Part 1. Water Quality Guidelines for the Protection of Aquatic Life

CWQG (CCME 2018)

a1 = Guideline is based on temperature preferences of biota. In this case, the cold water biota guidelines for both early life and other life stages are shown.

a2 = Guideline assumes clear flow conditions and is based on the following:

Clear flow - Maximum increase of 25 mg/L (TSS) or 8 NTU (turbidity) from background levels for any short-term exposure (e.g., 24-h period).

Maximum average increase of 5 mg/L (TSS) or 2 NTU (turbidity) from background levels for longer term exposures (e.g., > 24-h).

High flow - Maximum increase of 25 mg/L (TSS) or 8 NTU (turbidity) from background levels at any time when background levels are between 25 and 250 mg/L (TSS) or 80 NTU (turbidity). Should not increase more than 10% of background levels when background is >250 mg/L (TSS) or >80 NTU (turbidity).

a3 = Guideline is for ammonia as nitrogen.

Guideline = 0.1 (at pH=9.0 and temperature= 25°C)

Guideline = 40 (at pH= 6.5 and temperature= 5°C)

a4 = Guideline is expressed as nitrate-N.

a5 = Guideline is expressed as nitrite-N.

a6 = The trophic status of lakes is assessed using the total phosphorus concentrations. The Canadian Trigger Ranges are as follows: ultra-oligotrophic - <0.004 mg/L; oligotrophic - 0.004 to 0.01 mg/L; mesotrophic - 0.01 to 0.02 mg/L; meso-eutrophic - 0.02 to 0.035 mg/L; eutrophic - 0.035 to 0.1 mg/L; and hyper-eutrophic - >0.1 mg/L.

a7 = Guideline = 100 µg/L at pH ≥ 6.5

a8 = The chronic benchmark concentration of 0.09 µg/L is for waters of 50 mg/L hardness.

When water hardness is >0 to <17 mg/L, guideline is 0.04 µg/L.

At hardness ≥17 mg/L to ≤ 280 mg/L guideline = 10^{(0.83(log(hardness))-2.46)}

At hardness > 280 mg/L the guideline is 0.37 µg/L.

a9 = Guideline is for hexavalent chromium (Cr_{VI}) because its guideline is more stringent than the trivalent chromium (Cr_{III}).

a10 = Copper guideline is dependent on hardness.

At hardness 0 to <82 mg/L, the guideline is 2 µg/L.

At water hardness ≥82 to ≤180 mg/L, guideline = e^{0.8545[ln(hardness)]-1.465*0.2}

At water hardness > 180 mg/L, guideline is 4 µg/L.

a11 = Lead guideline is dependent on hardness. Guideline = e^{1.273[ln(hardness)]-4.705}

At water hardness 0 to ≤60 mg/L, guideline is 1 µg/L.

At water hardness >60 to ≤ 180 mg/L, guideline = e^{1.273[ln(hardness)]-4.705}

At water hardness > 180 mg/L, guideline is 7 µg/L.

a12 = Nickel guideline is dependent on hardness.

At water hardness 0 to ≤60 mg/L, guideline is 25 µg/L.

At water hardness >60 to ≤ 180 mg/L, guideline = e^{0.76[ln(hardness)]+1.06}

At water hardness > 180 mg/L, guideline is 150 µg/L.

a13 = Long-term concentration.

AEQG (GoA 2018)

b1 = Thermal additions should not alter thermal stratification or turnover dates, exceed maximum weekly average temperatures, nor exceed maximum short term temperatures.

b2 = A minimum values unless natural conditions are less.

b3 = During clear flows or for clear waters: Maximum increase of 25 mg/L from background for any short term exposure (e.g., 24 hours). Maximum average increase of 5 mg/L from background levels for longer term exposure.

During high flow or for turbid waters: Maximum increase of 25 mg/L from background levels at anytime when background levels are between 25 and 250 mg/L. Should not increase more than 10% of background levels when background is greater than or equal to 250 mg/L.

b4 = Varies with hardness, averaging period is 30 days.

b5 = Varies with pH and temperature; Total NH₃ guideline (as N) N = (0.019/f)*0.8224; f=1/10((pka-ph)+1), where f=un-ionized ammonia fraction.

b6 = Varies with chloride concentration.

b7 = Narrative; varies by water body type and nitrogen/phosphorus fluctuations in relation to aquatic health.

b8 = Equation; varies with hardness.

b9 = Guideline is for hexavalent chromium (Cr VI) because its guideline is more stringent than trivalent chromium.

b10 = Long term guideline applies only to waters of hardness > 50 mg/L.

b11 = Averaging period is 4 days for long term.

b12 = Long-term concentration.

b13 = At pH ≥ 6.5, long-term guideline is 50 µg/L. At pH <6.5, guideline = e^{(1.6-3.327(pH)+0.402(pH)^2)X1000}

FAQG (ECCC 2017)

c1 = Equation, varies with hardness.

Part 2. Drinking Water Quality Guidelines

GCDWQ (Health Canada 2017)

d1 = Aesthetic objective.

d2 = Maximum allowable concentration (MAC).

d3 = Guideline corresponds to nitrate-N and nitrite-N.

d4 = A health-based guideline for aluminum in drinking water has not been established.

Operational guidance values of less than 100 µg/L total

Notes:

Shaded and Bolded cells indicates an aquatic life guideline exceedance.

Shaded and Italicized cells indicates a drinking water guideline exceedance.

Notes:

Shaded and Bolded cells indicates an aquatic life guideline exceedance.

* indicates that the MDL is higher than the guideline value and therefore an exceedance is unknown.
