

Simulation	Planning Level	Operational Plan
The FMA is divided into four spatially explicit Sustained Yield Units (SYUs).	FMA	Operational Plans will be contained within a unique Sustained Yield Unit.
Each SYU is divided into spatially explicit Compartments.	SUSTAINED YIELD UNIT	Compartment boundaries are used as Operational Planning Unit boundaries.
The simulation follows a specific Compartment sequence.		Operational Planning will follow the same Compartment sequence as the simulation.
Each Compartment is made up of many AVI spatially explicit polygons.	COMPARTMENT	Operational plans define areas to be harvested and summarize which AVI polygons are scheduled.
The simulation selects individual polygons for "harvest". Summaries of area		Summaries of areas selected for harvest by yield class and age are produced.
"harvested" by yield class and age are produced.		Discrepancies of greater than 20% area between operational plan and simulation must be justified in the operational plan approval process.
Individual stands selected for harvest in the simulation are tracked.	STAND	Individual stands actually harvested are tracked.

Figure 3.9 Simulation of Stand Sequencing
