* Special Conditions
From December 16 to April 15 in the mainstem of the Beaver River downstream of its confluence with the Sand River, all water-covered areas of the water body all excavated material shall be removed from the water and all fill and backfill material that is placed into the water body as part of the works shall be the size of coarse sand or larger.

Locations of Class A and B Water Bodies
Any person who carries out an activity governed by a Code of Practice (Code) under the Water Act, must use all of the following information to determine the Class of water body applicable to the activity location: the Code provisions and the applicable Management Area Map (the map), including the associated map legend and its tables. The table below describes the locations of Class A and B water bodies. Where water body Classes appear to overlap on the map or where the water body Class indicated by the map differs from the map legend and its tables, the water body Class indicated in the map legend and tables will apply.

* Special Conditions
The designation of the portion of the mapped waterbody (locally known as Oldman Creek) is Class A downstream from the western boundary of the road allowance located between Section 26 and Section 27 of Township 53, Range 23, West of the Fourth Meridian.

** Special Conditions
For only unmapped and Class D tributaries to the mainstem North Saskatchewan River, the following conditions apply: For those tributaries that discharge into the North Saskatchewan River through an outfall structure, Class A status applies only to the portion of the tributary below the outfall structure. Class C status applies to the portion of the tributary upstream from and including the outfall structure. For all other tributaries, Class A status applies to the 100 metre portion of the tributary upstream from its confluence with the North Saskatchewan River. Class C status applies to the portion of the tributary upstream of the Class A reach.

This map forms part of the Code of Practice for Pipelines and Telecommunication Lines Crossing a Water Body, the Code of Practice for Watercourse Crossings and the Code of Practice for Outfall Structures on Water Bodies. This map is subject to change.

Note: The Water Body Classifications and Restricted Activity Periods on this map are only for water bodies as defined in the Water Act Codes of Practice (Codes). The Codes also outline provisions for: determining exceptions to coded water bodies, and determining the classification and Restricted Activity Periods for unmapped and uncoded water bodies. For detailed information please refer to the appropriate Code.

Wetlands, sloughs, and both fish bearing and non-fish bearing lakes are outside the scope of the Codes. Activities on these types of water bodies may require authorizations under the Water Act and, therefore, an application under the Water Act should be submitted to your nearest regional Alberta Environment office.

For additional information on the Codes and other authorizations check the Alberta Environment and Sustainable Resource Development website at: <http://environment.alberta.ca/01330.html> or contact your nearest regional Alberta Environment office.
