net new jobs since October 2014, a 0.8% y/y gain.
- ◆ **Unemployment rate down slightly.** The Canadian unemployment rate fell by 0.1 percentage points to 7.0% in October.
- ◆ **Canadian earnings weaken in August.** Canadian average weekly earnings fell by 0.7% from the previous month to \$947. Year-over-year growth was 0.8%, the lowest Canadian growth since collection began in the early 2000s. Alberta and Saskatchewan were the only provinces to experience negative growth. Year-to-date, Canadian earnings were up 2.0%.

Albertans work part-time voluntarily

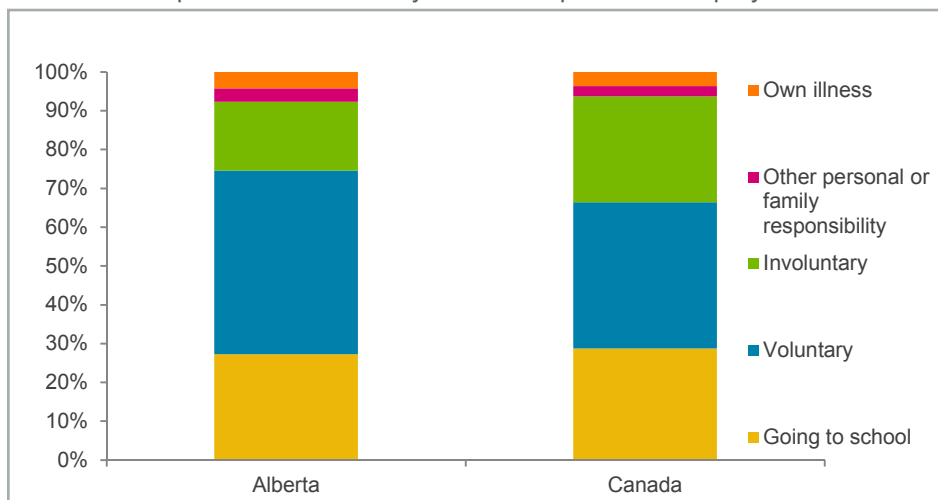

In 2014, there were 376,100 part-time workers in Alberta, accounting for 16.5% of total employment. Over the first 10 months of 2015, the share increased slightly to 16.8%. There are a number of reasons Albertans work part-time, but the majority of part-time workers prefer to work part-time hours. This month's Labour InSight explores the reasons for part-time employment in Alberta.

Most choose part-time employment

Most of Alberta's part-time workers chose to work part-time, which is defined as working less than 30 hours per week. The share of Alberta part-time workers noting personal preference has been increasing steadily since the question was introduced

in 1997, from 24% to 31% in 2014. Women accounted for over 70% of part-time workers in 2014, citing taking care of children as one of the main reasons for preferring to work part-time. In 2014, student and voluntary part-time workers represented three-quarters of all part-time workers, much higher than the national average of 66% (Chart 1).

Strong economy plays a role

With plenty of jobs available in Alberta over the past few years, most people who wanted to work full-time could find work, keeping the number of involuntary part-time workers low. Less than one-fifth of Alberta's part-time workers in 2014 were involuntary part-time workers, substantially lower than the national average of 27%. Higher average incomes in Alberta have also provided families with flexibility in working hours, such as part-time work. [The gap in average earnings between Alberta and other provinces](#) has been increasing since 2000, and was 20% higher than the Canadian average in 2014.

Involuntary part-time rising

Part-time employment, driven by involuntary part-time workers, tends to move with the business cycle; low during boom times and rising during tougher times (Chart 2). With labour market conditions weakening in 2015, part-time employment has increased by 3.6% over the first 10 months of the year. At the same time, involuntary part-time employment has increased 14.4% year-to-date, accounting for over 70% of the increase in part-time employment. However, the increase in involuntary part-time workers so far this year is significantly lower than the 2009 recession.
