

High School Completion Rate of Students within 3 Years and within 5 Years of Entering Grade 10, Alberta

- While the majority of Alberta students complete high school within three years of entering Grade 10, the five-year rate recognizes that it may take more time for some students to finish high school.
- In addition to those who earn a high school diploma or certificate, Alberta's high school completion rate also includes students who enter an Alberta post-secondary institution or an apprenticeship program within five years of entering Grade 10. This acknowledges that students have completed the high school courses they need to continue their education in a post-secondary program.

High School Completion Rates
