

Subject: **SURVEYS - NATURAL BOUNDARY CHANGES**

Date Issued **2007 01 01**

BACKGROUND

The registered owner of land may lose title to existing land or acquire new land through gradual, slow and imperceptible changes to natural boundaries. Through the concept of fluctuating natural boundaries, an owner of land which abuts upon a body of water (i.e., a riparian owner) maintains access to the water and hence the ability to exercise proprietary rights in relation to the body of water. When accretion or erosion affect the natural boundaries of a parcel, the registered owner may make application to the Registrar to amend the description of the parcel to reflect either the current location of the natural boundary or its non-existence. As it is impossible to cover all the situations that may arise, the registrant should contact the Metis Settlements Land Registry regarding the type of plan to be prepared and the necessary consents of the registered owners of parcels that may be adversely affected by the application.

REGISTRATION PROCEDURE

1. If an application is made a plan of survey or a descriptive plan acceptable to the Registrar is required to accompany the application. A plan may not be necessary if the natural boundary is non-existent.

2. **Plan Heading** - An example of plan heading is:

"PLAN SHOWING SURVEY OF _____ FOR THE
PURPOSE OF AMENDING DESCRIPTION DUE TO
CHANGE IN A NATURAL BOUNDARY".

3. The consent of the land interest holders that may be adversely affected is required.

4. Upon the registration of the application, the existing title is cancelled and a new one issued for the parcel as shown on the plan. If an area designation is to be included in the legal description, and the area is not shown on the plan, area certification by an Alberta Land Surveyor must accompany the application. If the natural boundary is non-existent, a new certificate of title is issued including the area formerly covered by the water. Area certification by an Alberta Land Surveyor is required where an area other than that shown on the township plan is to be used.

An example of a new title to be issued:

All that portion of _____ not covered by the waters of _____ lake as shown on a plan of survey of the said township dated _____, containing _____ ha. (_____ acres) more or less and _____ ha. (_____ acres) more or less of accreted land due to the non-existence of the natural boundary (plan no. _____)
