2015-16 FIRST QUARTER FISCAL UPDATE

Method of Consolidation

A 2015-16 budget was introduced on March 26th (March Budget), but was not passed, as a provincial election was called. The election on May 5th resulted in the formation of a new government. The new government will introduce a revised budget for 2015-16 in October.

The 2015-16 First Quarter Fiscal Update and Economic Statement therefore reports on the same scope, using the same method of consolidation, as presented in the March Budget. This is the same scope and consolidation approach used in the Consolidated Financial Statements in the Government of Alberta Annual Report.

The results of all government departments, funds and agencies, except those designated as government business enterprises, are consolidated on a line-by-line basis. Revenue and expense transactions between consolidated entities have been eliminated.

The accounts of provincial agencies designated as government business enterprises are included on the modified equity basis, computed in accordance with International Financial Reporting Standards applicable to those entities.

Basis of Financial Reporting

The consolidated fiscal summary reports revenue (including gains from disposal of tangible capital assets), expense (including amortization, loss on disposal and write-down of tangible capital assets), and surplus / (deficit).

Revenue and expense are recorded using the accrual basis of accounting. Cash received for goods or services which have not been provided by period end is recorded as unearned revenue.

Transfers received for capital purposes, and donated capital assets, are recorded as "deferred capital contributions" when the cash or asset is received, and recognized in revenue over the related asset's useful life (in effect matching the asset's amortization expense).

Expense includes the province's cash payments towards the unfunded pension liabilities, and the non-cash change in unfunded pension liabilities.

Debt servicing costs include interest payable, and amortization of issue costs and discounts / premiums on debt issues.

Compliance with Legislation

The 2015-16 First Quarter Fiscal Update and Economic Statement has been developed following the March Budget reporting methods. The March Budget was prepared on the basis of repealing the Fiscal Management Act (FMA) and introducing a new act with a different fiscal framework. The FMA gives the President of Treasury Board and Minister of Finance discretion over the form of the report.

The report includes comparisons between the March Budget estimates and first quarter forecasts for the full fiscal year for revenue and expense (including details and categories of each); the surplus / (deficit); cash adjustments; a summary balance sheet; the Capital Plan; and financing (borrowing) requirements. An updated Alberta economic outlook, with associated assumptions, is also provided. The forecasts and outlook were finalized in late July.

As there were no quarterly estimates developed in March, a set of threemonth estimates has been developed to enable a comparison between the actual results for revenue, expense and the Capital Plan and what would have been estimated for the threemonths ending June 30, 2015.

2015-16 FIRST QUARTER FISCAL UPDATE

Fiscal Plan Highlights

Income Statement

A deficit of \$5.9 billion is forecast for 2015-16, \$814 million higher than the March Budget estimate. The change is due primarily to increased disaster assistance expense for wildfires and agricultural support due to dry conditions this year, and to restoration of proposed reductions to major ministry operating expense, as identified in the government plan. Total revenue has increased by \$1 billion, while total expense has increased by \$1.8 billion.

Revenue is forecast to be \$44.3 billion, \$1,020 million higher than estimated in the March Budget.

- The resource revenue forecast has been increased by \$710 million to \$3.6 billion, mainly due to a higher forecast for oil prices, a lower light-heavy oil price differential, and the impact on royalties of a lower Canadian-US exchange rate. These are partly offset by lower natural gas prices and land lease sales.
- The West Texas Intermediate oil price forecast has increased from budget by US\$1.01 to \$55.85 per barrel, as actual prices to the end of July were US\$56.19, compared to the budget forecast of \$47.95. The light-heavy differential forecast has declined by US\$3.94 to \$13.13. The natural gas Alberta Reference Price forecast has decreased 34 cents, to Cdn\$2.60 per gigajoule, and the exchange rate forecast has decreased by 2 cents, to 79.5US¢/Cdn\$.
- The personal income tax revenue forecast has increased \$248 million from the March Budget estimate, to \$11.9 billion. This reflects: the reversal of a \$483 million increase related to the proposed health care levy and charitable donations tax

- credit in the March Budget; an estimate of a \$450 million impact from the introduction of a multiple rate system; a positive prior-years' adjustment of \$158 million as higher 2014 tax year assessment data mean 2013-14 and 2014-15 revenue was under-reported; and an increase of \$123 million from the associated resulting elevated base used to forecast 2015-16 revenue.
- The corporate income tax revenue forecast has increased \$249 million from the March Budget estimate, to \$4.8 billion, due to the rate change.
- Total revenue from other sources is forecast to be \$187 million lower than estimated in the March Budget. This is due to: reversing the proposed \$228 million increase to tuition, land titles and motor vehicle licences fees; a \$30 million reduction in forecast Alberta Capital Finance Authority investment income from lower-than-expected lending activity; a \$31 million increase to the forecast for Climate Change and Emissions Management Fund levies; an increase of \$21 million in federal agriculture support and producer agriculture insurance premiums; and a net \$19 million in other revenue.

Expense is forecast at \$50.2 billion, \$1,832 million higher than estimated in the March Budget.

■ Operating expense is forecast at \$43.4 billion, \$1.4 billion higher, almost entirely due to the restoration of proposed March Budget reductions to Health, Education, Innovation and Advanced Eduation and Human Services. In addition, there are \$16 million in increases, mainly related to expense offset by dedicated revenue.

■ Disaster assistance is forecast to be \$757 million, a \$456 million increase from budget, comprising: \$350 million in agriculture indemnities from drought conditions; \$300 million in wildfire costs; \$6 million in 2013 Alberta flood assistance re-profiled from 2014-15; less \$200 million in unallocated disaster assistance expense contained in the March Budget.

Debt servicing costs are estimated to be \$47 million lower due to lower-than-expected Alberta Capital Finance Authority lending activity, lower rates, and slower borrowing for the Capital Plan.

Balance Sheet

The Contingency Account balance on March 31, 2016 is now forecast to be \$3.5 billion, \$1.1 billion higher than the March Budget estimate. This is due to: \$1.7 billion in cash from 2014-15 results that improved after the budget was prepared but were not known on March 31, 2015; \$0.3 billion lower retained income of funds and agencies (mainly from Agricultural Financial Services Corporation funding the increased agricultural indemnities from its crop insurance fund); partly offset by the \$0.8 billion increase to the deficit, and a \$0.1 billion increase in net cash requirements.

Liabilities for capital projects on March 31, 2016 are forecast to be \$18.3 billion, \$0.6 billion higher than estimated in the March Budget due primarily to a \$0.6 billion increase in Capital Plan spending.

FISCAL PLAN SUMMARY^a

^a Since June 30 2015, additional debt has been issued for capital purposes of Cdn\$700 million and US\$1,250 million (Cdn\$1,646 million).

b Gross borrowing requirements for provincial corporations. Include amounts of maturing debt being re-financed.

Capital Plan Highlights

2015-16 Capital Plan spending is forecast to be \$7.6 billion, an increase of \$642 million from the March Budget. Increases mainly reflect carrying over of 2014-15 projects, including those related to 2013 flood assistance, and re-profiling, partly offset by lower capital grants for the two carbon capture and storage projects.

In addition, \$310 million in planned school funding is being accelerated into 2015-16 from future years.

Direct borrowing for the Capital Plan is now estimated at \$6.2 billion, an increase of \$557 million from budget, due to the higher spending. Cash received for capital purposes and from alternative financing have increased

\$89 million primarily related to the re-profiling of projects from 2014-15. A budgeted \$31 million transfer from the Contingency Account is no longer forecast, while spending self-financed by the SUCH sector has increased by \$27 million.

ECONOMIC OUTLOOK

Economic outlook weakens

The Alberta economy is being hit by low oil prices. Real GDP is now expected to contract by 0.6% in 2015, down one percentage point from the March forecast. The revision stems from weaker-than-expected household consumption, investment and exports (Figure 1). The downturn is forecast to be more protracted than previously expected, with weakness carrying into 2016. Growth in 2016 is now forecast to be 1.3%, down 0.4 percentage points from the previous forecast.

External conditions have weakened since March with another flare-up in the Greek crisis and the recent stockmarket crash and currency devaluation in China. This has weighed on oil prices and heightened uncertainty about the outlook for the Alberta economy. Canada's economy has also slowed substantially since the oil price drop.

Business Sector

Oil prices remain depressed

After remaining steady around US\$60/bbl for most of the second quarter of 2015, WTI has once again tumbled below US\$50/bbl. The forecast for WTI remains near the March forecast

for this fiscal year. The light-heavy oil price differential has narrowed this year, as strong demand for heavy oil, unplanned supply outages and increased market access have supported heavy oil prices. While the differential has widened again recently due to refinery disruptions, these effects are expected to be temporary. The 2015-16 WTI-WCS differential forecast has been adjusted down to US\$13/bbl. The outlook for natural gas prices has weakened, with the Alberta Reference Price expected to average \$2.60 /GJ over 2015-16.

Oil investment down sharply

The sharp decline in oil prices has substantially reduced capital spending in the energy sector. Oil and gas investment is expected to fall over 30% in 2015, with weakness carrying into 2016. Conventional investment has been hit especially hard. Rig activity has declined almost 50% through the first seven months of 2015. As a result, the 2015 forecast for conventional investment has been revised lower. Oilsands investment is expected to fall by less than conventional, as projects started prior to the price drop continue to move ahead. Outside the energy sector, non-residential construction

activity has held up, supported by institutional and government building. Overall, non-residential investment is forecast to fall 18% in 2015, almost 2 percentage points lower than expected in March.

Business activity slumping

Lower oil prices are weighing on production and exports. Although exports remain an important driver in Alberta's economy, the forecast for oil production has been revised lower since March. This mainly reflects unplanned disruptions in oil sands production and the significant slowdown in conventional drilling. In addition, weakness in the oil and gas sector has spread to other sectors of the economy. Alberta machinery manufacturing has fallen 20% since January. This can be mainly traced to declining industrial machinery and equipment manufacturing, which primarily serves the oil industry. Agricultural exports are also expected to fall in 2015 as drought conditions have adversely affected farm production. Overall, real exports are expected to grow 2.3% in 2015, down 1.5 percentage points from March. The 2016 forecast is largely unchanged at 3.0%.

Corporate profits decline

Lower prices are expected to reduce corporate profits by about 50% in 2015. The decline in revenues has caused oil producers to look for cost savings, further eroding profits and margins for suppliers to the oil sector. Weakness is expected to carry into 2016, with corporate profits recovering by 17% in 2016, down from the March forecast of 27%.

Canadian dollar softens

The Canadian dollar has weakened recently as commodity prices declined and the US dollar strengthened. It lost further ground when the Bank of

Source: Alberta Treasury Board and Finance

ECONOMIC OUTLOOK

Canada lowered interest rates by 25 basis points to help stimulate the Canadian economy. The Bank also lowered its forecast for Canadian real GDP, as low oil prices have slowed activity more than expected. The exchange rate forecast for 2015-16 has been lowered by 2 cents to 79.5 US¢/Cdn\$.

Household Sector

Employment forecast on track

The labour market has been fairly resilient amid the sharp decline in oil prices, with employment holding near the December 2014 level. As a result, the forecast for employment growth in 2015 has improved slightly to 0.8%. There are signs, however, that the labour market is weakening. Employment growth has steadily declined, the number of jobs available has dwindled, and the unemployment rate jumped to 6.0% in July (Figure 2). Labour markets are expected to weaken further in the second half of the year and into next year. The 2016 labour outlook remains largely unchanged from March: employment is expected to grow a modest 0.8% in 2016, with the unemployment rate averaging 5.9%.

Earnings growth slows

Earnings have been slumping alongside employment. Year-over-year growth in average weekly earnings (AWE) slowed to only 0.2% in May, and is now up only 1.8% year-to-date. Primary household income, a driver of personal income tax, is expected to grow by just 2.5% in 2015 and 3.3% in 2016. This is down markedly from the nearly 8% average growth over the last 4 years.

Households curtail spending

Weak labour markets and uncertainty about the economy have prompted households to restrain spending more than expected. Retail sales have fallen 2.1% year-to-date, pulled down by lower gasoline prices and vehicle sales. Consumer spending is still expected

to add to real GDP growth in 2015, but by less than previously forecast. CPI inflation has evolved as expected, averaging 0.8% year-to-date, and on target for the forecast of 0.9% inflation in 2015.

Mixed housing performance

The new and resale housing markets diverged through the first half of 2015. The economic downturn and ongoing uncertainty hindered resale housing across Alberta, especially in Calgary. Sales of existing homes in the province dropped sharply in January and remain 21% lower than last year. In contrast, residential construction has been a source of strength in the Alberta economy, carrying momentum from 2014. Housing starts have been buoyed by multi-unit construction, while single starts have declined. Residential permits, however, suggest momentum is slowing, with housing construction expected to be substantially weaker in the second half of 2015. Housing starts are forecast to be 33,600 in 2015, declining to 29,800 in 2016.

Migration continues at slower rate

Population growth has been resilient, with people continuing to move to the province despite the slowdown. Alberta

welcomed 7,723 people from outside the province in the first quarter of 2015, as positive interprovincial migration offset losses of non-permanent residents. While net inflows remain positive, they have slowed from the record pace set in 2013 and 2014. The forecast for 2015 population growth is unchanged at 2%.

Risks to the outlook

Risks to the Alberta economy remain elevated, reflecting uncertainty about the path of oil prices and global economic conditions.

- The main risk is a prolonged period of low oil prices stemming from an oversupplied market. Should oil prices fail to improve, the Alberta economy could face prolonged weakness.
- Increased uncertainty about the economy could further erode consumer and business confidence, reducing spending.
- Lower-than-expected population growth would put downward pressure on housing markets and consumer spending.
- On the upside, a sudden improvement in oil prices would improve Alberta's outlook.
