## 1. INTRODUCTION

#### 1.1 Alberta's Framework for the Management of Contaminated Sites

Alberta's framework for the management of contaminated sites is designed to achieve three policy outcomes:

- <u>Pollution prevention</u>: Avoid "impairment of, or damage to, the environment, human health or safety, or property".
- <u>Health protection</u>: Take action on contaminated sites that is commensurate with risk to human health and the environment.
- **<u>Productive use</u>**: Encourage remediation and return of contaminated sites to productive use.

Under this framework, three management options are provided: Tier 1, Tier 2, and Exposure Control. Within a given land use, sites will fall into a range of sensitivities because of differences in receptors and site conditions. Tier 1 remediation guidelines are generic; that is, they are developed to protect sites at the more sensitive end of the range and can therefore be used at most sites without modification. The Tier 2 approach allows the consideration of site-specific conditions through the modification of Tier 1 guidelines and/or removing exposure pathways that may not be applicable to the site. Exposure Control involves risk management through exposure barriers or administrative controls based on site-specific risk assessment. These management options are described in more detail in Section 3.

The Tier 1 approach is based on the assumption that all exposure pathways and receptors relevant to a particular land use are actually present. At Tier 1, exposure pathways that are part of the generic scenario for the applicable land use may not be screened out. Under Tier 2 it may be possible to screen out certain exposure pathways and/or modify the Tier 1 guidelines on the basis of site conditions. These options are discussed further in Sections 3 and 5, and in *Alberta Tier 2 Soil and Groundwater Remediation Guidelines* (AENV, 2007a).

## 1.2 Tier 1 and Tier 2 Levels of Protection

The objective of the Tier 1 and Tier 2 soil and groundwater remediation guidelines is to deliver the same degree of human health and ecological protection, regardless of which option is used. The same protocols are used to develop both Tier 1 and Tier 2 guidelines. The two options differ in the amount of site-specific information used to develop the guidelines.

The Tier 1 remediation guidelines are simple tabular values that require minimal site information for their use. Conservative assumptions about soil and groundwater characteristics have been used to develop the Tier 1 guidelines to protect sites likely to be sensitive to contamination. In this way, less sensitive sites under the applicable land use are also protected. Some site information is needed to ensure that site conditions are adequately represented by the assumptions used to develop the Tier 1 guidelines. Those sites that may be more sensitive than conditions assumed in the Tier 1 guidelines are more appropriately dealt with under the Tier 2 approach.

Applying Tier 2 guidelines typically requires more information from the site than Tier 1 guidelines. This additional information allows the assessor to develop guidelines that are tailored to the particular characteristics of the site. When a site has characteristics that make it more sensitive than the Tier 1 assumptions, the resulting Tier 2 guidelines may be more restrictive than Tier 1 values. Sites which are less sensitive may have Tier 2 guidelines that are less restrictive than Tier 1 values, but which deliver the same level of human and ecological health protection because they are tailored to that specific site.

When adverse effects are evident, contaminants must be managed to alleviate adverse effects, regardless of whether a site meets Tier 1 or 2 remediation guidelines.

#### **1.3** Relationship to Other Guideline Documents

This document focuses on Tier 1 soil and groundwater remediation guidelines, the process used to develop them, and the manner in which they should be applied. The *Alberta Tier 2 Soil and Groundwater Remediation Guidelines* (AENV, 2007a) expands on the Alberta Environment three-tiered system of contaminated site management (summarized in Section 3 of this document) and, in particular, provides the detail needed to make Tier 2 adjustments to the Tier 1 guidelines.

The soil and groundwater guidelines in this document supersede the following guideline documents:

- Alberta Tier I Criteria for Contaminated Soil Assessment and Remediation (AEP, 1994)
- Alberta Soil and Water Quality Guidelines for Hydrocarbons at Upstream Oil and Gas Sites (AENV, 2001a); and
- Risk Management Guidelines for Petroleum Storage Tank Sites (AENV, 2001b).

The following documents contain additional information needed for the application of Tier 1 guidelines and should be used in conjunction with this document:

- Guidelines for the Remediation and Disposal of Sulphur Contaminated Solid Wastes (AEP, 1996);
- Surface Water Quality Guidelines for Use in Alberta. (AENV, 1999);
- Salt Contamination Assessment and Remediation Guidelines (AENV, 2001c);
- Soil Quality Guidelines for Barite: Environmental Health and Human Health (AENV, 2004);
- Assessing Drilling Waste Disposal Areas: Compliance Options for Reclamation Certification (AENV, 2007b)

- Canadian Environmental Quality Guidelines (CCME, 1999 and updates);
- Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Tier 1 Method (CCME, 2001); and
- Canadian Guidelines for the Management of Naturally Occurring Radioactive Materials (NORM) (Health Canada, 2000).

Two documents provide the protocols and the primary technical basis for the risk-based guidelines calculated in this volume:

- For all compounds except petroleum hydrocarbons: A Protocol for the Derivation of Environmental and Human Health Soil Quality Guidelines (CCME, 2006); and,
- For petroleum hydrocarbons: *Canada-Wide Standards for Petroleum Hydrocarbons (PHCs) in Soil* (CCME, 2007).

## 1.4 Ongoing Commitment

The Alberta Tier 1 Soil and Groundwater Remediation Guidelines is a living document. Alberta Environment is committed to updating the guidelines as new information and guidelines for new substances become available.

## 2. ALBERTA ENVIRONMENT POLICY ON CONTAMINATED SITE MANAGEMENT

This section provides an introduction to the guiding principles that underlie Alberta Environment policy on the management of contaminated soil and groundwater. These principles and the associated policy provide a framework for implementing the three contaminated site management options: Tier 1, Tier 2, and Exposure Control.

## 2.1 Pollution Prevention

Pollution prevention is a critical factor in maintaining a healthy environment. Alberta Environment policy strongly emphasizes the importance of proactive efforts that keep soil and groundwater clean and free of contaminants rather than relying on remediation after contamination has occurred. Remediation programs are often costly and, in the case of large and complex contaminant releases, may not be capable of fully restoring the quality of contaminated land or water, leading to a loss of land or water use options. Soil and groundwater contamination may be prevented or minimized by exercising care and control through:

- proper siting of facilities and chemical storage areas;
- secondary containment of potential contaminants;
- regular inspections and maintenance of tanks and pipelines;
- soil and groundwater monitoring programs;
- early source identification and removal or management; and,
- proper waste disposal and management.

## 2.2 Legislation

Two key acts, the *Environmental Protection and Enhancement Act* (Government of Alberta, 2006), and the *Water Act* (Government of Alberta, 2000) form the legislative basis of Alberta Environment's policies on the management of contaminated soil and groundwater.

## 2.2.1 <u>Environmental Protection and Enhancement Act</u>

Regulatory requirements related to substance release, remediation and reclamation are found in the *Environmental Protection and Enhancement Act* (EPEA). The purpose of the EPEA (Government of Alberta, 2006) is "to support and promote the protection, enhancement and wise use of the environment". The EPEA allows the Minister to establish guidelines and objectives.

#### Substance Release Provisions

The EPEA prohibits the release of substances in an amount that causes or may cause a significant adverse effect. "Release", "substance", and "adverse effect" are defined in

the EPEA. The release of a substance to the environment can occur rapidly (as in the rupture of a vessel containing the substance) or over a longer period of time (as with a gradual leak from an underground pipe that goes undetected). When a substance is released that causes an adverse effect or, for releases after Sept. 1, 1993, has the potential to cause an adverse effect, the release must be reported. Remedial measures must be implemented whenever a release causes, or has the potential to cause, an adverse effect. Additional guidance on release reporting can be found in *A Guide to Release Reporting* (AENV, 2005a) and *Informational Letter 98-1* (EUB, 1998).

#### **Remediation Certificates**

The EPEA authorizes the Director or inspector to issue remediation certificates where contaminated land has been remediated. While encouraging remediation of contaminated land, the remediation certificate also protects the responsible party from future environmental protection orders related to the remediated release.

#### **Conservation and Reclamation**

The EPEA includes requirements for the conservation and reclamation of specified land. Specified land is defined in the EPEA and the *Conservation and Reclamation Regulation* (Government of Alberta, 1993; C&R Reg.). The EPEA and the C&R Reg. require reclamation of specified land to equivalent land capability. Equivalent land capability is defined in the C&R Reg. With respect to soil contamination on specified land, the *Alberta Tier 1 Soil and Groundwater Remediation Guidelines* establish generic remediation guidelines for achieving equivalent land capability. Site-specific guidelines for achieving equivalent land capability.

## 2.2.2 <u>Water Act</u>

Water is a public resource, and is owned and regulated by the Government of Alberta. Regulatory requirements related to the management of water supplies and water quality (including groundwater quality) are found in the *Water Act* (Government of Alberta, 2000). The purpose of the *Water Act* is "to support and promote the conservation and management of water, including the wise allocation and use of water". The *Water Act* allows the Minister to establish guidelines for water management.

## 2.3 Principles of Contaminant Management

A contaminant is a substance that is present in an environmental medium in excess of natural background concentration (CCME, 2006). Three key elements of Alberta's framework for the management of contaminated sites are: source control, contamination delineation, and contaminant management, including remediation.

## 2.3.1 Source Control

A source of contamination is anything that adds contaminant mass to the environment. Source control is a necessary action in support of pollution prevention, a key outcome of Alberta's policy on contaminated site management. If there is evidence of soil or groundwater contamination, the source, if it is still present, must be identified. Sources must be removed or controlled as soon as practicable.

Contaminants can be introduced into the environment in a number of ways. Leaking pipelines and storage tanks are common sources of contamination. Contaminated soil and groundwater may be a source of contamination to other areas of a site if the contaminants are mobile. Removal or management of these sources is a necessary part of contaminated site management. Soil or groundwater with naturally elevated substance concentrations may become a source of contamination if it is redistributed and causes the receiving soil or water to exceed Tier 1 or 2 remediation guidelines. This can be avoided by proper characterization and handling of soil and groundwater prior to redistribution. Failure to control sources allows contaminants to spread, increasing risk and remediation costs, and potentially limiting future land use if remediation to Tier 1 or 2 guidelines is not possible.

Where complete source removal is not feasible, the source must be removed to the extent possible and treatment, control, and/or management measures must be implemented to address the residual source. Treatment measures will assist in the ongoing reduction of source contaminant concentrations. Source control measures must prevent the contaminant from spreading to adjacent areas, causing the soil or groundwater there to exceed Tier 1 or 2 guidelines.

If source control measures are required, they must operate until the source meets Tier 1 or Tier 2 remediation guidelines. Source control must be supported by a monitoring program that demonstrates its efficacy.

Where source control rather than source remediation is implemented, a site is considered to be managed through an Exposure Control approach rather than a Tier 1 or Tier 2 approach.

#### 2.3.2 Delineation

When soil or groundwater is found to contain contaminants in excess of Tier 1 or 2 soil or groundwater remediation guidelines, a delineation program must be implemented. The delineation program must identify both the horizontal and vertical extent of contaminant concentrations exceeding the Tier 1 guidelines or the Tier 2 guidelines derived by the pathway exclusion approach (Section 5.2 and Table 5 in AENV, 2007a). Adequate delineation provides information needed to support appropriate decisions about contaminant remediation and management. Delineation programs must be extensive enough in both horizontal and vertical directions to allow all applicable exposure pathways and receptors to be properly assessed. Delineation is complete when measured concentrations are less than Tier 1 or 2 remediation guidelines. Complete delineation can be accomplished prior to undertaking remediation or when confirmatory samples are taken to show that remediation is complete.

#### 2.3.3 Contaminant Management

When the volume of soil or groundwater containing contaminant concentrations that exceed Tier 1 or 2 guidelines is completely delineated, a plan must be developed to remediate or otherwise manage the contaminants in a manner that is consistent with the framework outlined in Section 3.

#### 2.3.4 Management of Contaminants in Subsoil

In general, Alberta Tier 1 surface soil remediation guidelines apply to all soil and groundwater, regardless of depth. However, subsoil guidelines for salinity and petroleum hydrocarbons may be used at Tier 1 under the following circumstances:

#### <u>Salinity</u>

Topsoil guidelines for electrical conductivity and sodium adsorption ratio must be applied to the L, F, H, O, and A horizons (Soil Classification Working Group, 1998) or equivalent surficial material where these horizons are not present. Subsoil guidelines may be applied below the A horizon or equivalent in lieu of topsoil guidelines. Further information is available in the *Salt Contamination Assessment and Remediation Guidelines* (AENV, 2001c).

#### Petroleum Hydrocarbons

Surface soil guidelines for petroleum hydrocarbon fractions F1 to F4, benzene, toluene, ethylbenzene, and xylenes must be applied to a depth of 1.5 metres. Subsurface guidelines may be used as follows:

- Below 1.5 metres in depth within a 5 metre setback from an oilfield wellhead (see Municipal Affairs and Housing Advisory Land Use Planning Notes on Abandoned Wellsites), or
- below 3 metres in depth at any site.

The Tier 1 approach allows the exclusion of the ecological direct contact pathway for soil and groundwater for petroleum hydrocarbon fractions F1 to F4 for any land use below a depth of 3 metres. All other exposure pathways apply. Consistent with the *Canada-Wide Standard for Petroleum Hydrocarbons in Soil* (CCME, 2007), exclusion of the ecological direct soil contact pathway is permitted below 3 metres with the application of "management limits" for petroleum hydrocarbon fractions that represent maximum concentrations that apply at any depth. Management limits for petroleum hydrocarbon fractions F1 to F4 are noted in Appendix A.

#### 2.4 Soil Protection in Alberta

Soil is a resource that supports important ecosystem functions. As a society, we rely on our soil resources to supply food and fibre, purify water, degrade waste materials, maintain healthy forests and grasslands, and provide a structural foundation for urban and rural buildings and infrastructure. As stewards of our soil resource, we have a responsibility to manage our activities in a way that sustains the ecological functions of soil. At sufficient concentrations, soil contamination can impair the ability of soil to support important ecosystem functions as well as pose risks to human health. Care must be taken to prevent soil contamination and, when a substance release occurs, prompt actions must be taken to remediate or otherwise manage the release. Maintenance of good soil quality will ensure that soil fulfills its ecological role and will maintain our land use options as Alberta continues to grow and diversify.

## 2.4.1 Using Tier 1 Soil Remediation Guidelines

The goal of the Tier 1 soil remediation guidelines is to provide numerical targets for remediation of contaminated soil. To ensure consistency with "pollution prevention", a key outcome of Alberta's contaminated sites management framework, the Tier 1 soil remediation guidelines are **not** "pollute-up-to" levels. Sources must not be left uncontrolled until cumulative releases result in an exceedance of Tier 1 or Tier 2 soil remediation guidelines. This results only in further contamination, increased remediation costs, and potential loss of land use options. Source control is a crucial component of pollution prevention.

## 2.4.2 Background Soil Quality

The background concentration of a substance in soil is the natural concentration of that substance in the absence of any input from anthropogenic activities or sources. In some situations, the background concentration of some substances can be a significant proportion of, or even exceed, the Tier 1 guidelines. In cases were the natural background is demonstrated to be greater than Tier 1 guidelines, the remediation level shall be to natural background or to guidelines developed using Tier 2 procedures.

Background concentrations will vary with soil parent material, soil depth, and hydrologic regime. These factors lead to spatial variations in background concentrations that may or may not be predictable. To gain a good understanding of background conditions at a site, it is necessary to take sufficient representative samples from soils with similar characteristics to the affected site, but which are taken from outside the area affected by contamination. Sample depth and landscape position, soil profile characteristics and parent material should be recorded for all samples.

Care should be taken to distinguish between apparent background concentrations that are the result of diffuse anthropogenic sources, and true, natural background conditions. In comparing against background, emphasis should always be placed on ensuring that anthropogenic sources are not identified as natural background.

## 2.4.3 Land Use

Potential receptors and their exposure to soil contaminants are affected by land use. For example, workers on an industrial site experience a different exposure than a toddler living on a residential property. Different ecological receptors are found in a forest setting than on an urban commercial property. Tier 1 soil remediation guidelines are calculated for five types of land use: natural areas, agricultural, residential/parkland,

commercial, and industrial. These land use types may not correspond exactly to the range of municipal zoning options, but by evaluating the types of receptors and exposure conditions used in calculating the guidelines for each land use scenario, it is possible to identify which land use scenario is protective for a particular municipal zoning requirement. Assessors must determine the full range of uses allowed under the applicable zoning bylaw when determining the appropriate land use for Tier 1 application. Where a municipal zoning decision incorporates more than one land use scenario, the most conservative land use must be applied. More detailed guidance on land use may be found in Section 3.2.

In some cases, a contaminated site may be adjacent to a property with a more sensitive land use. Even though contaminant concentrations may meet appropriate guidelines for the less sensitive land use, mobile substances may migrate to the adjacent property at concentrations that exceed guidelines for the more sensitive land use. This is a particular risk for the vapour inhalation pathway and the groundwater direct ecological contact pathway. When a contaminated site is bordered by a more sensitive land use, the vapour inhalation guidelines (soil and groundwater) and the groundwater direct ecological contact guideline for the more sensitive land use apply to the contaminated site anywhere within 30 m of the more sensitive property boundary (see Figure 1).

## 2.4.4 Relationship to Air and Water Quality

Soil contamination interacts with air through volatilization and with water through dissolution and leaching to groundwater or runoff to surface water. Mobile soil contamination that is adding contaminant mass to air or water, is automatically considered a source. Therefore it must be remediated, or the contaminant release from the soil must be controlled as noted in Section 2.3.1.

For all land uses except natural areas, the Alberta Tier 1 soil remediation guidelines include soil concentrations that have been developed to protect indoor air quality. When soil contaminant concentrations exceed the soil remediation guideline protective of indoor air, then management of this exposure pathway is required.

The Alberta Tier 1 soil remediation guidelines also include soil concentrations that have been developed to protect groundwater quality. When soil contaminant concentrations exceed the soil remediation guideline protective of any groundwater-governed pathway (e.g., protection of potable groundwater for drinking water, protection of groundwater for freshwater aquatic life, or other groundwater pathways), then an investigation of groundwater quality is generally required unless the groundwater pathway can be excluded under a Tier 2 approach (see AENV, 2007a). A groundwater quality investigation is also strongly recommended when contaminant concentrations in soil are close to the groundwater protection guidelines because the presence of preferential flow paths can result in contaminants reaching groundwater even when general soil conditions appear not to pose a risk. It is also possible that mobile substances have leached out of the vadose zone into groundwater if sufficient time has elapsed since the release event.

#### 2.4.5 <u>Relationship to Land Application of Organic Materials, Industrial By-</u> <u>Products and Pesticides</u>

The *Industrial Release Limits Policy* (AENV, 2000) specifies that substances regulated by Alberta Environment should be managed to prevent soil contamination. Under this policy, Alberta's approach to the management of wastes, industrial byproducts, composts, and other materials is based on the potential to improve soil quality. Wastes that provide no benefits to soil quality must not be applied to land in a manner that causes soil contamination. Industrial byproducts, composts, and other materials that provide a potential benefit to soil quality may be applied to land according to good agronomic or forestry practices and in accordance with any other regulatory requirements. Even when benefits can be shown, any potential contaminants in the byproduct must be managed to prevent their buildup in soil to concentrations that exceed Tier 1 or Tier 2 guidelines. Soil is a biologically active medium and is sometimes used as a treatment medium for soil contaminated by biodegradable substances. Land treatment of soil contaminated by gasoline, diesel fuel, jet fuel and kerosene is allowed if registered in accordance with the Code of Practice for Land Treatment of Soil Containing Hydrocarbons (AENV, 2005b).

Tier 1 guidelines are used to evaluate chemical concentrations in soil. They can also be used to evaluate chemical concentrations resulting from the mixing of industrial byproducts or organic materials into soil. They should not be used to evaluate concentrations in the by-product or organic material itself, unless the material will be placed directly on land without being mixed with soil.

Tier 1 pesticide guidelines have been developed for a limited number of exposure pathways for which sufficient information is available. These values are intended for use in the remediation of pesticide contaminated sites and not for restricting pesticide use in accordance with registered application rates.

Disposal and treatment of wastes generated by the upstream oil and gas industry are regulated by the Alberta Energy and Utilities Board in accordance with Directive 50, *Drilling Waste Management* (EUB, 1996a) and Directive 58, *Oilfield Waste Management Requirements for the Upstream Petroleum Industry* (EUB, 1996b). Directive 50 Equivalent Salinity Guidelines (AENV, 2007b) can be used to assess and remediate drilling waste disposal areas for reclamation certification.

## 2.5 Groundwater Protection in Alberta

## 2.5.1 Alberta's Initiatives to Protect Water Resources

Water is a public resource, and is owned and regulated by the Government of Alberta. Alberta is facing pressures on its water resources as a result of population growth, drought, and agricultural and industrial development. In response to these stresses, the Alberta Government in collaboration with Albertans developed *Water for Life: Alberta's Strategy for Sustainability* (Government of Alberta, 2003). *Water for Life* is a comprehensive strategy for addressing water management concerns for the future that emphasizes knowledge and research, partnerships, and water conservation. The

protection of groundwater and surface water quality is a key element in the *Water for Life* approach.

The three primary goals of *Water for Life* are ensuring:

- a safe, secure drinking water supply,
- healthy aquatic ecosystems, and
- reliable, quality water supplies for a sustainable economy.

Groundwater has many beneficial uses and an important role in drinking water, the economy and supporting healthy aquatic ecosystems. Approximately 25 percent of Alberta's population depends on groundwater, and groundwater is used in a wide variety of industrial and commercial activities. Groundwater discharges into surface water bodies, such as rivers and wetlands, supporting aquatic ecosystems. Because groundwater and surface water are integrally connected, groundwater cannot be managed in isolation from surface water and aquatic ecosystems.

A key element of *Water for Life* is the protection of water resources. In the protection of groundwater quality, the strongest emphasis is placed on preventing groundwater resources from becoming contaminated. However, where contamination of this valuable public resource has resulted in an exceedance of Tier 1 or Tier 2 guidelines, it must be remediated or managed to ensure on-going protection of human health and the environment, and the restoration of beneficial uses.

This document provides guidance for managing contaminated groundwater in Alberta, and provides risk-based remediation guidelines to indicate when groundwater quality has been restored to an acceptable level.

## 2.5.2 Protection of Domestic Use Aquifers

Groundwater for domestic use is a significant current and future resource distributed over large geographic ranges in Alberta. Consequently, there is a need to protect the quality of Domestic Use Aquifers (DUAs).

The definition of a DUA is dependant on the amount of water an aquifer can produce, rather than the quality of the water in the aquifer, recognizing that technological treatment methods exist that can reduce or remove natural background substances. Furthermore, an aquifer does not have to be currently used for domestic purposes in order to be classified as a DUA, as the intent is to define and protect these aquifers for current and future use. Alberta Environment may consider any body of groundwater above the Base of Groundwater Protection<sup>1</sup> that is capable of a sufficient yield of water to be a DUA.

<sup>&</sup>lt;sup>1</sup> The Base of Groundwater Protection is the depth above which groundwater is naturally non-saline, having a natural concentration of total dissolved solids that is less than or equal to 4000 milligrams per litre. Information on the Base of Groundwater Protection is available from the Alberta Geological Survey.

For the purpose of selecting and applying a groundwater guideline for human health protection by ingestion, a DUA is defined as a geologic unit (either of a single lithology or inter-bedded units) that is above the Base of Groundwater Protection having one or more of the following properties:

- A bulk hydraulic conductivity of  $1 \times 10^{-6}$  m/s or greater and sufficient thickness to support a sustained yield of 0.76 L/min or greater; or
- Is currently being used for domestic purposes; or
- Any aquifer determined by Alberta Environment to be a DUA.

While it is possible that peat deposits and muskeg may meet the definition of a DUA, based on hydraulic conductivity and unit thickness, Alberta Environment does not consider peat deposits or muskeg to be a DUA because groundwater in them is unlikely to be used as a domestic source.

The DUA drinking water pathway **cannot** be excluded under the Tier 1 Guideline approach. However, using the Tier 2 Guidelines, it is possible to screen out the DUA drinking water pathway under certain circumstances, such as if an isolating geologic unit meeting specific properties is present, or if the only reason a geologic unit meets the definition of a DUA is the presence of a shallow large diameter well. For more information on the criteria for screening out the DUA drinking water pathway, refer to the *Alberta Tier 2 Soil and Groundwater Remediation Guidelines* (AENV, 2007a).

## 2.5.3 Using Tier 1 Groundwater Remediation Guidelines

The goal of the Alberta groundwater remediation guidelines is to provide numerical targets for the remediation of contaminated groundwater. To ensure consistency with "pollution prevention", a key outcome of Alberta's framework for contaminated sites management, the Tier 1 groundwater remediation guidelines are **not** "pollute-up-to" levels. Sources must not be left uncontrolled until cumulative releases result in an exceedance of Tier 1 or Tier 2 groundwater remediation guidelines. This results only in further contamination, increased remediation costs, and potential loss of water use options. Source control is a crucial component of pollution prevention.

## 2.5.4 Background Groundwater Quality

The background concentration of a substance in groundwater is the natural concentration of that substance in a particular groundwater zone in the absence of any input from anthropogenic activities or sources. In some situations, the background concentration of some substances can be a significant proportion of, or even exceed the Tier 1 remediation guideline. Remediation of groundwater to below background conditions is not feasible and is not required. Accordingly, it is important to have a good understanding of background groundwater conditions at a site. Background concentrations will be specific to the groundwater zone being considered, and will vary both spatially and temporally. To gain a good understanding of background conditions at a site it is necessary to consider groundwater quality data from several monitoring wells installed in the zone of interest, located up- or cross- gradient from any contaminant sources. The more time-series data that are available, the better the understanding of background conditions will be.

Care should be taken to distinguish between apparent background concentrations that are the result of diffuse anthropogenic sources, and true, natural background conditions. In comparing against background, emphasis should always be placed on ensuring that anthropogenic sources are not identified as natural background.

## 2.5.5 <u>Relationship to Soil, Air and Surface Water</u>

Environmental media are interconnected. Contaminants in soil may leach into pore water or groundwater. Volatile compounds in groundwater may volatilize at the water table and can migrate through the soil into the interior space of buildings above. Soluble contaminants in groundwater can be transported laterally with the groundwater flow, and potentially enter a surface water body (creek, slough, lake, etc.) at the point of groundwater discharge.

Alberta Tier 1 groundwater remediation guidelines are developed to protect indoor air quality, plants and soil invertebrates, and water quality for a range of uses. Guidelines to protect a particular water use are calculated based on the corresponding water quality guideline (drinking water, aquatic life, irrigation, or livestock or wildlife watering).

## 2.5.6 Points of Compliance

For the purpose of this document, a point of compliance is the spatial location in an aquifer at which a groundwater quality guideline must be achieved to protect human and ecological receptors, to protect a groundwater resource, or to meet other conditions such as industrial use or groundwater management guidelines.

At one extreme, the compliance point could be established at the point of exposure such as a drinking water well (human-ingestion) or a river (ecological-aquatic life). However, this would imply that there could be deterioration in the quality of the groundwater between the contaminant source and the receptor, which could be judged unacceptable in terms of legislative requirements and/or restriction of potential future use of a groundwater resource. At the other extreme, a precautionary approach could set the groundwater compliance point directly beneath the contaminant source. This is likely to result in a more stringent remedial target concentration and may be unnecessary, as certain exposure pathways may be irrelevant at that particular location, the contaminated groundwater may never reach a receptor, or contaminants may be significantly attenuated in groundwater prior to reaching the exposure point. To address both conditions, some fundamental principles are used to guide decisions for setting groundwater remediation guidelines and compliance points on individual sites in Alberta.

A DUA, as defined in Section 2.5.2, is an important current and future groundwater resource and must be protected to the maximum extent possible. The compliance point for the human health water ingestion pathway is everywhere within a DUA.

Groundwater aquifers can be an important current or potential future agricultural groundwater resource used for livestock watering and irrigation. For livestock watering, the compliance point is everywhere within the relevant livestock watering aquifer existing below agricultural or other grazing land. For irrigation, the compliance point is everywhere within the irrigation-use aquifer, where applicable.

Ecological receptors must be protected at key exposure points. For aquatic life or wildlife receptors, the minimum point of compliance is at the point of groundwater discharge into a surface water body that is capable of supporting an aquatic ecosystem. Groundwater guidelines are calculated to achieve this. Therefore, the groundwater at all points of groundwater discharge immediately adjacent to the aquatic water body must meet the aquatic surface water quality guideline. For terrestrial receptors (plants and soil invertebrates), the point of compliance is everywhere within the shallow groundwater zone (i.e. the extent of groundwater less than 3 m below ground surface) and at the point of ground surface discharge.

## 3. ALBERTA FRAMEWORK FOR THE MANAGEMENT OF CONTAMINATED SITES

#### 3.1 Implementation Framework and Management Levels

The general framework for the management of contaminated sites in Alberta has three options and is illustrated by the flowchart presented in Figure 2. A more detailed framework specific to site management under the Tier 1 approach is presented in Figure 3. A brief description of the framework is provided below; a detailed discussion of the management and technical aspects of the Tier 1 guidelines is presented in subsequent sections of the document.

Under the Alberta framework, three options are provided for the management of contaminated sites as the proponent proceeds from initial site assessment to regulatory closure. The three options are:

- Tier 1 generic remediation guidelines.
- Tier 2 site-specific remediation guidelines based on the modification of Tier 1 guidelines.
- Exposure Control risk management through exposure barriers or administrative controls based on site-specific risk assessment.

Regardless of the option chosen, the target level of human health and ecological protection afforded by Tier 1, Tier 2, or Exposure Control is the same.

As discussed below, regulatory closure is available for sites managed to achieve Tier 1 and Tier 2 remediation guidelines. This means that no conditions are imposed on future use of the site, within a given land use. The three management options are briefly described in the following paragraphs:

#### **<u>Tier 1 – Generic Remediation Guidelines</u>**

Generic guidelines are based on identification of the receptors to be protected under various land uses, the applicable exposure pathways, and a corresponding set of parameters that allow reasonably conservative predictions of risk at sites throughout Alberta. Whenever possible, models that incorporate toxicity information, receptor characteristics, and fate and transport mechanisms are used to derive Tier 1 guidelines. Risk-based assessments have not been completed for fluoride, sulphur, antimony, beryllium, boron, cobalt, molybdenum, silver, and tin. The Tier 1 guidelines for these compounds are based on professional judgment. Other compounds have been evaluated for only a limited number of exposure pathways. Where site assessments identify the presence of other influential exposure pathways related to these substances, Tier 2 guidelines may need to be developed.

Tier 1 guidelines are expected to be applicable to the majority of contaminated sites in Alberta, although site managers may choose a Tier 2 approach to incorporate more site information in the development of remediation guidelines. There may be some situations

where site conditions result in a *more* sensitive scenario than is captured by the conservative generic scenarios (e.g., a site underlain by very coarse sand and gravel with a high hydraulic conductivity). Information on situations where Tier 1 is not applicable is provided in Section 5.1.6. In such cases, a Tier 2 or Exposure Control approach will be required. Where the Tier 2 approach is required under section 5.1.6, it can be restricted to the specific pathway/receptor relationships that are in question. Even at sites that eventually use a Tier 2 or Exposure Control approach, Tier 1 guidelines are normally used for an initial screening as the first step in a phased site assessment.

The Tier 1 process comprises an initial site assessment and characterization followed by the selection of the applicable Tier 1 guidelines. If feasible and appropriate, remediation management to Tier 1 guidelines will be undertaken. When a proponent believes Tier 1 remediation management is not feasible and/or appropriate, the proponent may proceed to the Tier 2 process or, in some cases, to Exposure Control. The use of Tier 1 guidelines is described further in Section 5.

## **Tier 2 - Modified Generic Remediation Guidelines**

There may be circumstances where site-specific conditions modify potential human and ecological exposure, relative to the generic conditions used to derive Tier 1 guidelines, such that the generic guidelines are unnecessarily conservative. Alternatively, site-specific conditions may increase risks to a level that renders a Tier 1 approach unacceptable. Accordingly, guidance is provided in the companion Tier 2 document (AENV, 2007a) on ways in which Tier 2 guidelines can be developed. The Tier 2 guidelines will normally be determined by screening out exposure pathways that are not present or by adjusting the Tier 1 models using site-specific values for certain parameters. In either case a more detailed site assessment will be required. Other approaches to calculating Tier 2 guidelines may be allowable, as long as they do not require any form of engineered, administrative, or other exposure control.

Sites where major adjustments to parameters or models are needed may require sitespecific ecological risk assessment and/or human health risk assessment to develop appropriate remediation objectives. Quantitative risk assessment is a complex process with intensive data requirements. Complex risk assessments that do not require restrictions to the typical activities considered under a given land use and do not require ongoing risk management may be acceptable for regulatory closure under the Tier 2 process. However, these sites may have additional assessment, monitoring, and/or regulatory requirements that are beyond the scope of this guidance document.

#### **Exposure Control - Risk Management**

Exposure Control relies on ongoing risk management to control risks to human health and the environment. This management option is used for sites that require restrictions to the typical activities considered under a given land use or require ongoing risk management.

#### 3.2 Land Use Definitions

For the purpose of developing and implementing soil and groundwater remediation guidelines in Alberta, five generic land uses have been defined - natural areas, agricultural, residential/ parkland, commercial and industrial. A generic land use scenario is envisioned for each category based on typical activities on these lands. The five land uses are defined for the purpose of this document only. Where allowable land uses, as defined by a given jurisdictional authority, differ from those noted here, an assessment of allowable receptors and potential exposure pathways must be made to ensure consistency with assumptions based on definitions here. Where a more sensitive receptor or exposure pathway is allowed, the more sensitive land use description must be used in selecting the appropriate Tier 1 guidelines. Assessors must determine the full range of uses allowed under the applicable zoning bylaw when determining the appropriate land use for Tier 1 application. For most sites in Alberta, one of the five generic land use scenarios should be applicable. If none of the generic land uses are applicable, a site-specific Tier 2 approach will be required. The five land uses are defined as follows:

#### Natural Areas

Natural areas are defined as being away from human habitation and activities, where the primary concern is the protection of ecological receptors. Accordingly, human exposure pathways are not considered, with the exception of the protection of groundwater for drinking water pathway that, based on the definition of a DUA (Section 2.5.2), applies in all land uses. Much of Alberta's forested land will fall into natural areas land use. Forested lands that are specified as grazing leases represent a special case that requires an amendment to the normal exposure scenario for natural areas. On such grazing leases, the livestock soil ingestion and protection of groundwater for livestock pathways must be addressed in addition to the regular pathways considered under natural areas land use. Natural areas land use must not be applied to areas that may reasonably be expected to be developed, such as those near municipalities and permanent dwellings.

#### **Agricultural Lands**

On agricultural land the primary land use is growing crops or tending livestock as well as human residence. This also includes agricultural lands that provide habitat for resident and transitory wildlife and native flora. To allow unrestricted future use of the land, a farm residence is assumed to be present anywhere on agricultural land.

#### **Residential/Parkland**

The primary activity on residential/parkland is residential or recreational activity. This land use includes campground areas and urban parks, but not wildlands in provincial parks, which are considered natural areas. Where urban parks are frequented by wildlife, wildlife exposure pathways should be addressed.

#### Commercial Land Use

On commercial land, the primary activity is commercial (e.g., shopping mall) and all members of the public, including children, have unrestricted access. Commercial land use includes day-care centres, buildings for religious services, hospitals, and medical centres. Commercial land does not include operations where food is grown directly in impacted soil on the site. Such operations would fall under agricultural land use.

## Industrial Land Use

Industrial land is land where the primary activity is the production, manufacture or construction of goods. Public access is restricted and children are not permitted continuous access or occupancy.

## 3.3 Groundwater and Surface Water Use Definitions

Soils are hydrologically linked to groundwater and surface water systems. One of the objectives of Alberta's soil remediation guidelines is to manage soil-to-groundwater pathways to prevent unacceptable transfer of contaminants from the soil, which may ultimately affect groundwater and surface water use. Alberta's groundwater and surface water quality guidelines are representative of allowable chemical concentrations in groundwater or surface water at the point of compliance (see Section 2.5.6).

Alberta guidelines have been developed for four generic uses of groundwater or surface water affected by groundwater discharge:

- human consumption (potable water);
- aquatic life;
- livestock and wildlife watering; and,
- irrigation

These water uses are linked to land uses through the definitions of the generic land use categories. Other water use categories, for example recreation, as well as variations in water use within a defined land use category, may be addressed using the Tier 2 process.

## 3.4 Conditions and Restrictions Associated with Tier 2 and Exposure Control

The Alberta soil and groundwater remediation guidelines and implementation framework are intended to provide the same high level of protection of human health and the environment at all levels or tiers of site management. For Tier 1, this is ensured by the use of relatively conservative assumptions in the derivation of the risk-based numerical guidelines, such that the values can be applied to the large majority of sites within a land use category without condition or restriction. In other words, the normal activities associated with a particular land use are protected without the need for ongoing management of the site or of contaminants which may be present. Alberta Environment will provide regulatory closure for a site complying with the Tier 1 guidelines, unless site conditions are unsuitable for their application (see section 5.1.6).

Management under Tier 2 guidelines delivers the same level of health and environmental protection by incorporating site-specific data into the development of appropriate remediation guidelines. Sites remediated to Tier 2 guidelines are eligible for regulatory closure.

Certain types of site-specific data or assumptions dictate the need for ongoing site management to ensure that the assumptions used to assess human and ecological risks or to develop site-specific objectives remain valid. Ongoing management of a site, or of the contaminants present, will generally invoke a land use restriction or condition that will preclude regulatory closure. Therefore site-specific adjustments or assumptions that would trigger ongoing management requirements can only be implemented under the Exposure Control option.

To avoid the need for ongoing management and, hence, possible conditions and land use restrictions. Tier 2 adjustments are usually limited to parameters that are measurable and stable, such as soil properties, geological conditions, hydrogeology and distances to natural surface water bodies. Tier 2 assessments that involve full site-specific risk assessment using models and assumptions that may differ from those used in the calculation of the Tier 1 guidelines may be accepted provided they do not require any form of ongoing risk management. Parameters that are unique to current site use, an existing development or the location of a receptor, such as the characteristics of a site building or the distance to a water well, may change in the future thereby invalidating the site-specific assumptions. Adjustments of such parameters is not allowed at Tier 2. In some cases exposure pathways may be inoperative under a particular site use (e.g. direct human or ecological contact with contaminated soil at a commercial site that is paved or capped) or the frequency of exposure may differ from the generic assumptions. Preservation of these conditions would require ongoing management; therefore these adjustments cannot be made at Tier 2. Further guidance on parameters and assumptions eligible for adjustment at Tier 2 is provided in the companion Tier 2 document (AENV, 2007a).

#### 4. SCIENTIFIC BASIS FOR DEVELOPING TIER 1 REMEDIATION GUIDELINES

#### 4.1 Risk-Based Guidelines

Risk-based guidelines are developed with the understanding that for risk from chemical contamination to exist, all of the following elements must be present:

- the substance must possess toxic properties;
- the substance must be present in the environmental medium of concern (soil or groundwater);
- a receptor must be present (human, livestock, crop, or ecological receptor); and,
- there must be an exposure pathway through which the substance can reach the receptor and be taken in to the receptor's body.

Risk-based guidelines are then calculated by first determining the amount (dose or concentration) of substance to which a receptor can be safely exposed. Next, for each exposure pathway, a conservative estimate is made of a concentration of the substance in soil or groundwater that will protect the receptor from exposure exceeding the safe amount. These substance concentrations are referred to as risk-based guidelines and represent remediation objectives for the protection of human and ecological health on contaminated sites.

#### 4.1.1 Steps in the Development of Tier 1 Risk-Based Guidelines

The steps in the development of the risk-based guidelines in Tables 1, 2 and 3 are as follows.

- 1. Identification of the potential receptors and the potential exposure pathways through which contaminants can come into contact with receptors (e.g., humans or ecological receptors such as livestock, crops, and wildlife).
- 2. Identification of appropriate protection endpoints for each exposure pathway/receptor combination.
- 3. Calculation of a substance concentration in soil and/or groundwater (guideline) for each exposure pathway that offers a safe level of protection.
- 4. Determination of an overall Tier 1 risk-based guideline for soil and/or groundwater by selecting the lowest of the guidelines calculated for all relevant exposure pathways.

The remainder of Section 4 describes how these four steps were implemented in the development of the Tier 1 soil and groundwater remediation guidelines. The details of the calculations used in Step 3 are provided in Appendix C.

## 4.2 Protection of Human Health

#### 4.2.1 Human Receptors and Exposure Pathways

In establishing appropriate risk-based guidelines, the most sensitive user of a contaminated site must be considered and protected. The most sensitive receptor is normally a function of the degree of potential exposure, the exposure pathway(s) and the substance(s) of concern. For the application of Tier 1 and Tier 2 guidelines, the land use and contaminant characteristics will dictate the critical receptor. When developing Tier 1 and Tier 2 guidelines, people of all ages are assumed to be present on agricultural, residential/parkland and commercial land. At industrial sites, only employees are assumed to be routinely present, which precludes the exposure of children. Human receptors are assumed to be absent in natural areas, although underlying groundwater is considered to be a potential source of drinking water.

The following human exposure pathways are considered when developing and implementing Tier 1 and Tier 2 remediation guidelines (based on CCME, 2006). The exposure pathways are applicable to all land uses, except where noted below.

#### **Direct Contact**

Humans coming into direct contact with contaminated soil via incidental ingestion, dermal contact, or inhalation of air-born soil particles. Applicable to all land uses except natural areas.

#### Drinking Water

Humans drinking from and showering or bathing in water that is sourced from groundwater. Applicable to all land uses.

## <u>Inhalation</u>

Volatile contaminants being released from soil and/or groundwater and migrating upwards into living or working spaces where humans are exposed via inhalation. Applicable to all land uses except natural areas.

## **Off-Site Surface Migration by Wind or Water Erosion**

The soil quality guideline for commercial and industrial land use may be greater than the corresponding guideline for more sensitive land uses. Wind or water transport of contaminated soil from a commercial or industrial site onto an adjacent site with a more sensitive land use could potentially result in contaminant concentrations that exceed the human direct contact soil quality guideline applicable to the more sensitive land use. The off-site migration check is calculated to ensure that the commercial or industrial guidelines set are protective of this exposure pathway.

## 4.2.2 Human Health Protection Endpoints

The human health protection endpoint is the same at all tiers of management, and is expressed in terms of an allowable exposure level at which the likelihood of a receptor

experiencing adverse health effects is essentially negligible. Specifically, the level of human exposure to a threshold chemical (i.e., non-carcinogen) must not exceed the tolerable daily intake specified by Health Canada or other appropriate regulatory agency, including background exposure to the chemical. For a non-threshold chemical (i.e., carcinogen), the incremental lifetime cancer risk must not exceed 1 in 100,000 (1 x  $10^{-5}$ ), the value considered by Health Canada to be essentially negligible (Health Canada, 2004).

## 4.3 Ecological Protection

#### 4.3.1 Ecological Receptors and Exposure Pathways

Risk-based guidelines fulfill two main goals from the ecological standpoint: protection of ecological receptors expected to be present at a site based on land use, and preservation of an appropriate level of ecological function of the site and its ecosystem components.

Ecological receptors at a typical contaminated site, within the range of generic land uses considered in the development of the Alberta guidelines, span a range of trophic levels including soil-dependent organisms (plants, including crops, and soil invertebrates) and higher order consumers (terrestrial and avian wildlife and livestock). In addition, based on the potential for groundwater underlying a site to discharge to a surface water body that is capable of supporting an aquatic ecosystem, aquatic receptors including invertebrates, fish, and aquatic plants are considered. Receptors assigned to each land use for the purpose of guideline derivation must be both ecologically relevant to a site and sufficiently sensitive to be representative of the range of receptors normally present. In addition to the protection of ecological receptors *per se*, ecologically based guidelines must be protective of other processes such as nutrient cycling and related microbial activities.

The following ecological exposure pathways are considered in the determination and implementation of Tier 1 remediation guidelines where appropriate to the defined land uses (based on CCME, 2006).

## **Direct Contact**

Plants and soil invertebrates coming into direct contact with contaminants in soil or shallow (<3 m) groundwater. Applicable to all land uses.

## Nutrient and Energy Cycling

This exposure pathway examines the microbial functioning of the soil, including carbon and nitrogen cycling. Applicable to all land uses.

## Livestock/Wildlife Soil and Food Ingestion

Livestock or wildlife ingesting contaminants via the incidental ingestion of soil and ingesting contaminants that have bioaccumulated from soil into fodder. Applicable to agricultural and natural area land use only.

#### <u>Aquatic Life</u>

Aquatic life, including fish, aquatic invertebrates and aquatic plants, being exposed to contaminants when groundwater discharges to a surface water body that is capable of supporting an aquatic ecosystem. Applicable to all land uses.

#### <u>Irrigation</u>

Crops being exposed to contaminants when groundwater is used for irrigation. Applicable to agricultural land use only.

#### Livestock/Wildlife Watering

Livestock or wildlife being exposed to contaminants when groundwater is used for livestock watering, or groundwater discharges to a surface water body where wildlife may drink. Applicable to agricultural and natural area land use only.

## 4.4 Calculation of Guidelines

Soil remediation guidelines were calculated for each land use and soil texture using models consistent with the latest CCME (2006) protocols. In some cases, more recent deliberations of the Sub-Groups supporting the 2007 revision of the Petroleum Hydrocarbon Canada-Wide Standard (PHC CWS; CCME, 2007) have resulted in revisions to parameter values, and these revisions have been adopted in the current document. Parameter values were adapted for Alberta conditions and policies where appropriate. Groundwater remediation guidelines were calculated for each water use by adapting the models from the soil remediation guideline calculations, as appropriate. Details of all models and parameters used are provided in Appendix C.

## 4.5 Determination of Overall Guideline

Tier 1 guidelines are intended to be a conservative screening tool. The lowest of the guidelines (tabulated in Appendix A and B) calculated for applicable exposure pathways and the appropriate land use and soil texture is the overall Tier 1 remediation guideline (Tables 1, 2, and 3). At some sites, it may be possible to demonstrate that certain exposure pathway(s) are not relevant, and exclude the corresponding objective for those pathway(s) using a Tier 2 approach. Conditions for excluding particular exposure pathways are provided in the companion document describing Tier 2 procedures (AENV, 2007a).

#### 4.6 Integration of New and Existing Guidelines

New risk-based guidelines were calculated for a wide range of organic compounds in this document using the latest CCME (2006) protocols (in some cases modified based on the 2007 revisions to the PHC CWS) and adapted for Alberta conditions and policies (Tables 1, 2, and 3). Guidelines were not recalculated for inorganic compounds, except arsenic; existing risk-based guidelines were retained from Canadian Environmental Quality Guidelines (CCME, 1999 and updates). Existing guidelines for the soil ecological contact pathway and the soil and food ingestion pathway were also retained where they existed, or were recalculated in the case of soil ingestion guidelines for certain hydrocarbons. Soil remediation guidelines based on professional judgment were retained from previous guideline documents for antimony, beryllium, boron, cobalt, fluoride, molybdenum, silver, elemental sulphur, and tin because risk-based Alberta Tier 1 guidelines have not yet been developed for these substances. Guidelines for these substances were adopted from the Alberta Tier 1 Criteria for Contaminated Soil Assessment and Remediation (AEP, 1994) for natural areas, agricultural, and residential/parkland land uses. For commercial and industrial land uses, and for all uses if the substance was not included in AEP (1994), guidelines were adopted from the Interim Canadian Environmental Quality Criteria for Contaminated Sites (CCME, 1991). Soil remediation guidelines for electrical conductivity and sodium adsorption ratio (Table 4) were adopted from the Salt Contamination Assessment and Remediation Guidelines (AENV 2001c).

#### 5. USER GUIDANCE FOR TIER 1 MANAGEMENT

The process for implementing the Alberta Tier 1 soil and groundwater remediation guidelines is illustrated schematically by the flow diagrams presented in Figures 2 and 3. Detailed guidance for Tier 2 is provided in a companion document (AENV, 2007a) and is summarized herein.

As illustrated in Figures 2 and 3, Tier 1 management is divided into three stages: assessment, evaluation, and decision/management. These three stages are discussed in the following sections.

#### 5.1 Information Requirements for Tier 1 (Tier 1 Assessment)

#### 5.1.1 Overview of Requirements

A preliminary site characterization is required for all Tier 1 assessments. Site characterization must be comprehensive enough to adequately describe site conditions and address all assessment and management options within the scope of Tier 1.

The Tier 1 assessment may be more comprehensive and detailed, at the discretion of the proponent, providing additional information for potential use in developing Tier 2 guidelines. While there are advantages associated with a phased approach to site assessment, there may also be economies in combining data collection activities into a single investigation, particularly at locations where mobilization and demobilization costs are significant.

The minimum data requirements for a Tier 1 site assessment include:

#### Land Use and Sensitivity Factors

- site description;
- land use, including the full range of uses allowed under the applicable zoning bylaw;
- proximity of the site to surface water and drinking water supplies;
- actual and potential uses of groundwater;
- human receptors; and,
- ecological receptors.

## **Physical Conditions**

- soil particle size;
- stratigraphy and properties of surficial materials;
- depth to groundwater; and,
- presence and types of buildings and other structures.

#### **Contaminant Characteristics and Distribution**

- contamination characterization; and,
- horizontal and vertical extent of contamination.

The above information is generally required at all tiers, to a level of detail appropriate for the requirements of the evaluation and decision stages of each tier.

#### 5.1.2 Land Use and Sensitivity Factors

One of the objectives of the Tier 1 site assessment is to determine whether the site broadly fits any of the five generic land use categories. In this regard, the minimum data requirements for a Tier 1 assessment are as follows:

#### Site Description

The site description must include basic identifying data such as location and legal description, site dimensions, registered owner(s) etc., as well as a description of the physical surface expression of the site (surface topography), vegetative cover, nature of site development and, where applicable, site history.

#### Land Use

In determining land use, consideration must be given not only to present land use but also to historic and potential future land uses. Land use on private land is normally prescribed by the current and/or future zoning of the land and local development trends. Land use for public land is determined by the land manager who will use resource based input and tools such as land reservations and integrated plans as guidance. Attention must be given to all uses allowed under the applicable zoning bylaws and land use decisions.

Sufficient descriptive and legal or administrative information must be obtained to determine the generic land use category (natural areas, agricultural, residential/parkland, commercial, industrial) and whether the land use may be considered typical for the assigned category. The five generic land uses are defined and described in Section 3.2.

Land uses of adjacent or nearby properties must also be documented, as the presence of more sensitive off-site land uses may drive the site management requirements. Where a contaminated site on a less sensitive land use borders a more sensitive land use, the vapour inhalation guidelines (soil and groundwater) and the groundwater direct ecological contact guidelines for the more sensitive land use must be applied to the contaminated site within 30 m of the more sensitive land use boundary (see Figure 1).

#### **Proximity of Site to Surface Water and Drinking Water Supplies**

The assessment must document all existing and potential uses of groundwater and surface water, including their locations. The distance beyond which water uses are not significant or relevant depends on site-specific conditions but, as a minimum for Tier 1, water uses within 300 m should be identified. If the direction of groundwater flow has been reliably determined by site-specific groundwater monitoring, documentation of

water uses can be limited to 100 m upgradient and 300 m down gradient of the site. Flood risk areas should be taken into account when considering distance to surface water receptors. For more information see the companion Tier 2 document (AENV, 2007a).

The distance of 300 m was selected as being greater than the length of the majority of groundwater plumes of dissolved petroleum hydrocarbon. This value is based on studies of hydrocarbon plumes in the upstream oil and gas industry in western Canada undertaken by the Consortium of Research on Natural Attenuation (CAPP, 2002). The value of 300 m is also consistent with a compilation of 647 petroleum hydrocarbon plumes presented in Wiedemeier *et al.* (1999), in which it was determined that 98.1% of the plumes were less than 900 feet (274 m) long.

Water uses at greater distances must be considered on a case-by-case basis when subsurface conditions are such that adverse impact may be possible. For example, plumes of conservative soluble compounds that do not interact with the soil matrix, such as chloride, may travel farther than dissolved hydrocarbons (CAPP, 2002). Municipal water supply wells located more than 300 m from a site might be expected to be at risk from a contaminant source located anywhere within the zone of capture of the wells.

The assessment must recognize that, while the locations of most natural surface water bodies are essentially fixed, seasonal water bodies may exist at other locations, and anthropogenic groundwater uses could be initiated at any location relative to the site, in areas of usable groundwater.

#### Human and Ecological Receptors

In general, the presence of human receptors will be directly related to the land uses. However, sufficient information must be obtained to determine whether the land use is typical of the respective category, or whether receptors are present that would warrant a variation from the defined generic land use categories.

#### 5.1.3 Physical Conditions

Certain physical conditions and parameters must be determined to permit the implementation of Tier 1 management. The minimum physical data requirements are discussed below.

#### Soil Particle Size

As a minimum, since Tier 1 guidelines are prescribed for coarse-grained and fine-grained soils, sufficient particle size information should be obtained to permit classification of the soils as either coarse or fine. Fine-grained soils are defined as having a median grain size of less than or equal to 75  $\mu$ m; coarse-grained soils have a median grain size of greater than 75  $\mu$ m. The absence of sufficient particle size information will result in the default application of the more conservative Tier 1 guideline for each substance. Where both fine and coarse grained strata are present, the dominant soil particle size is determined by the stratum governing horizontal and vertical migration to a receptor.

#### **Soil Stratigraphy and Physical Properties**

Information on soil stratigraphy and physical properties is normally obtained by means of an intrusive subsurface investigation, although preliminary, qualitative information can often be obtained from other sources including published surficial geological information or the results of other subsurface investigations conducted in the area. In certain circumstances, it may be possible to apply the Tier 1 guidelines without a prior subsurface investigation. For example, the decision could be made to manage a spill of limited extent by removing all materials containing contaminant concentrations in excess of Tier 1 guidelines. Confirmation of the degree and extent of impact, as well as the subsurface investigations are commonly conducted to support the application of Tier 1 guidelines, in part for the purpose of contaminant characterization and site management planning.

The Tier 1 assessment must provide an overall description of the subsurface soil conditions and their vertical and lateral variability. Of particular importance is the uniformity of the soil particle size and the presence of any depositional or structural features, such as lenses or fissures, that could influence the fate and transport of certain chemicals in the subsurface. Where there are multiple geological deposits falling into both the coarse and fine definition such that the particle size dominating transport cannot be determined, the Tier 1 guidelines must default to the most stringent option.

## Hydrogeological Conditions

A hydrogeological investigation will normally form part of any subsurface investigation. Although soil guidelines have been developed to protect groundwater for various uses, care must be taken in using them to assess risk to groundwater at contaminated sites. Soils are heterogeneous. Variations in contaminant concentration and soil lithology and the presence of preferential flow paths can result in contaminants reaching groundwater even when general soil conditions appear not to pose a risk. It is also possible that mobile substances have leached out of the vadose zone into groundwater if sufficient time has elapsed since the release event. Alberta Environment strongly recommends that groundwater protection guidelines. The cost of installing groundwater monitoring wells can be minimized if they are installed when soil boreholes are drilled.

Information must be collected on depth to groundwater table, groundwater flow direction, hydraulic gradient and, with the appropriate field tests, hydraulic conductivity. While all of these parameters are influential, their quantitative determination is not required for the basic implementation of Tier 1, and qualitative information may be available from other sources. However, as with soil parameters, they can facilitate the decision between managing to Tier 1 guidelines or developing Tier 2 remediation guidelines or Exposure Control options.

For some substances, groundwater chemical characteristics are required for the development of a groundwater guideline. Where this applies, Table 2 references the

Surface Water Quality Guidelines for Use in Alberta (AENV, 1999) for further information on the chemical data required.

#### **Buildings and Other Structures**

When volatile substances are present, the site assessment must identify presence of buildings. When a building is not present, but the municipal zoning allows one to be built, its presence must be assumed. Site assessments must also consider the presence of structures, such as utility corridors and dirt basements, that may require a Tier 2 approach.

## 5.1.4 Contaminant Characteristics and Distribution

Requirements for site characterization to address all aspects for regulatory requirements or to characterize contaminants that are not included in the Tier 1 guideline process are beyond the scope of this document. It is the responsibility of the proponent to ensure that sufficient site characterization is carried out to address relevant regulatory requirements and to address any potential contaminants of concern not included in the Tier 1 soil and groundwater remediation guidelines. However, for the purposes of applying the Tier 1 guideline tables, the following general guidance can be given.

Sufficient characterization of the contamination must be conducted for the purpose of comparing contaminant concentrations with Tier 1 guidelines. This will normally comprise the collection and laboratory analysis of sufficient soil or groundwater samples to determine representative concentrations. As part of the Tier 1 assessment, the proponent must conduct sufficient sampling to delineate the lateral and vertical extent of impacted soil and groundwater. An exception is allowed where the contaminated soil is completely removed and confirmatory samples show compliance with Tier 1 guidelines. Whether delineating contamination or confirming remediation success, the data collected must be sufficient to support regulatory closure.

## 5.1.5 <u>Conditions Where Additional Exposure Pathways May Be Applicable</u>

There may be conditions where certain exposure pathways are applicable that would not normally be considered under a given land use. An example of this is a grazing lease within a natural area. In the case of such grazing leases, the livestock soil and food ingestion and protection of groundwater for livestock watering pathways apply in addition to the regular exposure pathways considered for that land use. Adding additional pathways to those typically considered for a land use may be done under the Tier 1 approach, provided no additional site information is needed for the additional pathway. Note that *removing* pathways that may not be applicable for a given land use from the pathways specified for the Tier 1 guidelines is *not* permitted, and may only be done under the Tier 2 approach.

## 5.1.6 <u>Conditions Where Tier 1 Guidelines Are Not Applicable</u>

Tier 1 guidelines are derived using relatively conservative default parameters and assumptions corresponding to the defined generic exposure scenarios and land use
categories. As such, they are intended and expected to be protective of human health and the environment in the large majority of cases. However, there may be situations in which Tier 1 guidelines are not applicable, either where conditions violate one or more assumptions essential to the validity of the modelling used in the Tier 1 derivation, or where actual exposure conditions or receptors at a site are more sensitive than in the generic exposure scenario.

Some examples of situations where Tier 1 guidelines are not applicable are highlighted below. These situations must be addressed through the Tier 2 process. The companion Tier 2 document (AENV, 2007a) should be consulted for further details.

#### Source of Volatile Contaminants Present Within 30 cm of a Building Foundation

Within this distance, the model used to assess vapour intrusion to buildings is not reliable, and Tier 1 guidelines are not applicable.

#### **Unusual Structural Features**

Building features such as earthen floors or unusually low air exchange rates are not considered in the Tier 1 model, and a Tier 2 approach is required. Where very coarse textured materials (see below) are found within utility corridors that are controlling contaminant migration, a Tier 2 approach is required.

#### **Groundwater Flow to Stagnant Water Bodies**

Additional consideration is required if groundwater at a site has the potential to discharge to a stagnant water body. A stagnant water body is defined as a water body without significant outflow, and where the main pathway of water loss is via evaporation. Stagnant water bodies will tend to concentrate discharging persistent groundwater contaminants through evaporation. Water bodies with no obvious or known outflow should be considered stagnant. If outflow is suspected via groundwater and no obvious surface outflow is present, a groundwater investigation will be needed to provide confirmation.

In the assessment of whether soil or groundwater contaminants are likely to have an adverse effect on a stagnant surface water body, the current concentrations of contaminants in groundwater are less important than the long-term effect on contaminant concentrations in the stagnant water body. Accordingly, when there is the potential for a contaminant in groundwater to discharge to a stagnant surface water body, a Tier 2 mass balance assessment of the likely concentrations of that contaminant in the stagnant water body over the anticipated lifetime of the groundwater discharge is required. The assessment should take into consideration, in a qualitative sense, the likelihood of other potential future contaminant releases to the stagnant surface water body. Unless the effect on contaminant concentrations in the stagnant surface water body can be shown to be insignificant, remedial action will be required.

#### Groundwater Within 10 m of a Surface Water Body

Tier 1 soil and groundwater remediation guidelines for the protection of aquatic life assume a minimum separation of 10 m between the point that the soil or groundwater concentration is measured, and the discharge point. Accordingly, Tier 1 guidelines only apply to soil or groundwater located at least 10 m from the nearest surface water body that is capable of supporting an aquatic ecosystem. Within this distance, a Tier 2 approach is required, or in the case of groundwater guidelines, the corresponding surface water freshwater aquatic life guideline may be applied directly to groundwater quality. The 10 m offset distance must take into account potential for seasonal fluctuations in the water level. This may require information on the flood risk area. For more information, see the companion Tier 2 document (AENV, 2007a).

#### Very Coarse Textured Materials Enhancing Groundwater or Vapour Transport

Groundwater velocity is a function of both hydraulic conductivity and hydraulic gradient and assumed to be  $1 \times 10^{-5}$  m/s and 0.028 m/m, respectively, for Tier 1 guideline derivation. The resulting Darcy groundwater velocity is 3 x  $10^{-7}$  m/s.

The rate of vapour transport through coarse soil is largely governed by vapour permeability which is assumed to be  $6x10^{-8}$  cm<sup>2</sup> for Tier 1 guideline derivation.

If the Darcy groundwater velocity exceeds  $3x10^{-7}$  m/s, or vapour permeability is greater than  $6x10^{-8}$  cm<sup>2</sup> at a site, a Tier 2 approach is required. In these cases, the Tier 2 guideline must incorporate groundwater or vapour inhalation as potentially dominant exposure pathway(s).

## Fractured Bedrock

The Tier 1 remediation guidelines were developed for unconsolidated soil material, therefore the presence of bedrock may require a Tier 2 re-evaluation. However, the guidelines may be applied to contaminants in contact with bedrock if the bedrock is likely to behave conservatively as one of the two soil textures. The actual texture of the bedrock material will often be less influential on contaminant movement than the degree of bedrock weathering and fracturing. Professional judgment must be applied in determining whether coarse or fine soil guidelines are the most appropriate, given the expected contaminant mobility within the bedrock. For instance, a weathered shale material may not automatically require a Tier 2 re-evaluation but it may require use of a coarse soil guideline due to the presence of minor fractures within the matrix.

Tier 2 re-evaluation is required where flow paths in the fractured bedrock cannot reasonably be expected to behave similarly to those in an aggregated soil medium. When the fracture length exceeds approximately 2 cm, flow paths in the fractured bedrock may be different than those in an aggregated soil medium. Under such conditions, groundwater transport in fractured bedrock is outside the scope of the calculations for Tier 1 guidelines and a Tier 2 or Exposure Control approach must be taken.

#### Source Length Greater than 10 m

The model used to develop Tier 1 guidelines for groundwater remediation and protection assumes a source of groundwater contamination that is 3m deep and 10m wide with a length of 10 m parallel to the direction of groundwater flow. Sources are discussed in Section 2.3.1 and include anything that adds contaminant mass to the environment. For the purposes of the groundwater transport model used to develop Tier 1 guidelines, the source length is relevant to sources that are releasing contaminants to groundwater. When the length of such a source is greater than 10 m parallel to the direction of groundwater flow, a Tier 2 approach is required unless the contaminant delineation shows that the source volume is less than 300 m<sup>3</sup>.

#### **Organic Soils**

When inorganic contaminants occur in organic soils, a Tier 2 approach is required. Organic soils are defined in *The Canadian System of Soil Classification* (Soil Classification Working Group, 1998). Coarse textured soil and groundwater remediation guidelines may be used for organic contaminants in organic soil.

#### 5.2 Identification of Appropriate Tier 1 Guidelines (Tier 1 Evaluation)

#### 5.2.1 Land Use and Water Use Conditions and Primary Soil Type

Land use and water use conditions are established on the basis of the information compiled for the Tier 1 assessment. Land use conditions are compared with the descriptions of the generic land use categories (natural area, agricultural, residential/parkland, commercial, industrial) to assign the site to the most sensitive applicable category. In some instances municipalities or public land managers may allow a range of uses in accordance with zoning bylaws and other land use decisions. These uses must be evaluated with respect to the five land uses described for Tier 1 guidelines. The most sensitive land use will determine Tier 1 guidelines.

Groundwater and surface water use conditions are assigned, if applicable, to one or more of the generic categories of potable water, surface water that is sustaining an aquatic ecosystem, water used for livestock or wildlife watering, and irrigation.

Exceptions to the above categories are discussed in the following section.

#### 5.2.2 Conformity with Generic Land and Water Use Categories

The principal criterion for the application of the Tier 1 guidelines is conformity with the generic land and water use scenarios and exposure conditions assumed in the development of the Tier 1 guidelines, and discussed in Section 3 of this document. It is the responsibility of the proponent to identify and respond to any site or receptor factors that could unduly accentuate exposure or risk beyond that envisioned in the Tier 1 exposure scenarios and, where necessary, move to the Tier 2 approach.

First, the land and water use must normally be encompassed by one or more of the defined generic categories. Examples of land uses not addressed in the development of the Tier 1 guidelines include wetlands and riparian zones. Examples of water uses not directly addressed by Tier 1 include: water used in the food processing industry (although this may be represented by the potable water scenario); and surface water used for swimming or similar recreational activity. In the absence of an applicable Tier 1 standard for the actual land or water use, a Tier 2 approach must be followed.

Second, the exposure conditions associated with the identified land and water use must not be more sensitive or critical than those assumed in the determination of the Tier 1 guidelines. Examples of factors giving rise to greater sensitivity are: a greater frequency or intensity of human or ecological exposure beyond that associated with typical use of the land or water; or, variations in physical site conditions resulting in greater exposure than that assumed (discussed in Section 5.1.6). The human and ecological exposure factors and physical parameters used for the Tier 1 guidelines are presented in Appendix C. These values should be used as the basis for assessing whether site-specific factors are indicative of more frequent or intense exposure.

Ingestion of produce, milk, and meat produced on the site is not included in Tier 1 human exposure estimates because of its site-specific nature. Where a significant portion of an individual's diet is obtained from areas contaminated by substances that bioconcentrate, this exposure pathway must be evaluated with the Tier 2 approach.

#### 5.2.3 Identification of Applicable Tier 1 Guidelines

Tier 1 guidelines for soil and groundwater are presented in Tables 1 through 4. Guidelines in Tables 1 through 3 are presented for coarse-grained and fine-grained soils; selection of the appropriate set of values is based on the texture of the dominant soil type as determined in the Tier 1 assessment. The dominant soil type is that which governs fate and transport via the various transport and exposure pathways. For example, a continuous layer of coarse-grained soil beneath the water table will often govern groundwater flow in the saturated zone, even though its thickness may be small in relation to the total thickness of saturated fine-grained soils. Similarly, a thin layer of fine-grained soil in the unsaturated zone may be a more significant control on the migration of vapours than a thicker layer of coarse-grained soil. Professional judgment should be exercised in establishing the dominant soil type.

The use of subsoil guidelines for petroleum hydrocarbons (Table 3) and salinity (Table 4) may be used at Tier 1 under the following circumstances:

#### Petroleum Hydrocarbons

Surface soil guidelines for petroleum hydrocarbon fractions F1 to F4, benzene, toluene, ethylbenzene, and xylenes must be applied to a depth of 1.5 m. Subsurface guidelines may be used as follows:

- below 1.5 m in depth within a 5 m setback from an oilfield wellhead (see Municipal Affairs and Housing Advisory Land Use Planning Notes on Abandoned Wellsites), or
- below 3 m in depth at any site.

Exclusion of the soil and groundwater direct ecological contact pathway is permissible under the Tier 1 approach at any site below a depth of 3 m for petroleum hydrocarbon fractions F1 to F4 only.

#### <u>Salinity</u>

Topsoil guidelines for electrical conductivity and sodium adsorption ratio must be applied to the L, F, H, O, and A horizons (Soil Classification Working Group, 1998) or equivalent surficial material where these horizons are not present. Subsoil guidelines may be applied below the A horizon or equivalent in lieu of topsoil guidelines. Further information is available in the *Salt Contamination Assessment and Remediation Guidelines* (AENV, 2001c).

For each contaminant, the lowest guideline tabulated in Appendix A and B for the established soil type and identified land use defines the governing exposure pathway/receptor and, hence, becomes the governing Tier 1 guideline. At Tier 1, all exposure pathways for which generic guidelines have been calculated must be considered. If the governing guideline is based on a soil to groundwater or surface water pathway that is not applicable to the site, based on the prior identification of water uses, a Tier 2 approach may be possible, and the companion Tier 2 document (AENV, 2007a) should be consulted.

#### 5.2.4 Additional Guidance for Specific Substances

#### <u>Salinity</u>

Electrical conductivity (EC) and sodium adsorption ratio (SAR) guidelines are found in Table 4 for topsoil and subsoil. At Tier 1, the objective for salt contaminated site remediation is to return the site to the same rating category as non-contaminated soils of the same type. To apply the guidelines, background samples are needed from uncontaminated soils that are representative of the same type, depth, and landscape position as the contaminated soil on the site. The background samples are used to establish the appropriate rating categories for the site. The range of EC and SAR values for the appropriate rating categories become the remediation objectives for the site. Further guidance is provided in the *Salt Contamination Assessment and Remediation Guidelines* (AENV, 2001c).

#### <u>Barite-Barium</u>

Guidelines are provided for both barium and barite-barium. The barium guidelines are intended to apply to all barium sources, and therefore assume that the source is relatively soluble. Barite, a commonly used weighting agent in drilling fluids, is relatively insoluble and therefore guidelines have been developed specifically for this form of barium. To confirm that barium measured in soil samples meets the conditions of low solubility assumed for the barite-barium guidelines, the sample must pass a  $CaCl_2$  extraction test. Further information on applying the barite-barium guidelines, including the  $CaCl_2$  test, is provided in *Soil Quality Guidelines for Barite: Environmental and Human Health* (AENV, 2004).

#### **Elemental Sulphur**

Tier 1 soil remediation guidelines are provided for elemental sulphur. If these values are exceeded, management options include the application of calcium carbonate to control the acidity generated by the oxidation of elemental sulphur. Elemental sulphur can be managed in this way up to a total sulphur concentration of 4%. Further guidance is provided in *Guidelines for the Remediation and Disposal of Sulphur Contaminated Solid Wastes* (AEP, 1996).

## **Drilling Waste Disposal Areas**

Drilling waste disposal falls under the jurisdiction of the Energy and Utilities Board. Management and disposal options are provided by Directive 50 (EUB, 1996). Alberta Environment has developed D50 Equivalent Salinity Guidelines for assessing and remediating drilling waste disposal areas for reclamation certification. Further information is provided in *Assessing Drilling Waste Disposal Areas: Compliance Options for Reclamation Certification* (AENV, 2007b).

## Polycyclic Aromatic Hydrocarbons (PAH)

Non-carcinogenic PAHs (naphthalene, acenapthene, fluorene, fluoranthene, anthracene, pyrene) have been included as components of petroleum hydrocarbon Fractions 1 to 4. When the sources of hydrocarbon contamination are crude petroleum or refined fuels, separate analysis of non-carcinogenic PAHs is not necessary. Analysis of these PAHs is necessary when dealing with non-petroleum hydrocarbons such as creosote or products such as solvents where individual compounds may be present at a much greater concentration than in crude products or fuels.

## 5.3 Tier 1 Decision and Management

The Tier 1 decision process is illustrated schematically by the lower part of the flow diagram presented in Figure 3. The process consists of a number of decision nodes. The decision process and criteria at each node are discussed in the following paragraphs.

## 5.3.1 Comparison of Conditions with Identified Tier 1 Guidelines

If no exceedances are found in the Tier 1 assessment, relative to the identified Tier 1 guidelines, any sources have been removed, and site conditions are consistent with application of Tier 1 process (see Section 5.1), the site can be considered to be in compliance with Tier 1 and no further action is necessary.

If exceedances are found, the proponent enters a decision process whereby the option of managing to Tier 1 guidelines is weighed against the option of proceeding to the Tier 2

approaches. If site conditions preclude application of Tier 1 guidelines (see Section 5.1.6) then the proponent must use the Tier 2 process.

Verification of remediation to Tier 1 or Tier 2 guidelines can achieve regulatory closure.

#### 5.3.2 Assessment of Opportunity for Tier 2

If the default assumptions used in the derivation of the governing Tier 1 guidelines are conservative relative to actual site-specific conditions, the replacement of default assumptions with site-specific data for certain influential parameters may permit the development and implementation of less stringent remediation guidelines without compromising health and environmental protection goals. Furthermore, point-of-exposure measurements, if less than those predicted using the relatively conservative modeling procedures employed to derive the Tier 1 guidelines, may also permit the implementation of less stringent guidelines. In such cases, proceeding to Tier 2 would generally be advantageous, and the companion Tier 2 document (AENV, 2007a) should be consulted.

#### Guideline values calculated for this document using latest available CCME protocols except where noted.

1. Value adopted from AEP (1994) and/or CCME 1991

2. Value adopted from CCME (1999)

3. For more information see Guidelines for the Remediation and Disposal of Sulphur Contaminated Solid Wastes (AEP, 1996)

4. For more information see Soil Quality Guidelines for Barite: Environmental Health and Human Health (AENV, 2004)

5. Ecological direct contact values from CCME (1999), other values calculated in this document

6. Ecological direct contact values from CCME (2007), other values calculated in this document

7. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture, as follows:

#### Fine Soil:

Notes:

IARC = [Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h, i]perylene]	([Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthrace ne]	([Indeno[1 ,2,3 - c,d]pyrene]
1.6 mg⋅kg <sup>-1</sup>	0.74 mg⋅kg <sup>-1</sup>	0.16 mg kg <sup>-1</sup>	32 mg⋅kg <sup>-1</sup>	1.7 mg⋅kg <sup>-1</sup>	10 mg⋅kg <sup>-1</sup>	1.1 mg⋅kg <sup>-1</sup>	13 mg⋅kg <sup>-1</sup>

#### Coarse Soil:

IARC -	[Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h, i]perylene]	([Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthrace ne]	([Indeno[1,2,3-c,d]pyrene]
-	3.1 mg⋅kg <sup>-1</sup>	1.4 mg⋅kg <sup>-1</sup>	0.31 mg⋅kg <sup>-1</sup>	63 mg⋅kg <sup>-1</sup>	3.4 mg⋅kg <sup>-1</sup>	19 mg·kg <sup>-1</sup>	2.1 mg⋅kg <sup>-1</sup>	24 mg⋅kg <sup>-1</sup>

8. For ecological receptors only

9. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-TCDD (See CCME, 1999 and updates)

10. When two or more radiounuclides are found, the following relationship should be satisfied:

$$\frac{\text{Radionucli de]}_1}{\text{Guideline }_1} + \frac{[\text{Radionucli de]}_2}{\text{Guideline }_2} + \dots \frac{[\text{Radionucli de]}_i}{\text{Guideline }_i} \leq \frac{1}{2}$$

For more information see Canadian Guidelines for the Management of Naturally Occurring Radioactive Materials (NORM) (Health Canada, 2000)

11. If trichloroethene is found in soil, its degradation product vinyl chloride must also be measured and compared to guideline values

12. Guideline for protection of aquatic life is below detection limit and has not been included in the Tier 1 derivation.

Groundwater monitoring is required for all land uses if the Tier 1 guideline is exceeded.

13. Guideline for protection of irrigation water is below detection limit and has not been included in the Tier 1 derivation.

Groundwater monitoring is required for agricultural land use if the Tier 1 guideline is exceeded.

#### Notes:

- I. See Surface Water Quality Guidelines for Use in Alberta (AENV, 1999) for further guidance on aquatic life pathway.
- 2. B[a]P TPE (Total Potency Equivalents) are calculated by multiplying the groundwater concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the estimates of carcinogenic potential and are based on the World Health Organization (1999) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

- 3. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline
- 4. For ecological receptors only
- 5. If trichloroethene is found in groundwater, its degradation product vinyl chloride must also be measured and compared to guideline values
- 6. When two or more radiounuclides are found, the following relationship should be satisfied:

 $\frac{[\text{Radionucli} \text{ de}]_1}{\text{Guideline }_1} + \frac{[\text{Radionucli} \text{ de}]_2}{\text{Guideline }_2} + \dots \frac{[\text{Radionucli} \text{ de}]_i}{\text{Guideline }_i} \leq 1$ 

NGR = no guideline required - values for all exposure pathways that could be calculated are above compound solubility

#### Table 3. Alberta Tier 1 Subsoil Remediation Guidelines (BTEX and PHCs Only)

Notes:

Guideline values calculated for this document using latest available CCME protocols except where noted.

1. Ecological direct contact values from CCME (1999), other values calculated in this document

2. All values calculated in this document

Rating Categories	Good	Fair	Poor	Unsuitable	Commercial/Industrial
		Topsoil <sup>e</sup>			
$EC^{a}(dS/m)$	<2 <sup>c</sup>	2 to 4	4 to 8	>8	4
SAR <sup>b</sup>	<4	4 to 8	8 to 12	>12 <sup>d</sup>	12
		Subsoil <sup>e</sup>			
$EC^{a} (dS/m)$	<3	3 to 5	5 to 10	>10	4
SAR <sup>b</sup>	<4	4 to 8	8 to 12	>12	12

Notes:

- a. Electrical conductivity
- b. Sodium Adsorption Ratio
- c. Some plants are sensitive to salts at EC < 2 dS/m</li>
  (e.g., flax, clover, beans, some wheat varieties, peas, some garden crops).
- *d.* Material characterized by SAR of 12 to 20 may be rated as poor if texture is sandy loam or coarser and saturation % is less than 100.
- e. Topsoil: surface A, L, F, H, and O horizons on the control area, or the equivalent surface soil where these horizons are not present.
  Subsoil: B and C horizons and the upper portion of the parent material.

#### APPENDIX A SOIL REMEDIATION GUIDELINES ALL EXPOSURE PATHWAYS

Appendix A consists of ten tables, comprised of surface soil and subsoil tables for each of the land uses. Each table provides the soil remediation guideline for each exposure pathway, where available. The ten tables are as follows:

- Table A-1. Surface Soil Remediation Guidelines for Natural Area Land Use
- Table A-2. Surface Soil Remediation Guidelines for Agricultural Land Use
- Table A-3. Surface Soil Remediation Guidelines for Residential/Parkland Use
- Table A-4. Surface Soil Remediation Guidelines for Commercial Land Use
- Table A-5. Surface Soil Remediation Guidelines for Industrial Land Use
- Table A-6. Subsoil Remediation Guidelines for Natural Area Land Use
- Table A-7. Subsoil Remediation Guidelines for Agricultural Land Use
- Table A-8. Subsoil Remediation Guidelines for Residential/Parkland Use
- Table A-9. Subsoil Remediation Guidelines for Commercial Land Use
- Table A-10. Subsoil Remediation Guidelines for Industrial Land Use

In some cases, there is a value for the overall guideline, but no values for individual exposure pathways. This situation corresponds to non-risk-based guidelines that have been adopted from previous guideline documents, as explained in the main text.

All exposure pathways are applicable at Tier 1. However, it may be possible to exclude or modify certain pathways at Tier 2. The companion Tier 2 document (AENV, 2007a) should be consulted for further information. The information in the tables in this appendix will assist in determining whether a Tier 2 approach for soil is likely to be useful at a given site.

e. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.

f. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

g. Guideline values adopted directly from CCME (1999 and updates) without change.

BDL - Below detection limit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | (mg/kg)   

 

 

 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 760                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 30,000  

 

 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 1  

 

   

 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 14 

 

 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 11 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 260 

 

 

 

- b. For more information see Soil Quality Guidelines for Barite: Environmental Health and Human Health (AENV, 2004)

c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

d. Because carcinogenic PAHs operate via different modes of toxic action, separate guideline values have been derived for ingestion and particle inhalation (first value) and dermal absorption (second value)

The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.

The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture, as follows:

Fine	Soil:		

IARC - [Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h,i]perylene]	[Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthrace ne]	([Indeno[1 ,2,3 - c,d]pyrene]
$1.6 \text{ mg} \text{kg}^{-1}$	0.74 mg⋅kg <sup>-1</sup>	0.16 mg⋅kg <sup>-1</sup>	32 mg·kg <sup>-1</sup>	1.7 mg·kg <sup>-1</sup>	10 mg·kg <sup>-1</sup>	1.1 mg·kg <sup>-1</sup>	13 mg·kg <sup>-1</sup>

Coarse Soil:

[Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h,i]perylene]	[Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthrace ne]	([Indeno[1 ,2,3 - c,d]pyrene]
3.1 mg·kg <sup>-1</sup>	1.4 mg⋅kg <sup>-1</sup>	0.31 mg·kg <sup>-1</sup>	63 mg⋅kg <sup>-1</sup>	3.4 mg⋅kg <sup>-1</sup>	19 mg·kg <sup>-1</sup>	2.1 mg·kg <sup>-1</sup>	24 mg·kg <sup>-1</sup>

g. Overall guideline value for ecological receptors only.

Guideline for protection of aquatic life or irrigation water is below detection limit, groundwater monitoring is required.

*i.* Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

Guideline values adopted directly from CCME (1999 and updates) without change.

BDL - Below detection limit

NGR - no guideline required, calculated value >1,000,000 mg/kg

h.

#### Notes:

a. For more information see Guidelines for the Remediation and Disposal of Sulphur Contaminated Solid Wastes (AEP, 1996)

- b. For more information see Soil Quality Guidelines for Barite: Environmental Health and Human Health (AENV, 2004)
- c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
ndeno[1,2,3-c,d]pyrene	0.1

d. Because carcinogenic PAHs operate via different modes of toxic action, separate guideline values have been derived for ingestion and particle inhalation (first value) and dermal absorption (second value)

e. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.

f. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture. For example, the IARC for coarse textured soil would be calculated as follows: Coarse Soil:

IARC -	[Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h, i]perylene]	([Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthracene]	([Indeno[1 ,2,3 - c,d]pyrene]
	1.6 mg⋅kg <sup>-1</sup>	0.74 mg⋅kg <sup>-1</sup>	0.16 mg⋅kg <sup>-1</sup>	32 mg⋅kg <sup>-1</sup>	1.7 mg·kg <sup>-1</sup>	10 mg kg <sup>-1</sup>	1.1 mg·kg <sup>-1</sup>	 13 mg⋅kg <sup>-1</sup>
Fine Soi	!:							
	[Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h,i]perylene]	([Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthrace ne]	([Indeno[1 ,2,3 - c,d]pyrene]
	3.1 mg kg <sup>-1</sup>	1.4 mg·kg <sup>-1</sup>	0.31 mg·kg <sup>-1</sup>	63 mg·kg <sup>-1</sup>	3.4 mg⋅kg <sup>-1</sup>	19 mg kg <sup>-1</sup>	2.1 mg·kg <sup>-1</sup>	24 mg·kg <sup>-1</sup>

g. Overall guideline value for ecological receptors only.

h. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.

i. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

j. Guideline values adopted directly from CCME (1999 and updates) without change.

BDL - Below detection limit

#### Notes:

- a. For more information see Guidelines for the Remediation and Disposal of Sulphur Contaminated Solid Wastes (AEP, 1996)
- b. For more information see Soil Quality Guidelines for Barite: Environmental Health and Human Health (AENV, 2004)
- c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a the standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

d. Because carcinogenic PAHs operate via different modes of toxic action, separate guideline values have been derived for ingestion and particle inhalation (first value) and dermal absorption (second value)

63 mg kg

e. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.

f. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture, as follows:

Coarse S	sous:						
IARC -	[Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h, i]perylene]	([Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthrace ne]
	1.6 mg⋅kg <sup>-1</sup>	0.74 mg⋅kg <sup>-1</sup>	0.16 mg·kg <sup>-1</sup>	32 mg·kg <sup>-1</sup>	1.7 mg·kg <sup>-1</sup>	10 mg kg <sup>-1</sup>	1.1 mg·kg <sup>-1</sup>
Fine Soi	ls:						
	[Benz[a]an thracene]	[Benzo[b + i]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzola, h.ilpervlene]	([Benzo[a]pvrene]	[Chrvsene]	[Dibenz[a, h]anthracene]

0.31 mg kg <sup>-1</sup>

g. Overall guideline value for ecological receptors only.

3.1 mg kg <sup>-1</sup>

h. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.

1.4 mg kg <sup>-1</sup>

i. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

j. Guideline values adopted directly from CCME (1999 and updates) without change.

BDL - Below detection limit

NGR - no guideline required, calculated value >1,000,000 mg/kg

Notes:

a. For more information see Guidelines for the Remediation and Disposal of Sulphur Contaminated Solid Wastes (AEP, 1996)

- b. For more information see Soil Quality Guidelines for Barite: Environmental Health and Human Health (AENV, 2004)
- c. Human health direct soil contact guidelines for carcinogenic PAHs are based on B[a]P Total Potency Equivalents (TPE). TPEs are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (WHO/IPCS, 1998) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

d. Because carcinogenic PAHs operate via different modes of toxic action, separate guideline values have been derived for ingestion and particle inhalation (first value) and dermal absorption (second value)

e. The B[a]P Total Potency Equivalents (TPEs) calculated for specific soil samples using Potency Equivalency Factors (PEFs) should be multiplied by an Uncertainty Factor of 3 when evaluating PAH mixtures associated with creosote or coal tar-type environmental releases, prior to evaluating against the human health direct contact soil remediation guideline.

f. The Index of Additive Cancer Risk (IACR) is calculated by dividing the soil concentration of each carcinogenic PAH by its Protection of Domestic Use Aquifer guideline value to calculate a hazard index for each PAH and subsequently summing the hazard indexes for the entire PAH mixture. For example, the IARC for coarse textured soil would be calculated as follows: Coarse Soil:

IAPC -	[Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h, i]perylene]	([Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthracene]	([Indeno[1,2,3-c,d]pyrene]
	1.6 mg·kg <sup>-1</sup>	0.74 mg⋅kg <sup>-1</sup>	0.16 mg⋅kg <sup>-1</sup>	32 mg·kg <sup>-1</sup>	1.7 mg·kg <sup>-1</sup>	10 mg⋅kg <sup>-1</sup> ′	1.1 mg⋅kg <sup>-1</sup>	 13 mg⋅kg <sup>-1</sup>
Fine Sc	oil:							
	[Benz[a]an thracene]	[Benzo[b + j]fluoranthene]	[Benzo[k]f luoranthen e]	[Benzo[g, h,i]perylene]	([Benzo[a]pyrene]	[Chrysene]	[Dibenz[a, h]anthrace ne]	[[Indeno[1,2,3-c,d]pyrene]
	3.1 mg⋅kg <sup>-1</sup>	1.4 mg·kg <sup>-1</sup>	0.31 mg·kg <sup>-1</sup>	63 mg·kg <sup>-1</sup>	3.4 mg·kg <sup>-1</sup>	19 mg kg <sup>-1</sup>	2.1 mg·kg <sup>-1</sup>	24 mg·kg <sup>-1</sup>

g. Overall guideline value for ecological receptors only.

h. Guideline for protection of aquatic life is below detection limit, groundwater monitoring is required.

i. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

j. Guideline values adopted directly from CCME (1999 and updates) without change.

# Table A-10. Subsoil Remediation Guideline Values for Industrial Land Use - All Exposure Pathways (BTEX and PHC Only)

Notes:

na = exposure pathway not applicable to subsoil

#### APPENDIX B GROUNDWATER REMEDIATION GUIDELINES ALL WATER USES

Appendix B consists of four tables, one for each of the land uses, except that commercial and industrial groundwater guidelines are identical, and separate tables are not required. Each table provides the groundwater remediation guideline for each applicable water use, where available. The four tables are as follows:

- Table B-1. Groundwater Remediation Guideline Values for Natural Area Land Use
- Table B-2. Groundwater Remediation Guideline Values for Agricultural Land Use
- Table B-3. Groundwater Remediation Guideline Values for Residential/Parkland Use
- Table B-4. Groundwater Remediation Guideline Values for Commercial/Industrial Land Use

Note that the groundwater guidelines protective of inhalation under agricultural or residential/parkland use are based on a building with slab-on-grade construction. These values are protective in all cases of both slab-on-grade and basement construction.

All water uses are applicable at Tier 1. However, it may be possible to exclude or modify certain water uses at Tier 2. The companion Tier 2 document (AENV, 2007a) should be consulted for further information. The information in the tables in this appendix will assist in determining whether a Tier 2 approach for groundwater is likely to be useful at a given site.

Notes:

a. B[a]P TPE (Total Potency Equivalents) are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (1999) scheme, as follows:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

b. For ecological receptors only.

c. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

d. See Surface Water Quality Guidelines for Use in Alberta (AENV, 1999) for further guidance on aquatic life pathway.

NGR - no guideline required, calculated value > solubility or >1,000,000 mg/L

*Potable GW* = *protection of groundwater for potable drinking water* 

*Eco Soil Contact = protection of terrestrial plants and soil invertebrates in areas with shallow groundwater* 

Aquatic Life = protection of groundwater discharging to a surface water body hosting aquatic life

*Wildlife Watering = protection of groundwater discharging to a surface water body from which wildlife may drink*

Notes:

a. B[a]P TPE (Total Potency Equivalents) are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence Factor (PEF) to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (1999) scheme, as follow:

Carcinogenic PAH Compound	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

b. For ecological receptors only.

c. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

d. See Surface Water Quality Guidelines for Use in Alberta (AENV, 1999) for further guidance on aquatic life pathway.

*NGR* - *no guideline required, calculated value* > *solubility or* >1,000,000 mg/L

*Potable GW* = *protection of groundwater for potable drinking water* 

Inhalation = protection of volatilization from groundwater and migration into indoor air

*Eco Soil Contact = protection of terrestrial plants and soil invertebrates in areas with shallow groundwater* 

Aquatic Life = protection of groundwater discharging to a surface water body hosting aquatic life

*Irrigation* = *protection of a potential irrigation groundwater source* 

*Livestock Watering* = *protection of a potential livestock watering groundwater resource* 

*Wildlife Watering = protection of groundwater discharging to a surface water body from which wildlife may drink*

#### Notes:

a. B[a]P TPE (Total Potency Equivalents) are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (1999) scheme, as follows:

<b>Carcinogenic PAH Compound</b>	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

b. For ecological receptors only.

c. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

d. See Surface Water Quality Guidelines for Use in Alberta (AENV, 1999) for further guidance on aquatic life pathway.

NGR - no guideline required, calculated value > solubility or >1,000,000 mg/L

Potable GW = protection of groundwater for potable drinking water

Inhalation = protection of volatilization from groundwater and migration into indoor air

*Eco Soil Contact = protection of terrestrial plants and soil invertebrates in areas with shallow groundwater* 

Aquatic Life = protection of groundwater discharging to a surface water body hosting aquatic life

#### Notes:

a B[a]P TPE (Total Potency Equivalents) are calculated by multiplying the soil concentration of individual carcinogenic PAHs by a standardized Benzo[a]pyrene Potency Equivalence to produce a Benzo[a]pyrene relative potency concentration, and by subsequently summing the relative potency concentrations for the entire PAH mixture. B[a]P PEFs are order of magnitude estimates of carcinogenic potential and are based on the World Health Organization (1999) scheme, as follows:

<b>Carcinogenic PAH Compound</b>	PEF
Benz[a]anthracene	0.1
Benzo(b+j)fluoranthene	0.1
Benzo[k]fluoranthene	0.1
Benzo[ghi]perylene	0.01
Benzo[a]pyrene	1
Chrysene	0.01
Dibenz[a,h]anthracene	1
Indeno[1,2,3-c,d]pyrene	0.1

b. For ecological receptors only.

c. Expressed as toxic equivalents (TEQs) based on 2,3,7,8-PCDD (See CCME, 1999 and updates)

d. See Surface Water Quality Guidelines for Use in Alberta (AENV, 1999) for further guidance on aquatic life pathway.

NGR - no guideline required, calculated value > solubility or >1,000,000 mg/L

Potable GW = protection of groundwater for potable drinking water

*Inhalation = protection of volatilization from groundwater and migration into indoor air* 

*Eco Soil Contact = protection of terrestrial plants and soil invertebrates in areas with shallow groundwater* 

Aquatic Life = protection of groundwater discharging to a surface water body hosting aquatic life

#### 1. INTRODUCTION

This Appendix provides the protocols, parameter values, and equations used to determine the numerical values for Alberta Tier 1 Soil and Groundwater Remediation Guidelines for each of the exposure pathways described in the main text.

#### 1.1 Approach

A Protocol for the Derivation of Environmental and Human Health Soil Quality Guidelines (CCME, 2006a) was used as a starting point for developing the soil remediation guidelines. The protocol was adapted as appropriate.

Since the Canadian Council of Ministers of the Environment (CCME) issued their protocol for deriving soil quality guidelines (CCME, 2006a), the deliberations associated with the 2006 review of the Petroleum Hydrocarbon Canada-Wide Standard (PHC CWS; CCME, 2007a) have resulted in changes to a few additional parameters. Most of these parameter changes have been adopted here. Additionally, where appropriate, parameters have been adjusted to reflect the differences between conditions in Alberta and the assumptions in the CCME guidance that reflect conditions in the whole of Canada.

No CCME protocols are currently available for calculating groundwater guidelines. Accordingly, for each exposure pathway, the corresponding CCME protocol for the soil guideline was adapted to calculate a groundwater guideline. Where calculated groundwater values are greater than the solubility of the chemical in question, the guideline value is replaced in the appropriate table with "NGR" for "no guideline required".

#### 2. PARAMETER VALUES

Parameter values used in the models that calculate the Alberta Tier 1 Soil and Groundwater Remediation Guidelines fall into two main groups: i) parameters relating to receptor exposure and properties of the site, referred to as "non-chemical-specific parameters"; and, ii) parameters that relate to the chemical properties, toxicity, or background exposure to chemicals, referred to as "chemical-specific parameters". These two groups of parameters are discussed below.

#### 2.1 Non-Chemical-Specific Parameters

Parameter values used in the models in this section relating to human receptor characteristics, soil and hydrogeological parameters, site characteristics, building parameters, and livestock and wildlife receptor characteristics are summarized in Tables C-1 to C-5, respectively. All parameters are adopted directly from CCME (2006a) except where noted below.

In Table C-2, the saturated hydraulic conductivity for fine soils is 32 m/year for all exposure pathways, the lateral hydraulic gradient is 0.028, and the soil permeability to vapour flow is  $10^{-9}$  cm<sup>2</sup> for fine soil and  $6 \times 10^{-8}$  cm<sup>2</sup> for coarse soil. These changes from parameter values in CCME (2006a) are based on the latest decisions made by the Soil Quality Guidelines Task Group of the CCME, and reflect the deliberations that took place during the process of revising the PHC CWS (CCME, 2007a). The groundwater recharge rate is 0.012 m/year in fine soil and 0.06 m/year in coarse soil. Groundwater recharge rates are based on extensive research by Atomic Energy of Canada Limited (AECL, 1990, 1991, 1992, and 1995) and hydrogeological literature for the prairies (e.g., Trudell, 1994; Keller et al., 1986; Woo and Rowsell, 1993). This work is consistent with groundwater recharge being less than 10% of precipitation in Coarse soils and less than 2% of precipitation in Fine soils. Taking these values together with precipitation data for the wettest of the Alberta locations for which climate normals are available (Edson: precipitation = 568 mm/year, based on 1961 to 1990 Canadian Climate Normals, Environment Canada, 2001) and rounding up, gives recharge values of 60 mm/year, and 12 mm/year for Coarse and Fine soils, respectively.

In Table C-4, the height for a residential building is 360 cm, and the air exchange rates for residential and commercial buildings are 0.5 and 0.9 exchanges/hour, respectively. Again, these changes from parameter values in CCME (2006a) are based on the latest decisions made by the Soil Quality Guidelines Task Group of the CCME, and reflect the deliberations that took place during the process of revising the PHC CWS (CCME, 2007a). In addition, for petroleum hydrocarbons only, there is an adjustment factor of 10 applied in the calculation of the indoor infiltration and inhalation guideline, reflecting empirical evidence that concentrations of petroleum hydrocarbon vapours in buildings are typically less than predicted values by this factor or more due to biodegradation in the subsurface and conservatism in the partitioning relationship as it applies to these substances. No adjustment factor is used for non-petroleum hydrocarbons, since no empirical evidence is available to support such a factor.

In Table C-5, the cattle body weight and water ingestion rate are the same as were used in CCME (2006a), and the soil ingestion rate is taken from NRC (1996). The meadow vole was selected as the surrogate ecological receptor that would be protective of the majority of wildlife species, based on its small home range and high soil and water ingestion rates relative to its bodyweight. Meadow vole body weight and water ingestion rate were taken from USEPA (1993). Meadow vole soil ingestion rate was calculated from data and equations provided in USEPA (1993) as follows:

$$SIR = FIR \cdot PSID$$

#### and

#### $FIR = 0.0687 \cdot BW^{0.822} \cdot 1,000$

Where:	SIR	=	soil ingestion rate for meadow voles (g/day);
	PSID	=	proportion of soil in diet for meadow voles $(0.024 - USEPA, 1993)$ .
	FIR	=	food ingestion rate for meadow voles (2.41 g dry weight/day; calculated below);
	BW	=	meadow vole body weight (0.017 kg – minimum value from the range given in USEPA, 1993); and,
	1,000	=	conversion factor from kg to g.

Substituting these values in the above equation yields value for FIR of 2.41 g dry weight/day and for SIR of 0.058 g day (Table C-5).

#### 2.2 Chemical-Specific Parameters

#### 2.2.1 Physical Parameters

Physical parameters for the Alberta Tier 1 substances are summarized in Table C-6, together with an indication of the source for each. The parameters  $K_{oc}$  (organic carbon partition coefficient), H' (dimensionless Henry's Law constant), and  $D_{air}$  (diffusion coefficient in air) are used in the soil and groundwater guideline models. Solubility was also included, to enable groundwater guideline values greater than solubility to be identified. References for each source are provided at the end of this appendix.

#### 2.2.2 <u>Toxicological Parameters</u>

Human toxicity reference values (TRVs) for the Alberta Tier 1 substances are summarized in Table C-7, together with an indication of the source for each. For non-carcinogenic substances, the applicable TRVs are the tolerable daily intake (TDI) for oral exposure and the tolerable concentration (TC) for inhalation exposure. For carcinogens, the oral slope factor and the inhalation unit risk are provided in Table C-7. Where needed in the guideline calculations, the risk-specific dose and the risk-specific concentration were calculated as follows:

$$RsD = \frac{ARL}{SF}$$
$$RsC = \frac{ARL}{UR}$$

Where:

RsD	=	risk-specific dose (mg/kg bw per day);
ARL	=	acceptable risk level $(10^{-5}, \text{ see below})$ ; and,
SF	=	slope factor (Table C-7); (mg/kg bw per day) <sup>-1</sup> ;
RsC	=	risk-specific concentration (mg/m <sup>3</sup> );
UR	=	unit risk (Table C-7); $(mg/m^3)^{-1}$ .

The acceptable risk level was set at  $10^{-5}$  based on guidance in Health Canada (Health Canada, 2004a) and precedent from Alberta Environment.

TRVs were taken from the following sources, in order of preference:

- Health Canada;
- CCME guideline documents;
- The United States Environmental Protection Agency (IRIS database); and,
- The United States Oak Ridge National Laboratory toxicological database.

For volatile chemicals, if an inhalation tolerable concentration or unit risk was not available, one was estimated from the oral tolerable daily intake or the oral slope factor, using the adult body weight and inhalation rate provided in Table C-1. References for each source are provided at the end of this appendix.

#### 2.2.3 Human Exposure Parameters

Human absorption factors are summarized in Table C-8.

Human background exposure parameters for the Alberta Tier 1 substances are summarized in Table C-9, together with an indication of the source for each. Note that background exposure rates are not required in the case of carcinogenic chemicals. Parameter values include toddler and adult estimated daily intake (EDI), which is the daily dose of chemical that an individual might receive from all non-site-related sources (assumed to be soil, water, air, food, and consumer products for Tier 1 guideline derivation), background air concentration ( $C_a$ ), and soil allocation factor (SAF). The following sources of background exposure information were used, in order of preference:

- CCME guideline documents;
- Assessments carried out as part of the priority substance list (PSL) program under the Canadian Environmental Protection Act (CEPA); and,

• Information in the United States Agency for Toxic Substances and Disease Registry toxicological profiles.

Recognizing that a receptor might be exposed to contaminants from other sources than site-related soil, a soil allocation factor is used to ensure that exposure to contaminated soil represents only a portion of the overall allowable exposure. For the purposes of guideline calculation, exposure is assumed to be possible from five environmental compartments: soil, water, air, food, and consumer products (CCME, 2006a). Values for the soil allocation factor (SAF) were selected based on the following logic:

- 1. If a value of SAF other than the default value of 0.2 had previously been used in a guideline document, then that value was retained (e.g., hydrocarbon compounds, sulfolane, DIPA).
- 2. If the substance could exist in all five of the environmental compartments, then the default SAF of 0.2 was used.
- 3. If background exposure information was available and it was unlikely that the substance would appear in one of the five environmental compartments because of its chemical or physical properties, then an SAF of 0.25 was used to reflect exposure divided between the remaining four compartments.

References for each source are provided at the end of this appendix.

# 2.2.4 Petroleum Hydrocarbon Fractions

Petroleum hydrocarbons are a complex mixture of substances. To facilitate the calculation of risk-based soil and groundwater remediation guidelines, each fraction has been divided into several sub-fractions on the basis of chemical structure (aliphatic vs. aromatic) and carbon chain length.

Soil or groundwater remediation guidelines for each PHC fraction were developed by combining guidelines for each individual sub-fraction according to the proportion (by mass) of each sub-fraction within the fraction, according to the equation below:

$$SGRG (mg/kg - bw/day) = \frac{1}{\sum_{i} \frac{F_i}{SGRG_i}}$$

Where:

SGRG = soil (mg/kg)or groundwater (mg/L) remediation guideline;

- $F_i$  = the assumed proportion of the fraction in soil or groundwater made up of sub-fraction i (dimensionless, see below; values in Table C-10); and,
- SGRG<sub>i</sub> = soil (mg/kg) or groundwater (mg/L) remediation guideline for subfraction "i" (mg/kg).

The assumed proportion of each sub-fraction differs for soil and groundwater, since each sub-fraction partitions differently between soil and groundwater. Assumed sub-fraction

distributions for soil and groundwater are provided in Table C-10. The assumed subfraction distributions in soil are adopted directly from CCME (2007a). The assumed subfraction distributions in groundwater are calculated from the soil values by making standard equilibrium partitioning assumptions and using the following equations:

$$G_{i} = F_{i(soil)} \frac{\rho_{b}}{\theta_{w} + (K_{oc} \times f_{oc} \times \rho_{b}) + (H' \times \theta_{a})}$$

and

$$F_{i(groundwater)} = \frac{G_i}{\sum_i G_i}$$

Where:

Gi

=

		dimensionless);
F <sub>i(soil)</sub>	=	proportion of fraction i in soil (Table C-10; dimensionless);
F <sub>i(grou</sub>	ndwater)=	proportion of fraction i in groundwater (normalized; Table C-10;
		dimensionless);
$ ho_b$	=	dry soil bulk density (g/cm <sup>3</sup> );
$\theta_{\rm w}$	=	moisture-filled porosity (dimensionless);
Koc	=	organic carbon partition coefficient (L/kg);
$\mathbf{f}_{oc}$	=	fraction of organic carbon (g/g);
H′	=	dimensionless Henry's Law Constant (dimensionless); and,
$\theta_a$	=	vapour-filled porosity (dimensionless).

proportion of fraction i in groundwater (before normalization;

#### 2.2.5 <u>Water Quality Guidelines</u>

Water quality guidelines for the Alberta Tier 1 chemicals are required as a starting point for calculating soil or groundwater remediation guidelines that are protective of groundwater uses. Values are summarized in Table C-11.

The values for human health were taken from the following sources, in order of preference:

- Health Canada Canadian Drinking Water Quality Guidelines (Health Canada, 2004c);
- Drinking water guidelines that were calculated from the oral TRVs summarized in Table C-7 using the adult exposure parameters summarized in Table C-1.

The values for ecological receptors were taken from the following sources, in order of preference:

- Alberta Surface Water Quality Guidelines (AENV, 1999); and,
- Livestock or wildlife watering guidelines calculated from published daily threshold exposure doses (DTEDs) and the ecological exposure parameters presented in Table C-5.

#### 3. HUMAN EXPOSURE PATHWAYS

#### 3.1 **Direct Contact**

The model used to calculate the soil remediation guidelines protective of the human direct soil contact (soil ingestion, dermal contact, and particulate inhalation) is taken without change from CCME (2006a). Based on guidance in CCME (2006a), exposure via particulate inhalation was not considered for volatile compounds (IRs was set to 0 kg/day for volatile chemicals in the equations below). Parameter values were discussed in Section 2, and parameter values are summarized in Tables C-1 to C-9. Separate calculations are made for carcinogens and non-carcinogenic chemicals.

#### **Non-Carcinogens**

$$SRG_{HH} = \frac{(TDI - EDI) \times SAF \times BW}{\left[ \left( AF_G \times SIR \right) + \left( AF_L \times IR_S \times ET_2 \right) + \left( AF_S \times SR \right) \right] \times ET_1} + \left[ BSC \right]$$

#### Where:

SRG <sub>HH</sub>	=	human health-based soil remediation guideline (mg/kg);
TDI	=	tolerable daily intake (mg/kg bw per day);
EDI	=	estimated daily intake (mg/kg bw per day);
SAF	=	soil allocation factor (dimensionless);
BW	=	adult or toddler body weight (kg);
AF <sub>G</sub>	=	absorption factor for gut (dimensionless);
$AF_L$	=	absorption factor for lung (dimensionless);
AFs	=	absorption factor for skin (dimensionless);
SIR	=	adult or toddler soil ingestion rate (kg/day);
IRs	=	inhalation of particulate matter re-suspended from soil (kg/day);
SR	=	adult or toddler soil dermal contact rate (kg/day; calculated below);
$ET_1$	=	exposure term 1 (dimensionless) (days/week $\div$ 7 x weeks/year $\div$ 52);
$ET_2$	=	exposure term 2 (dimensionless) (hours/day ÷ 24); and,
BSC	=	background soil concentration (mg/kg).

#### Carcinogens (except carcinogenic polycyclic aromatic hydrocarbons)

$$SRG_{HH} = \frac{(RsD) \times BW}{\left[ \left( AF_G \times SIR \right) + \left( AF_L \times IR_S \times ET_2 \right) + \left( AF_S \times SR \right) \right] \times ET_1} + \left[ BSC \right]$$

Where:

SRG <sub>HH</sub>	=	preliminary human health-based soil remediation guideline (mg/kg);
RsD	=	risk-specific dose (mg/kg bw per day);
$\mathbf{BW}$	=	adult body weight (kg);
$AF_G$	=	absorption factor for gut (dimensionless);
$AF_L$	=	absorption factor for lung (dimensionless);
AFs	=	absorption factor for skin (dimensionless);
SIR	=	adult soil ingestion rate (kg/day);
IR <sub>s</sub>	=	inhalation of particulate matter re-suspended from soil (kg/day);
SR	=	adult soil dermal contact rate (kg/day);
$ET_1$	=	exposure term 1 (dimensionless) (days/week ÷ 7 x weeks/year ÷ 52);
$ET_2$	=	exposure term 2 (dimensionless) (hours/day $\div$ 24); and,
BSC	=	background soil concentration (mg/kg).

Note that in contrast to the CCME (2006a) protocol, an exposure term based on the exposure scenario is used for commercial and industrial land use for carcinogens.

#### Carcinogenic Polycyclic Aromatic Hydrocarbons

Polycyclic aromatic hydrocarbons (PAHs) commonly occur as complex mixtures that may include compounds known or suspected to be carcinogenic. Soil and groundwater remediation guidelines have been calculated for benzo[a]pyrene. The benzo[a]pyrene guideline is applied to other carcinogenic PAHs through the use of Potency Equivalence Factors (PEFs). PEFs establish the toxicity of individual carcinogenic PAHs relative to benzo[a]pyrene. The notes in Appendix A and B explain the use of PEFs in more detail.

PEFs are also used in the calculation of soil guidelines for the protection of drinking water. The Risk Specific Dose (RSD) for benzo[a]pyrene is multiplied by the appropriate PEF to derive a RSD for each carcinogenic PAH. This value is then used in the calculation of individual soil guidelines for the protection of drinking water as explained in Section 5.1.2. These guidelines are then used with site-specific soil concentrations to calculate the Index of Additive Cancer Risk (IARC) as explained in the notes in Appendix A.

Dermal exposure to carcinogenic polycyclic aromatic hydrocarbons (PAHs) results in different mode of action than exposure via inhalation or ingestion (CCME, 2007b). As a result, the soil remediation guideline for the dermal exposure pathway is calculated separately, using the following equation:

$$SRG_{HH(D)} = \frac{(RsD) \times BW}{AF_s \times SR \times ET_1} + [BSC]$$

Where:

SRG <sub>HH(D)</sub>	=	preliminary human health-based soil remediation guideline (mg/kg);		
RsD	=	risk-specific dose for benzo[a]pyrene (mg/kg bw per day);		
BW	=	adult body weight (kg);		
AFs	=	absorption factor for skin (dimensionless);		
SR	=	adult soil dermal contact rate (kg/day);		
$ET_1$	=	exposure term 1 (dimensionless) (days/week ÷ 7 x weeks/year ÷ 52);		
BSC	=	background soil concentration (mg/kg).		

Soil ingestion and inhalation pathways remain combined for carcinogenic PAHs and the soil remediation guideline is calculated as follows:

$$SRG_{HH(I)} = \frac{(RsD) \times BW}{\left[ \left( AF_G \times SIR \right) + \left( AF_L \times IR_S \times ET_2 \right) \right] \times ET_1} + \left[ BSC \right]$$

Where:

SRG <sub>HH(I)</sub>	=	preliminary human health-based soil remediation guideline (mg/kg);
RsD	=	risk-specific dose for benzo[a]pyrene (mg/kg bw per day);
BW	=	adult body weight (kg);
$AF_G$	=	absorption factor for gut (dimensionless);
$AF_L$	=	absorption factor for lung (dimensionless);

SIR	=	adult soil ingestion rate (kg/day);
IRs	=	inhalation of particulate matter re-suspended from soil (kg/day);
$ET_1$	=	exposure term 1 (dimensionless) (days/week ÷ 7 x weeks/year ÷ 52);
$ET_2$	=	exposure term 2 (dimensionless) (hours/day ÷ 24); and,
BSC	=	background soil concentration (mg/kg).

Similar to other carcinogens, an exposure term based on the exposure scenario is used for commercial and industrial land use for both the dermal and the ingestion/inhalation pathways.

## 3.1.1 Soil Dermal Contact Rate

The soil dermal contact rate (SR) is the mass of contaminated soil which is assumed to contact the skin each day. This parameter is calculated as follows (CCME, 2006a):

$$SR = \{ (SA_H \times DL_H) + (SA_O \times DL_O) \} \times EF$$

Where:

SR	=	soil dermal contact rate (kg/day);
$SA_{H}$	=	exposed surface area of hands (m <sup>2</sup> );
$DL_H$	=	dermal loading of soil to hands (kg/m <sup>2</sup> per event);
SAo	=	area of exposed body surfaces other than hands $(m^2)$ ;
DLo	=	dermal loading of soil to other surfaces (kg/m <sup>2</sup> per event); and,
EF	=	exposure frequency (events/day).

The soil dermal contact rate is calculated separately for toddlers and adults using the parameters in Table C-1.

#### 3.2 Inhalation

Soil and groundwater guidelines protective of the indoor infiltration and inhalation pathway were calculated for volatile organic compounds using the equations from the CCME (2006a) protocol without change for soil and adapted as appropriate for groundwater.

#### 3.2.1 Adjustment Factor

Consistent with the approach taken in CCME (2007a), an adjustment factor of 10 is applied in the equations below for petroleum hydrocarbons (see Section 2.1), to account for empirical evidence that measured indoor air concentrations are typically lower by at least this factor than concentrations predicted from the models below. The adjustment factor takes the value of 1 for all non-petroleum hydrocarbon chemicals, reflecting the lack of any empirical data to support such a factor for these chemicals.

#### 3.2.2 Assumptions

Assumptions implicit in the model include the following:

- contaminant vapour immediately above the groundwater table is assumed to be in equilibrium with contaminant concentrations in the groundwater based on Henry's Law;
- the soil is physically and chemically homogeneous;
- cracks in the building floor slab are filled with dry material of the underlying soil type;
- the moisture content is uniform throughout the unsaturated zone;
- decay of the contaminant source is not considered (*i.e.*, infinite source mass);
- attenuation of the contaminant in the unsaturated zone is not considered, except in the case of hydrocarbons, where the adjustment factor accounts empirically for this and other processes;
- interactions of the contaminant with other chemicals or soil minerals are not considered.

# 3.2.3 <u>Soil</u>

# Non-Carcinogens

	SRG -	( <i>TC</i> -	$-C_a) \times [c$	$\theta_{w} + (K_{oc} \times f_{oc} \times \rho_{b}) + (H' \times \theta_{a})] \times SAF \times DF_{i} \times 10^{3} \times AF + BSC$
	SKOI	_		$H' \times \rho_b \times ET \times 10^6$
Where:	:	SRG <sub>I</sub>	=	soil remediation guideline for indoor infiltration (mg/kg);

	(	$\theta_{a}$	=	vapour-filled porosity (dimensionless);
	:	SAF	=	soil allocation factor (dimensionless);
	]	DF <sub>i</sub>	=	dilution factor from soil gas to indoor air (calculated below);
		$10^{3}$	=	conversion factor from kg to g;
		AF	=	adjustment factor (10, hydrocarbons; 1, non-petroleum hydrocarbons);
	]	ET	=	exposure term (dimensionless);
		$10^{6}$	=	conversion factor from m <sup>3</sup> to cm <sup>3</sup> ; and,
	]	BSC	=	background soil concentration (mg/kg).

#### **Carcinogens**

$$SRG_{I} = \frac{RsC \times \left[\theta_{w} + \left(K_{oc} \times f_{oc} \times \rho_{b}\right) + \left(H' \times \theta_{a}\right)\right] \times DF_{i} \times 10^{3} \times AF}{H' \times \rho_{b} \times ET \times 10^{6}} + BSC$$

Where:	SRG <sub>I</sub> RsC	=	soil remediation guideline for indoor infiltration (mg/kg); risk-specific concentration (mg/m <sup>3</sup> ):
	$\theta_{w}$ $K_{oc}$	=	moisture-filled porosity (dimensionless); organic carbon partition coefficient (L/kg);

f <sub>oc</sub>	=	fraction of organic carbon (g/g);
ρ <sub>b</sub>	=	dry soil bulk density (g/cm <sup>3</sup> );
H′	=	Henry's Law Constant (dimensionless);
$\theta_a$	=	vapour-filled porosity (dimensionless);
DFi	=	dilution factor from soil gas to indoor air (calculated below);
$10^{3}$	=	conversion factor from kg to g;
AF	=	adjustment factor (10, hydrocarbons; 1, non-petroleum hydrocarbons);
ΕT	=	exposure term (dimensionless);
$10^{6}$	=	conversion factor from m <sup>3</sup> to cm <sup>3</sup> ; and,
BSC	=	background soil concentration (mg/kg).

Note that in contrast to the CCME (2006a) protocol, an exposure term of 0.2747 (corresponding to exposure to site-related contaminants for 10 hours/day, 5 days/week, and 48 weeks/year) is used for commercial and industrial land use for carcinogens.

#### 3.2.4 Groundwater

Groundwater remediation guidelines were calculated using equations analogous to those above, but with adaptations to account for a groundwater, rather than soil, source.

#### Non-Carcinogens

			$GWRG_{I} = \frac{(TC - C_{a}) \times SAF \times DF_{i} \times AF}{H' \times ET \times 10^{3}}$
Where:	GWRG <sub>I</sub> =		groundwater remediation guideline for indoor infiltration (mg/L);
	TC	=	tolerable concentration (mg/m <sup>3</sup> );
	Ca	=	background air concentration (mg/m <sup>3</sup> );
	SAF	=	soil allocation factor (dimensionless);
	DF <sub>i</sub>	=	dilution factor from soil gas to indoor air (calculated below);
	AF	=	adjustment factor (10, hydrocarbons; 1, non-petroleum hydrocarbons);
	H′	=	Henry's Law Constant (dimensionless);
	ET	=	exposure term (dimensionless); and,
	$10^{3}$	=	conversion factor from $m^3$ to L.

#### **Carcinogens**

$$GWRG_{I} = \frac{RsC \times DF_{i} \times AF}{H' \times ET \times 10^{3}}$$

		•
e:	GWRG <sub>I</sub> =	groundwater remediation guideline for indoor infiltration (mg/L);
	RsC =	risk-specific concentration (mg/m <sup>3</sup> );
	$DF_i =$	dilution factor from soil gas to indoor air (calculated below);
	AF =	adjustment factor (10, hydrocarbons; 1, non-petroleum hydrocarbons);
	H' =	Henry's Law Constant (dimensionless);
	ET =	exposure term (dimensionless);
	$10^3$ =	conversion factor from $m^3$ to L; and,
Note that in contrast to the CCME (2006a) protocol, an exposure term of 0.2747 (corresponding to exposure to site-related contaminants for 10 hours/day, 5 days/week, and 48 weeks/year) is used for commercial and industrial land use for carcinogens.

#### 3.2.5 Dilution Factor Calculation

This section presents the equations (CCME, 2006a) that were used to calculate the dilution factor in the above equations. The dilution factor  $(DF_i)$  was calculated as follows:

$$DF_i = \frac{1}{\alpha}$$

Where:

:  $DF_i$  = dilution factor from soil gas concentration to indoor air concentration (unitless); and,

 $\alpha$  = attenuation coefficient (unitless; see derivation below).

#### Calculation of α

The attenuation coefficient,  $\alpha$ , was calculated using the following equation:

$$\alpha = \frac{\left(\frac{D_T^{eff} A_B}{Q_B L_T}\right) exp\left(\frac{Q_{soil} L_{crack}}{D_{crack} A_{crack}}\right)}{exp\left(\frac{Q_{soil} L_{crack}}{D_{crack} A_{crack}}\right) + \left(\frac{D_T^{eff} A_B}{Q_B L_T}\right) + \left(\frac{D_T^{eff} A_B}{Q_{soil} L_T}\right) \left[exp\left(\frac{Q_{soil} L_{crack}}{D_{crack} A_{crack}}\right) - I\right]}$$

Where:

attenuation coefficient (dimensionless); α =  ${D_{T}}^{e\mathrm{ff}}$ effective porous media diffusion coefficient (cm<sup>2</sup>/s; calculated below); =  $A_B$ = building area (cm<sup>2</sup>); building ventilation rate (cm<sup>3</sup>/s; calculated below); =  $Q_{\rm B}$ distance from contaminant source to foundation (cm);  $L_T$ = volumetric flow rate of soil gas into the building (cm<sup>3</sup>/s; calculated below);  $Q_{soil}$ = thickness of the foundation (cm); = Lcrack effective vapour diffusion coefficient through the crack (cm<sup>2</sup>/s; calculated D<sub>crack</sub> = below); and, area of cracks through which contaminant vapours enter the building  $(cm^2)$ .  $A_{crack}$ =

**<u>Calculation of D<sub>T</sub></u><sup>eff</sup>**:

$$D_T^{eff} \approx D_a \times \left(\frac{\theta_a^{10/3}}{\theta_t^2}\right)$$

Where:	$D_{T}^{\ eff}$	=	overall effective porous media diffusion coefficient based on vapour- phase concentrations for the region between the source and foundation $(cm^2/s)$ ;
	Da	=	diffusion coefficient in air (cm <sup>2</sup> /s);
	$\theta_{a}$	=	soil vapour-filled porosity (dimensionless); and,
	$\theta_t$	=	soil total porosity (dimensionless).

## **Calculation of D**crack:

 $D_{crack}$  is calculated in exactly the same way as  $D_T^{eff}$ , with the exception that the assumption is made that the soil material in the cracks is dry (CCME, 2006a), and accordingly, the air filled porosity is the same as the total porosity, and the equation becomes:

$$D_{crack} \approx D_a \times \left(\frac{\theta_t^{10/3}}{\theta_t^2}\right)$$

effective porous media diffusion coefficient in floor cracks (cm<sup>2</sup>/s); Where: D<sub>crack</sub> = diffusion coefficient in air  $(cm^2/s)$ ;  $D_a$ =  $\theta_t$ total porosity (dimensionless). =

#### Calculation of Q<sub>B</sub>:

0 -	$L_B W_B H_B A C H$
$\mathcal{Q}_B$ –	3,600

			·
Where:	$Q_B$	=	building ventilation rate (cm <sup>3</sup> /s);
	L <sub>B</sub>	=	building length (cm);
	$W_B$	=	building width (cm);
	$H_{B}$	=	building height (cm);
	ACH	=	air exchanges per hour $(h^{-1})$ ; and,
	3,600	=	conversion factor from hours to seconds.

### **Calculation of Q<sub>soil</sub>:**

$$Q_{soil} = \frac{2\pi\Delta Pk_v X_{crack}}{\mu \ln \left[\frac{2Z_{crack}}{r_{crack}}\right]}$$

Where	Q <sub>soil</sub>	=	volumetric flow rate of soil gas into the building (cm <sup>3</sup> /s);
	$\Delta P$	=	pressure differential $(g/cm \cdot s^2)$ ;
	k <sub>v</sub>	=	soil vapour permeability to vapour flow (cm <sup>2</sup> );
	X <sub>crack</sub>	=	length of idealized cylinder (cm);
	μ	=	vapour viscosity (0.000173 g/cm·s; CCME, 2006a);
	Z <sub>crack</sub>	=	distance below grade to idealized cylinder (cm); and,
	r <sub>crack</sub>	=	radius of idealized cylinder (cm; calculated as Acrack/Xcrack).

#### 3.3 **Offsite Migration**

"Offsite Migration" guidelines are calculated to check that the guideline set for commercial and industrial land use will not result in adjacent more sensitive land being contaminated at levels above the applicable guideline for the sensitive land due to wind

and/or water transport of contaminated soil from the commercial or industrial site. The guideline is calculated using the equation provided in the CCME (2006a) protocol:

 $SRG_{OM} = (14.3 \times SRG_A) - (13.3 \times BSC)$ 

Where	SRG <sub>OM</sub> =	soil remediation guideline protective of offsite migration (mg/kg);
	$SRG_A =$	soil remediation guideline for human direct soil contact for agricultural
		land use (mg/kg); and,
	BSC =	background soil concentration (mg/kg).

A similar off-site migration check is calculated for ecological health using the ecological direct contact soil remediation guideline for agricultural land use.

### 4. ECOLOGICAL EXPOSURE PATHWAYS

### 4.1 Direct Contact

#### 4.1.1 <u>Soil</u>

The exposure pathway considering direct contact of plants, soil invertebrates and microbes with contaminated soil is an important primary pathway in CCME (2006a), and is also important in the framework under which the Alberta Tier 1 guidelines were developed. Existing CCME soil quality guideline values were adopted for this exposure pathway. The reader is referred to CCME (2006a) for information on the protocol used to develop the existing guidelines for this exposure pathway.

The CCME recently reviewed the direct contact exposure pathway for petroleum hydrocarbon guidelines. As part of the review, a study was commissioned to review currently available data and identify suitable data for guideline derivation. The guideline derivation process followed CCME (2006a) recommendations as closely as possible. Some data came from research programmes that were not related to CCME guideline development, but that were nevertheless deemed to provide important information for guideline development. Alternative data treatments were developed for these data without compromising CCME or Alberta Environment protection goals. Details of the guideline derivation processes are documented in CCME (2007a). To maintain consistency with the CCME approach for benzene, toluene, ethylbenzene, and xylenes, subsoil ecocontact guidelines for petroleum hydrocarbons were set at twice the surface soil guidelines.

### 4.1.2 Groundwater

The direct contact of shallow groundwater with plants and soil invertebrates pathway is applicable whenever groundwater is present within 3 m of the ground surface. It applies to all land uses, and is based on the corresponding soil guideline. The approach for this exposure pathway for three different chemical classes is provided below.

#### Non-Polar Organic Compounds

Non-polar organic compounds can partition between soil organic carbon, pore water, and pore vapour, based on well-established partitioning equations. The guideline for this exposure pathway for these chemicals is calculated from existing eco soil contact soil remediation guidelines using standard assumptions for the partitioning of the contaminant between soil and pore water. Separate guidelines are calculated for coarse and fine soils, using the following equation:

$$GWRG_{DC} = SRG_{DC} \frac{\rho_b}{\theta_w + (K_{oc} \times f_{oc} \times \rho_b) + (H' \times \theta_a)}$$

Where:

GWRG<sub>DC</sub>= groundwater remediation guideline protective of direct contact with plants and soil invertebrates in areas of shallow groundwater (mg/L);

$SRG_{DC} =$		soil remediation guideline protective of direct contact with plants		
		and soil invertebrates (mg/kg);		
$\rho_b$	=	dry soil bulk density (g/cm <sup>3</sup> );		
$\theta_{\rm w}$	=	moisture-filled porosity (dimensionless);		
Koc	=	organic carbon partition coefficient (L/kg);		
$\mathbf{f}_{oc}$	=	fraction of organic carbon (g/g);		
$\mathbf{H'}$	=	dimensionless Henry's Law Constant (dimensionless); and,		
$\theta_a$	=	vapour-filled porosity (dimensionless).		

Soil remediation guidelines protective of ecological soil contact are available for selected chemicals in Appendix A.

#### Salt Compounds

Groundwater guidelines for salts are not calculated in this document.

#### Metals and Polar Organic Compounds

The potential interactions between metals or polar organic compounds and soils are complex in that they can be highly dependant on various environmental conditions including pH, clay mineralogy, redox conditions, and metal species present. Attempting to set groundwater guidelines for these chemicals for this pathway would involve significant uncertainty, and accordingly, it is recommended that concerns with potential adverse effects on surface soil biota from metals and polar organic compounds in shallow groundwater be addressed on a site-specific basis by analyzing soil samples.

#### 4.2 Nutrient and Energy Cycling

Existing CCME soil quality guideline values were adopted for this exposure pathway. The reader is referred to CCME (2006a) for information on the protocol used to develop the existing guidelines for this exposure pathway.

### 4.3 Soil and Food Ingestion

The ingestion of contaminants in soil and contaminants bioaccumulated from soil into fodder by livestock or wildlife (soil and food ingestion pathway) forms part of the exposure scenario for natural areas or agricultural land use. Where available, existing CCME guideline values for metals for livestock soil and food ingestion were adopted without change. In general, these guidelines specifically considered livestock species, and so were not extrapolated to wildlife. Existing CCME guidelines for polychlorinated biphenyls (PCBs), dioxins and furans, and DDT were also adopted without change for this exposure pathway. However, soil and food ingestion guidelines for these three compounds/groups considered primary, secondary and tertiary consumers, and accordingly the guidelines were considered protective of both livestock and wildlife.

Soil ingestion guidelines were calculated for benzene, toluene, ethylbenzene, and xylenes (BTEX) and petroleum hydrocarbon fractions F1 to F4. Petroleum hydrocarbons and BTEX are not considered to bioaccumulate into potential food species, and accordingly, this guideline considered only soil ingestion for petroleum hydrocarbons. The following

equation was used to calculate the soil ingestion guideline for PHCs. Livestock guidelines were calculated using parameters for a cow, as an economically important livestock species. Wildlife guidelines were calculated using parameters for a meadow vole. The meadow vole was selected since small animals are typically maximally exposed to contaminants. Wildlife soil ingestion guidelines calculated using the meadow vole are expected to be protective for the majority of wildlife species.

$$SRG_{SI-L/W} = \frac{0.75 \times DTED \times BW_{L/W}}{SIR_{L/W} \times BF}$$

Where:

51 2, 11	(mg/kg);
0.75 =	allocation factor (dimensionless);
DTED =	daily threshold effect dose (mg/kg-bw/day);
$BW_{L/W} =$	body weight - livestock or wildlife (kg);
$SIR_{L/W} =$	soil ingestion rate - livestock or wildlife (kg/day); and,
BF =	bioavailability factor (1.0; assumed).

soil remediation guideline for soil ingestion - livestock or wildlife

### 4.4 Offsite Migration

 $SRG_{SI-L/W} =$ 

"Offsite Migration" guidelines are calculated to check that the guideline set for commercial and industrial land use will not result in adjacent more sensitive land being contaminated at levels above the applicable guideline for the sensitive land due to wind and/or water transport of contaminated soil from the commercial or industrial site. The guideline is calculated using the equation provided in the CCME (2006a) protocol:

$$SRG_{OM} = (14.3 \times SRG_A) - (13.3 \times BSC)$$

Where

A similar off-site migration check is calculated for human health using the human direct contact soil remediation guideline for agricultural land use.

#### 5. GROUNDWATER PATHWAYS

This section provides the protocols used to calculate soil and groundwater remediation objectives protective of exposure pathways involving groundwater. The following receptors are considered:

- humans (potable drinking water sourced from groundwater);
- livestock (drinking water from a watering well, dugout, or surface water body potentially connected to contaminated groundwater);
- agricultural crops (irrigated from potentially contaminated groundwater);
- aquatic life (via lateral groundwater transport and discharge into a surface water body); and,
- wildlife (drinking water from a surface water body potentially connected to contaminated groundwater).

In the first three cases, it is assumed that the water well or dugout could potentially be installed at any location, and hence it is assumed that there is no lateral offset between the location where the contaminated soil or groundwater is measured and the receptor.

In the last two cases, a minimum lateral separation of 10 m is assumed between the location where the contaminated soil or groundwater is measured and the receptor (location of surface water body). In cases where contamination is present within 10 m of a surface water body, a Tier 2 or Exposure Control approach is required.

Surface water quality guidelines protective of the above water uses are provided in Table C-11, where available.

#### 5.1 Soil Remediation Guidelines

Soil remediation guidelines for groundwater pathways were calculated using the model and equations from the CCME (2006a) protocol. Soil remediation guidelines for the protection of groundwater are not calculated for inorganic substances due to the uncertainties associated with the partitioning of metals between the adsorbed and dissolved phase as noted above; these substances should be assessed through site-specific groundwater sampling where these pathways are applicable.

#### 5.1.1 Model Assumptions

Assumptions implicit in the model include the following:

- 1. the soil is physically and chemically homogeneous;
- 2. moisture content is uniform throughout the unsaturated zone;
- 3. infiltration rate is uniform throughout the unsaturated zone;
- 4. depletion of the contaminant source is not considered (*i.e.*, infinite source mass);
- 5. flow in the unsaturated zone is assumed to be one dimensional and downward only (vertical recharge) with dispersion, sorption-desorption, and biological degradation;

- 6. contaminant is not present as an immiscible phase product;
- 7. maximum possible concentration in the leachate is equivalent to the solubility limit of the chemical in water under the defined site conditions;
- 8. groundwater aquifer is unconfined;
- 9. groundwater flow is uniform and steady;
- 10. co-solubility and oxidation/reduction effects are not considered;
- 11. attenuation of the contaminant in the saturated zone is assumed to be one-dimensional with respect to sorption-desorption, dispersion, and biological degradation;
- 12. dispersion in groundwater is assumed to occur in the longitudinal and transverse directions only and diffusion is not considered;
- 13. mixing of the leachate with the groundwater is assumed to occur through mixing of leachate and groundwater mass fluxes; and
- 14. dilution of the plume by groundwater recharge down-gradient of the source is not included.

# 5.1.2 Guideline Calculation

The soil remediation guideline protective of groundwater uses is calculated in the same way for all five groundwater uses noted at the start of Section 5, using the corresponding surface water quality guideline as the starting point for each, with 2 exceptions. The first exception is that the lateral offset between the point at which the contaminated soil is measured and the surface water body (parameter "x" in the dilutilon factor 4 equation below) is assumed to be 10 m for aquatic life and wildlife watering, and zero for the other water uses. Therefore, dilution factor 4 is only active for aquatic life and wildlife watering and cannot be applied for other pathways. The second exception is that in the calculation of dilution factor 3 for the potable groundwater pathway only, the average thickness of the mixing zone ( $Z_d$ ) takes the fixed value of 2 m, reflecting the likely minimum screen length for a viable drinking water well. It should be noted that this second point reflects Alberta Environment policy and is not consistent with CCME (2006a).

The model considers four processes:

- 1. partitioning of the substance from soil to pore water (leachate);
- 2. transport of the leachate from the base of contamination to the groundwater table;
- 3. mixing of the leachate with groundwater; and,
- 4. transport of the substance in groundwater down-gradient to a discharge point.

For each of these four processes, a dilution factor was calculated (DF1 through DF4, respectively). DF1 has units of (mg/kg)/(mg/L) or L/kg. The other three dilution factors are dimensionless [units of (mg/L)/(mg/L)]. The overall dilution factor is used to calculate the soil concentration that is protective of groundwater using the following equations:

 $SRG_{GR} = SWQG_{FL} \times DF$ 

 $DF = DF1 \times DF2 \times DF3 \times DF4$ 

Where:	SRG <sub>GR</sub>	=	soil remediation guideline protective of groundwater pathways
			(mg/kg);
	$SWQG_{FL}$	=	corresponding surface water quality guideline (drinking water,
			aquatic life, livestock or wildlife watering, or irrigation) (mg/L);
	DF	=	overall dilution factor (L/kg);
	DF1	=	dilution factor for process 1 (L/kg);
	DF2	=	dilution factor for process 2 (dimensionless);
	DF3	=	dilution factor for process 3 (dimensionless); and,
	DF4	=	dilution factor for process 4 (dimensionless).

#### **Dilution Factor 1**

Dilution factor 1 (DF1) is the ratio of the concentration of a contaminant in soil to the concentration in leachate that is in contact with the soil. This "dilution factor" represents the three phase partitioning between contaminant sorbed to soil, contaminant dissolved in pore water (*i.e.*, as leachate), and contaminant present as soil vapour. DF1 is calculated using the following equation:

$$DF1 = K_{oc} \times f_{oc} + \frac{(\theta_w + H' \times \theta_a)}{\rho_b}$$

Where:

DF1	=	dilution factor 1 (L/kg);
K <sub>oc</sub>	=	organic carbon-water partition coefficient (L/kg);
foc	=	fraction organic carbon (g/g);
$\theta_{\rm w}$	=	water filled porosity (dimensionless);
H′	=	dimensionless Henry's Law constant (dimensionless)
$\theta_a$	=	air filled porosity (dimensionless); and,
$ ho_b$	=	dry soil bulk density (g/cm <sup>3</sup> ).

### **Dilution Factor 2**

Dilution factor 2 (DF2) is the ratio of the concentration of a contaminant in leachate that is in contact with the soil, to the concentration in pore water just above the groundwater table. DF2 takes the value 1.00 (*i.e.*, no dilution) for generic guidelines because it is assumed at Tier 1 that the contaminated soil extends down to the water table.

### **Dilution Factor 3**

Dilution factor 3 (DF3) is the ratio of the concentration of a chemical in pore water just above the groundwater table, to the concentration in groundwater beneath the source. This dilution factor reflects a decrease in concentration as leachate mixes with uncontaminated groundwater. DF3 is a function of groundwater velocity, infiltration rate, source length, and mixing zone thickness. The mixing zone thickness is calculated as being due to two processes: i) mixing due to dispersion, and ii) mixing due to infiltration rate. The equations used are as follows:

$$DF3 = 1 + \frac{Z_d \times V}{I \times X}$$
$$Z_d = r + s$$
$$r = 0.01 \times X$$
$$s = d_a \left\{ 1 - exp\left(\frac{-2.178 \times X \times I}{V \times d_a}\right) \right\}$$
$$V = K \times i$$

$$V = K \times i$$

Where:

DF3	=	dilution factor 3 (dimensionless);
$Z_d$	=	average thickness of mixing zone (m);
V	=	Darcy velocity in groundwater (m/year);
Ι	=	infiltration rate (m/year);
Х	=	length of contaminated soil (m);
r	=	mixing depth due to dispersion (m);
S	=	mixing depth due to infiltration rate (m);
da	=	unconfined aquifer thickness (m);
Κ	=	aquifer hydraulic conductivity (m/year); and,
i	=	lateral hydraulic gradient in aquifer (dimensionless).

Note that the parameter Z<sub>d</sub> takes the fixed value of 2 m for the drinking water pathway, but is calculated as above for all other pathways.

#### **Dilution Factor 4**

Dilution factor 4 (DF4) accounts for the processes of dispersion and biodegradation as groundwater travels downgradient from beneath the source of contamination, and is the ratio of the concentration of a chemical in groundwater beneath the source, to the concentration in groundwater at a distance (10 m for Tier 1 for aquatic life and wildlife watering) downgradient of the source. For distances less than 10 m, a value of 1 should be used for DF4. Consistent with CCME (2006b), the time independent (steady state) version of the equation to calculate DF4 was used:

$$DF4 = \frac{2}{\exp(A) \times [erf(C) - erf(D)]}$$
$$A = \frac{x}{2D_x} \left\{ I - \left(I + \frac{4L_sD_x}{v}\right)^{1/2} \right\}$$

$C = \frac{y + Y/2}{2(D_{y}x)^{1/2}}$
$D = \frac{y - Y/2}{2(D_y x)^{1/2}}$
$L_{s} = \frac{0.6931}{t_{1/2s}} \times \exp(-0.07d)$
$v = \frac{V}{\theta_t R_s}$ $R_s = 1 + \frac{\rho_b K_{oc} f_{oc}}{\theta_t}$
$D_x = 0.1x$
$D_{y} = 0.01x$

Where:

DF4	=	dilution factor 4 (dimensionless);
erf	=	the error function;
А	=	group A (dimensionless);
С	=	group C (dimensionless);
D	=	group D (dimensionless);
Х	=	distance to source (10 m, aquatic life and wildlife watering, 0 m other water uses);
$D_x$	=	dispersivity in the direction of groundwater flow (m);
Ls	=	decay constant (1/year);
v	=	velocity of the contaminant (m/year);
у	=	distance to receptor perpendicular to groundwater flow (0 m);
Y	=	source width (m);
Dy	=	dispersivity perpendicular to the direction of groundwater flow
		(m);
$t_{1/2s}$	=	decay half-life of contaminant in saturated zone of aquifer (years);
d	=	water table depth (m);
V	=	Darcy velocity in groundwater (m/year);
$\theta_t$	=	total soil porosity (dimensionless);
R <sub>s</sub>	=	retardation factor in saturated zone (dimensionless);
$\rho_b$	=	dry soil bulk density (g/cm <sup>3</sup> );
K <sub>oc</sub>	=	organic carbon partition coefficient (mL/g); and,
foc	=	fraction organic carbon (g/g).

### 5.2 Groundwater Remediation Guidelines

It is assumed that a dugout could potentially be constructed at any location on agricultural land and, accordingly, the livestock watering and irrigation water quality guidelines are applicable as groundwater remediation guidelines across all agricultural land. (see Table C-10). Furthermore, it is assumed that a water well could be constructed anywhere within a Domestic Use Aquifer (DUA). Accordingly, drinking water quality guidelines must be applied as groundwater remediation guidelines within the entire DUA . Therefore any modification of these guidelines is considered Exposure Control.

For aquatic life or wildlife watering, it is assumed that there is a minimum 10 m lateral separation between the point of measurement and the surface water body.

## 5.2.1 Model Assumptions

GWRG<sub>GR</sub>=

 $SWQG_{FL} =$ 

Assumptions implicit in the model include the following:

- the soil/aquifer material in the saturated zone is physically and chemically homogeneous;
- decay of the contaminant source is not considered (*i.e.*, infinite source mass);
- the contaminant is not present as a free phase product;
- groundwater flow is uniform and steady;
- co-solubility and oxidation/reduction effects are not considered;
- dispersion is assumed to occur in the longitudinal and transverse directions only and diffusion is not considered; and,
- dilution of the plume by groundwater recharge down-gradient of the source is not included.

### 5.2.2 <u>Guideline Calculation – Aquatic Life and Wildlife Watering</u>

The groundwater remediation guideline protective of aquatic life and wildlife watering is calculated using the following equations.

 $GWRG_{GR} = SWQG_{FL} \times DF4$ 

Where:

groundwater remediation guideline protective of groundwater pathways (mg/kg); corresponding surface water quality guideline (aquatic life, or wildlife

DF4 = dilution factor for process 4 (L/kg).

Dilution factor 4 is calculated in the same way as described in Section 5.1.2

For inorganic substances, the aquatic life surface water quality guidelines have been adopted directly because the processes that affect their transport in groundwater do not meet the model assumptions.

#### 6. OTHER CONSIDERATIONS

In addition to the exposure pathways described above, there are a range of other considerations relating to soil and groundwater contamination management including:

- aesthetics/nuisance issues, including smell, taste, and colour.
- concerns with damage to buried infrastructure (concrete foundations, metal pilings or pipelines, fibre-optic communication cables, power cables, polymer piping and joints, etc.); and,
- safety concerns with the possible build-up of flammable vapours or the exposure of workers to dangerous atmospheres, particularly in confined spaces.

In this document, soil ecocontact guideline values that were derived under the CCME (2006a) protocol and previous versions implicitly incorporated the above soil management considerations in the ecological subsoil guidelines. However, separate soil management limits for petroleum hydrocarbons have been developed according to the *Canada-Wide Standards for Petroleum Hydrocarbons (PHCs) in Soil* (CCME 2007a). Specific considerations were given to free phase formation, exposure to workers in trenches, fire and explosive hazards, effects on buried infrastructure, aesthetic considerations, and other technological factors. Not all factors could be explored quantitatively so some decisions were based on a qualitative assessment of information for the given exposure pathway-receptor combination. Where ecocontact subsoil guidelines developed under the CCME protocol (CCME, 2006a or previous versions) remained reasonable for any other management considerations and where no other information could be obtained, values for the ecocontact subsoil guidelines were adopted as management limits.

Regardless of whether specific numerical values have been specified for the above considerations, the proponent is responsible for ensuring that these concerns are addressed by the site remediation and risk management activities.

### Table C-4. Building Parameters

Notes:

All parameters values from CCME (2006a) except as noted

1. An application factor of 10 is applied to the calculation for hydrocarbons only to account for empirical evidence of reduction in predicted indoor air concentrations. No data are available to support such a correction for non-hydrocarbons, and accordingly no application factor is used for non-hydrocarbons.

2. From CCME (2007a)

### Table C-5. Livestock and Wildlife Receptor Characteristics

Notes:

 $K_{oc} = organic \ carbon \ water \ partition \ coefficient$ 

H' = dimensionless Henry's Law Coefficient

 $D_{air} = diffusion \ coefficient \ in \ air$ 

*na* = *not applicable or not available* 

\*\*\*Value presented is a mean  $K_{d}$  rather than a  $K_{oc}$  since DIPA sorbs to clays in preference to organic carbon.

1. Calculated using the equation  $K_{oc} = 0.41 x K_{ow}$ 

2. PCBs, diozins and furans are groups of chemicals with a wide range of chemical properties. Chemical properties are not provided for these groups.

CCME (1999) refers to the Canadian Environmental Quality Guidelines (CEQG) and updates, including the scientific supporting documents that are summarized in the CEQG.

Sulfolane	0.0097	CCME (2006c)						

Notes:

TRV = toxicity reference value

TDI = tolerable daily intake

TC = tolerable concentration

SF = slope factor

UR = unit risk

1. estimated from the oral TDI assuming an adult body weight of 70.7 kg, and an inhalation rate of 15.8  $m^3/d$ 

CCME (1999) refers to the Canadian Environmental Quality Guidelines (CEQG) and updates,

including the scientific supporting documents that are summarized in the CEQG.

HC = Health Canada

Sum of all subfractions	1	1	1	1				

Notes:

Source: CCME (2007a)

Subfraction distribution in groundwater not required for F3 and F4 due to low aqueous solubility

These values were calculated from the soil subfraction distributions above based on equilibrium partitioning assumptions, see text.
