## AADL Approved Product List - Prosthetic Benefits

---

Pricing effective April 1, 2015

Archived

## General Information

### Catalogue Number Information

The AADL funding amount (AADL Price) for most orthotic and prosthetic benefit catalogue numbers is determined using the following formula:

$$(Material\ Cost + Markup) + (Shipping\ Cost) + (Labour\ Hours \times Charge-Out\ Rate)$$

#### Definitions:

- **Material Cost**

The estimated, reasonable costs for the materials required to provide benefit. Where possible the cost will be based on the manufacturer's price list.

Note: for Generic Catalogue Numbers the Specialty Supplier's actual invoice cost is used.

- **Markup**

An additional amount added to the AADL Price intended to account for handling, rework and loss. For most benefits this is determined by taking a percentage of the Material Cost.

- **Shipping Cost**

The estimated, reasonable cost to ship the materials from the manufacturer to the Specialty Supplier.

- **Labour Hours**

The estimated, reasonable number of hours required for a Certified Orthotist/Prosthetist and Technician to assess/fabricate/provide the the benefit.

- **Charge-Out Rate**

An hourly rate to account for the Specialty Supplier's costs related to providing the benefit. This includes the estimated, reasonable costs for: most overhead expenses (excluding materials and shipping cost); labour costs for certified and technical staff; administrative costs and profit margin.

*Note: The above formula and definitions are provided for information purposes only. AADL reserves the right to set and adjust funding amounts as it deems appropriate.*

### Generic Pricing Procedure

Use the AADL Generic Calculator to determine the AADL price for a generic catalogue number.

#### **Procedure**

1. Locate the catalogue number and enter the *manufacturer invoice cost* for the component into the calculator. Do not include shipping costs, exchange or any other cost. The cost used for generic catalogue number must be the manufacturer's invoice cost only. The calculator will automatically add mark-up, shipping and labour costs.
2. Copy and paste the calculation into the Benefit Note on E-Business. Be sure to also indicate the manufacturer and model number in the Benefit Note.
3. Costs over the indicated maximum are indicated in the calculator and are considered an upgrade.

## General Information

### Functional Levels

<b>Lower Limb</b>	
<i>Level 0</i>	Does not have the ability or potential to ambulate or transfer safely with or without assistance and a prosthesis does not enhance their quality of life or mobility.
<i>Level 1</i>	The ability or potential to use a prosthesis for transfers or ambulation on level surfaces at fixed pace. This prosthesis is typical for the household ambulator.
<i>Level 2</i>	The ability or potential for ambulation with the ability to traverse low-level environmental barriers such as curbs, stairs, or uneven surfaces. This prosthesis is typical for the limited community ambulator.
<i>Level 3</i>	The ability or potential for ambulation with variable pace. This prosthesis is typical of a community ambulator with the ability to traverse most environmental barriers while participating in activities of daily living that require prosthetic use beyond simple locomotion.
<i>Level 4</i>	The ability or potential for prosthetic ambulation that exceeds basic ambulation skills, exhibiting high impact, stress, or energy levels. This prosthesis is typical of the prosthetic demands of the child or active adult functioning in the community.
<b>Upper Limb</b>	
<i>Level 5</i>	The ability to enhance a patient's body awareness to improve quality of life and or prepare for the patient's future functional ability.
<i>Level 6</i>	The ability to use the prostheses for basic hand skill activities. Generally, these activities are required for lifting, stabilizing or holding objects between two extremities.
<i>Level 7</i>	The ability to demonstrate a high level of function with the prosthesis that enables a client to perform sophisticated, hand skill patterns. Some typical activities would include grasping and releasing, positioning (pre-position) of the terminal device, or changing to alternate terminal devices.
<i>Level 9</i>	The ability to demonstrate a high level of function with a myoelectric prosthesis that enables a client to perform sophisticated, hand skill patterns.

<i>AADL provides a grant to those clients who are at least a Functional Level 3 and want to upgrade to a microprocessor knee. The grant will be paid directly to the Specialty Supplier once the microprocessor knee has been provided to the client (service date). The individual will own the microprocessor knee. AADL will not pay for repairs or maintenance of a microprocessor knee. The quantity/frequency limit of one microprocessor knee grant per five years will be strictly enforced. A client declaration for the microprocessor knee must be completed and signed prior to the authorization being submitted. A copy of this declaration must be kept on the client file in addition to the AADL client declaration form. AADL will not replace any prosthetic knee provided within 2 years due to client preference.</i>
