

APPENDIX H

This appendix provides tables to compare actual harvest activities to the simulated harvest sequence. The following points apply to these tables:

- 1) Simulation areas are based on the current age class across the forest landbase;
- 2) Simulation area below minimum harvest age may exist due to the prioritization of AOP blocks;
- 3) Horizontal stands were separated into two separate records for the purposes of net landbase and timber supply analysis;
- 4) Some minor differences may exist in totals due to rounding.
