ACTUAL RESULTS

For the first six months of 2013–14

Method of Consolidation

The *2013-14 Second Quarter Fiscal Update and Economic Statement* reports on the same scope, using the same method of consolidation, as presented in *Budget 2013*.

The results of all government departments, funds and agencies, except those designated as government business enterprises, are consolidated on a line-by-line basis. Revenue and expense transactions between consolidated entities have been eliminated.

The accounts of provincial agencies designated as government business enterprises are included on the modified equity basis, the equity being computed in accordance with International Financial Reporting Standards applicable to those entities.

The accounts of the Alberta Innovates corporations and the Crown-controlled SUCH sector organizations such as school boards, universities, colleges, technical institutes, and Alberta Health Services that are controlled by the government are not included in this fiscal summary. These Crown-controlled entities are consolidated on a line-by-line basis in the consolidated financial statements forming part of the *Government of Alberta Annual Report*.

Basis of Financial Reporting

The consolidated fiscal summary reports revenue (including gains from disposal of tangible capital assets), expense (including amortization, loss on disposal and write-down of tangible capital assets), and surplus / (deficit).

Revenue and expense are recorded using the accrual basis of accounting. Cash received for goods or services which have not been provided by period end is recorded as unearned revenue.

Transfers received for capital purposes, and donated capital assets, are recorded as revenue as the cash is used to acquire capital assets and the donated assets are added to the balance sheet. The accounting policy followed in the Consolidated Financial Statements is to record a “deferred capital contribution,” similar to a liability, when the cash or asset is received, and to recognize the revenue over the related asset’s useful life (in effect matching the asset’s amortization expense).

Expense includes the province’s cash payments towards the unfunded pension liabilities. Expense excludes the change in the unfunded pension liabilities, which is a non-cash expense that does not affect borrowing requirements.

Debt servicing costs include interest payable, and amortization of issue costs and discounts / premiums on debt issues.

Compliance with Legislation

The *Fiscal Management Act* requires reporting on the actual results of the fiscal plan for the first six months of the fiscal year (April 1 to September 30), on or before November 30. The Act gives the President of Treasury Board and Minister of Finance discretion over the form of the report.

The *2013-14 Second Quarter Fiscal Update and Economic Statement* provides comparisons between the six month estimates and actual results for: revenue and operational expense; the operational surplus / (deficit); the Capital Plan; financing (borrowing) requirements. Also included are an estimate for the year-end balance of the Contingency Account, to indicate the Province’s net financial position, and updated Alberta and global economic outlooks, with associated assumptions.

Under the *Fiscal Management Act*, operating expense increases, excluding those for dedicated revenue-operating expense, collective bargaining or other remuneration settlements, or settlements with First Nations, are limited to 1% of total budgeted ministry operating expense. Actual operational expense for a fiscal year also cannot exceed operational revenue plus any amounts allocated from the Contingency Account.

This report, and results for the first six months of 2013-14, are in compliance with the requirements of the *Fiscal Management Act*.

2013-14 SECOND QUARTER FISCAL UPDATE

Operational Plan Highlights

Actual results for the first six months of 2013-14 produced an operational surplus of \$1.1 billion, \$1.1 billion higher than the *Budget 2013* estimate, due to a \$1.4 billion increase in operational revenue, partially offset by a \$244 million increase in expense.

Operational Revenue for the first six months was \$20,347 million, \$1,381 million higher than expected.

- Resource revenue was \$4,482 million, \$960 million higher, mainly due to higher oil prices, partly offset by lower natural gas prices and land lease sales.
- Heritage and endowment fund investment income was \$310 million greater, due to strong equity markets.
- Personal income tax revenue was \$153 million higher, due to increased 2012 tax year assessments and strong population growth.

- Other notable revenue variances after six months include: increases of \$52 million in agriculture insurance premiums, \$50 million in investment management fees, and \$31 million in net liquor income; and decreases of \$306 million in corporate income tax, due to timing of instalments, \$64 million in federal infrastructure transfers, mainly due to slower-than-expected municipal applications, and \$43 million in miscellaneous revenue, mainly from lower Fort McMurray land sales.

Operational Expense for the first six months was \$19,271 million, \$247 million higher than expected, due primarily to increased disaster / emergency assistance for flooding.

- Operating expense was \$134 million lower than expected, mainly from delayed grants to Alberta Health Services, partly offset by increases

relating to timing of grants for policing and to school boards, and for social programs, crude oil marketing costs, agriculture indemnities and external investment management fees.

- Disaster / emergency expense was \$443 million higher than expected, due to the provision of \$351 million for flood assistance and to increased forest fire-fighting costs.

The Contingency Account balance on September 30, 2013 was \$2,413 million, and by year end the balance is estimated at about \$2.5 billion. The 2013-14 year-end operational results could range from a surplus of \$250 million to a deficit of \$250 million. The six month results include only a small portion of expected flood assistance expense, but no expected disaster recovery federal revenue.

OPERATIONAL PLAN SUMMARY^a

(millions of dollars)

	2013-14				2012-13	
	Budget	6 Month Estimate	6 Month Actual	Change from Estimate	6 Month Actual	Change

Operational Surplus / (Deficit)	(451)	(58)	1,076	1,134	(61)	1,137

^a For fiscal policy purposes under the *Fiscal Management Act*. Does not include revenue or expense of Crown-controlled SUCH sector organizations or Alberta Innovates corporations, or changes in pension liabilities. 2013-14 Budget revenue and operating expense have been increased by \$120 million, reflecting changed accounting policy for an allowance for doubtful accounts for corporate income tax, now included in expense instead of being deducted from revenue. 2012-13 six month Actual revenue and operating expense have been increased by \$18 million, reflecting changed accounting policy for crude oil transportation and marketing costs, now included in expense instead of being deducted from crude oil royalty revenue.

Capital Plan Highlights

Capital Plan actual results for the first six months of 2013-14 were essentially on track with the overall estimate in *Budget 2013*.

- Actual six month Capital Plan spending was \$2,417 million, \$72 million lower than expected. While there are variances in most areas, these mainly reflect changes to timing of project progress. No projects have been cancelled.

- The \$155 million increase in Transportation is mainly from accelerated progress on ring roads. The remainder of the changes reflect re-profiling of project cash flows both within the current year and from the 2012-13 fiscal year. These will likely adjust somewhat over the rest of 2013-14.

- Revenue for capital purposes was \$55 million lower than estimated,

mainly from fewer-than-anticipated applications from municipalities under the Federal Gas Tax Fund and to delayed Canada ecoTrust spending.

- Direct borrowing for the Capital Plan was \$151 million higher than expected, due mainly to increased financing needs for projects re-profiled from 2012-13 and to market opportunities. The withdrawal from the Capital Plan financing account was consequently \$169 million lower.

ECONOMIC OUTLOOK

Population surges as strong expansion continues

The Alberta economy continues to charge ahead, with few signs of slowing in the short term. The province is set to be among Canada's growth leaders again in 2013. Real GDP is now expected to expand by 3.3% this year (Figure 1), up from the forecast at *First Quarter* and *Budget 2013*. This comes after Alberta led all provinces in employment and real GDP growth in 2011 and 2012. Economic growth for 2014 has also been revised up since *Budget 2013* to 3.5%, mainly reflecting flood reconstruction activity.

The oil sector remains a key driver, with high levels of investment and large increases in production supporting economic growth.

A thriving labour market has lured people to Alberta in droves; 105,200 net migrants landed in Alberta during census year 2013. This has spurred construction and consumer spending, while keeping wage growth contained.

Another key development has been the southern Alberta floods. The floods resulted in extensive property damage,

as well as supply disruptions in June and July. However, in terms of economic activity, spending on reconstruction is expected to boost employment, wages and real GDP in 2013 through 2015.

Alberta Household Sector

Population leaps past 4 million

Alberta is now home to over 4 million people, thanks to a 3.5% jump in the population during the census year ending July 1, 2013. The province has not seen growth of this magnitude since 1981. In 2014, the population is expected to expand at a solid, albeit more moderate, pace of 2.6%.

Job growth picks up, labour market stays balanced

Job opportunities have attracted people to Alberta. Employment growth has been stronger-than-expected, and is now forecast at 2.6% in 2013, roughly matching last year's pace. Growth accelerated in the third quarter of 2013, with 33,800 jobs added. Normally job growth of this magnitude would result in a large dip in the unemployment rate; however, the surge in population has helped keep the labour market balanced (Figure 2). The unemployment rate has stayed in the 4.3% to 5.0% range this year, and job vacancies have held fairly steady. Likewise, pressure on weekly earnings have been contained. The forecast for primary household income, a driver of personal income tax revenues, is roughly unchanged from the *First Quarter* at 6.0%; however, it is up from the *Budget 2013* forecast of 5.4% on stronger-than-expected job growth.

Housing bucks national trend

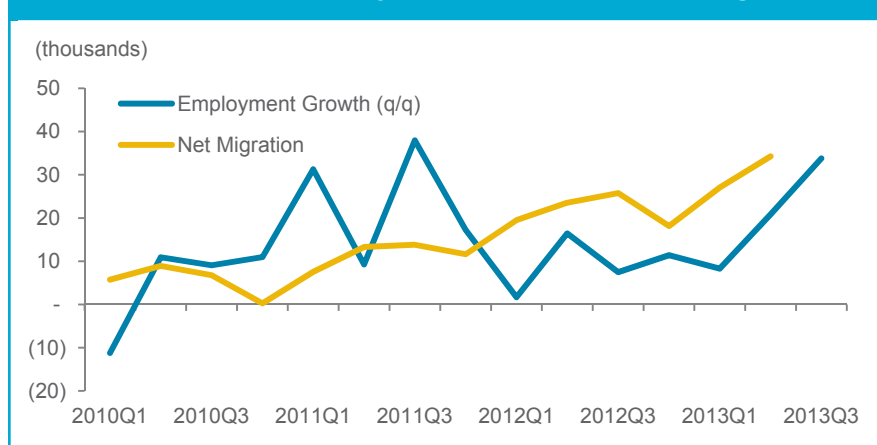

Alberta is on pace to see another increase in residential investment in 2013 and again in 2014. The housing market has tightened this year, with the sales-to-new listing ratio rising, and the number of new unoccupied homes trending lower. New migrants and the

ECONOMIC OUTLOOK

Alberta floods have buoyed housing demand and allowed Alberta to buck the national slowing trend in housing.

Consumers in the drivers seat

Spending by households accounted for about a third of Alberta's economic growth last year. Households will make another solid contribution this year, thanks to record in-migration and a strong labour market. Real consumer spending is forecast to increase by 4.9% in 2013 and by 4.1% in 2014. A major contributor has been vehicle purchases. Historically volatile, vehicle sales have been persistently strong in Alberta. Some of the recent strength is likely due to flood-damaged vehicles being replaced. Consumers are spending in a low inflation environment; inflation has averaged only 1.4% so far this year.

Alberta Business Sector

Oil price forecast revised higher

World oil prices increased markedly over the summer due to Middle East tensions, particularly in Syria. While an easing of tensions has caused prices to retreat, the North American oil price (WTI) has remained above levels forecast at *Budget 2013*. Moreover, additional pipeline capacity between Cushing, OK and the US Gulf Coast has reduced the gap between the world Brent price and WTI since early 2013. As a result, the WTI forecast has been upgraded to US\$98.96/bbl for this fiscal year. The differential between Alberta's heavy oil benchmark, Western Canada Select (WCS), and WTI remains highly volatile due to a lack of spare transportation capacity.

Loonie dips

The Canadian dollar has weakened against the US dollar since early 2013. Stronger US economic news has raised expectations that the Federal Reserve will taper its Quantitative Easing program. Meanwhile, the Bank of Canada has signalled a softer

stance on interest rate increases. Both developments have contributed to the Canadian dollar weakening and a lower exchange rate forecast of US\$97.5/CDN\$ for 2013-14.

Exports rebound

Stronger oil prices over the summer have provided a boost to the value of Alberta's international exports. Energy exports, which comprise about two-thirds of Alberta's total, jumped 17% in the third quarter of 2013 over the same time last year. Higher prices have also lifted Alberta's manufacturing shipments, notably sales of refined petroleum products.

Production has also resumed after a series of supply disruptions in the spring, including refinery maintenance shutdowns and delays at oilsands facilities. Oil exports were disrupted by flooding in June, but have since bounced back. Amid ongoing pipeline constraints, an increasing amount of oil is now transported by rail. In the agriculture sector, growing conditions have been favourable, with production on pace to hit a new record in 2013 for a number of crops, including wheat and canola. Exports will remain a key driver of Alberta's economic growth in 2014, as bitumen production continues to ramp up.

Flood reconstruction having an impact

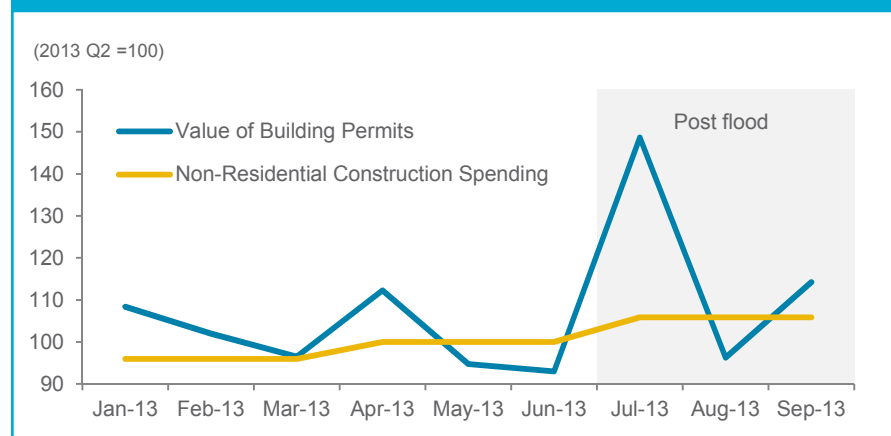

Reconstruction is lifting building activity. Calgary's building permits spiked the month after the flood (Figure 3), and non-residential construction accelerated in the third quarter. Flood reconstruction is expected to add to Alberta's economic growth in 2014 before gradually tapering in 2015 and beyond. With permits up 20% in the first three quarters of 2013, strong construction activity is expected to continue.

External Risks

Global economic conditions remain weak (see pg. 14). Alberta's outlook is subject to a number of external risks:

- With a lack of spare pipeline capacity, small transportation and refinery disruptions can result in large swings in the price of oil produced in Alberta.
- A further slowdown of emerging market economies would weigh on global demand and oil prices.
- Stronger-than-expected US economic growth remains the main upside risk to the forecast.
- A further drop in the Canadian dollar could provide a further boost to the value of Alberta exports.

REVENUE IMPACTS

Impact of recent developments on government revenue

Royalty revenue forecast edges higher

The revenue outlook for 2013–14 has been revised higher from *Budget 2013* and *First Quarter*, mainly reflecting a higher-than-forecast price environment.

Since *Budget 2013* and *First Quarter*, factors that have raised the royalty income forecast for 2013–14 include:

- A higher forecast for crude oil prices in North America (i.e., West Texas Intermediate) to US\$98.96/bbl (Figure 1). The world price (i.e., Brent) has been supported by concerns of possible disruptions to Middle East supply, while the Brent-WTI differential has narrowed since early 2013.
- For 2013-14, there has been a downward adjustment to the forecast differential between WTI and the price Alberta oil sands producers receive for bitumen (i.e. Western Canada Select). This reflects strong demand for Alberta heavy crude, delays in oil sands projects reaching full production, and some alleviation of transportation constraints. Based on actual prices so far in 2013-14, this differential is now forecast at 21% of WTI, down from 23% at *First Quarter* and from 27% at *Budget 2013*.
- The forecast for the Canadian dollar has fallen marginally to 97.5 US¢/Cdn\$, lower than the *Budget 2013* and *First Quarter* forecasts. A lower Canadian dollar boosts royalty revenue.

Despite stronger production, natural gas royalties have been adjusted downward slightly due to a lower forecast price, increased costs of processing gas, and higher costs of the Natural Gas Deep Drilling Program.

Alberta land sales continue to be projected lower than *Budget 2013* due to a lower price received per hectare and industry requesting less land be posted for sale.

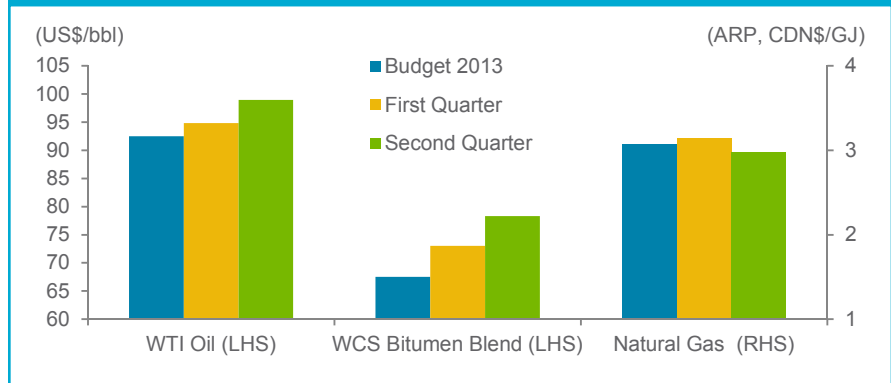

Income tax forecast improves slightly

Alberta's economy continues to perform well. Solid increases in wages and employment have buoyed household income. As a result, personal income tax revenue is expected to post another solid increase this fiscal year. The forecast for 2013-14 personal income tax revenue has been revised higher from *Budget 2013* based on continued strong 2012 preliminary tax assessment data, as well as an upgrade to the primary household income forecast.

The business sector is benefiting from Alberta's strong economic growth as well as stronger-than-expected energy prices. However, flood related losses and an upward revision to forecast wage growth is expected to limit overall growth in corporate profits in 2013, as measured by net corporate operating surplus. The forecast for 2013–14 corporate income tax revenue is up from *Budget 2013*, based on strong year-to-date cash collections.

There are several risks facing Alberta's government revenue forecast. On the downside, a reversal of the economic recovery in Europe or a further slowdown in emerging market growth could cause energy prices to slump. Pipeline project delays or a faster-than-anticipated increase in US oil production would also put downward pressure on energy prices. On the upside, increased supply disruptions in the Middle East or stronger-than-expected US economic growth could cause oil prices and incomes to rise.

GLOBAL ECONOMY

The global recovery forever on the horizon

Global growth in the wake of the 2008-09 recession has failed to live up to expectations. In October, the International Monetary Fund (IMF) downgraded its 2013 forecast for the sixth consecutive time (Figure 1). Recent weakness has originated from emerging markets, where growth has slowed, as well as a stagnant Eurozone economy.

The IMF is not alone in downgrading its forecast. Many forecasters have repeatedly predicted growth to return to pre-crisis levels only to be disappointed when growth fails to meet expectations. For most economies, growth since 2010 has been well below the 2000-07 average and is trending downward (Figure 2). One possibility is that conditions are not as favourable as they once were, and forecasters have not adjusted to the new reality. A second possibility is that forecasters were correct to expect a rebound, but have not got the timing right. The slack in the economy cannot last forever, and when it is finally taken up, the long-predicted rebound in growth will occur. Both of these possibilities are explored below.

Emerging market growth downshifts

Emerging markets, both before and since the recession, have been drivers of the global economy. However, growth in these economies has been weakening and may never again reach the lofty levels achieved in the 1990s and early 2000s. This may be a blessing in disguise. Emerging markets were able to achieve such high growth because they were in the early phase of development and had so much to gain. As their economies developed, additional gains were harder to achieve.

China, for example, averaged 10.7% annual growth between 1991 and 2007. In each year since, growth has fallen below this mark, falling to a 13 year low of 7.8% in 2012. China was able to achieve such high rates of growth through urbanization, improved educational attainment and massive capital investment. Each of these factors is subject to diminishing returns, which may have contributed to the slower growth of late. Moreover, in the face of weak demand in advanced economies, Chinese growth has rotated

away from exports and investment, and towards domestic consumption. This rebalancing has hurt overall growth in emerging markets, but provides the global economy with a much-needed source of demand going forward.

Baby boomers are exiting the labour force

Advanced economies have benefited from an expanding labour force made possible by greater labour force participation among women and by baby boomers reaching their prime

FIGURE 1. 2013 Real GDP Growth Forecast by Date

GLOBAL ECONOMY

working years. The participation rate, the share of the working-age population employed or actively seeking work, rose as a result, allowing for more growth than if the rate was unchanged. Going forward, the participation rate for women will not contribute as much to growth, as it has largely converged to that of men. Moreover, now that baby boomers are beginning to retire, a major source for growth will start to detract from it.

This trend is unfolding in the U.S. The participation rate has been declining since 2000, recently falling to a 30-year low (see Figure 3). A lower participation rate helps explain why the employment-to-population ratio has barely budged despite the unemployment rate

falling 2.7 percentage point from its recessionary peak. More people are working, but the labour force makes up a smaller share of the total population.

Aging is does not fully explain the drop in the US participation rate. The recession induced many to leave the labour force. These people will likely return as conditions improve. However, increasing labour force participation can no longer be counted on to deliver growth like it did in the past.

Cyclical factors matter too

Not all the weakness in global growth is due to structural changes. The importance of the economic cycle is highlighted by inflation, which has declined steadily throughout most of the

advanced world since 2011. Weak price growth is a symptom of weak demand, the return of which would increase both output growth and inflation.

In the latest data, year-over-year inflation was 1.1% in Canada, 0.9% in the U.S. and 0.7% in the Euro Area. In Canada's case, inflation has trended downwards since May 2011, and has been below the Bank of Canada's 2% inflation target since April 2012. Over this period, the Bank's inflation forecasts have been repeatedly revised down (Figure 4).

No country has struggled with deflation and weak growth more than Japan for much of the last 20 years. Nevertheless, Japan is one of few advanced economies where inflation has been increasing, thanks to aggressive policy actions. Over the last year, Japan has undertaken unprecedented monetary stimulus supported by stepped-up fiscal stimulus. Though still only 1.0%, Japanese inflation has jumped 1.9 percentage points since March. The added stimulus has also impacted real GDP growth, which has averaged 3.3% (annualized) over the first three quarters of 2013. Japan is one of few countries for which the IMF has increased its 2013 growth forecast.

Conclusion

The global economy has been slow to come out of the 2008-09 recession. Elevated unemployment and low inflation are evidence of weak demand. When demand improves, so too will growth. However, some of the engines of growth during the past 50 years have been running out of steam. China cannot sustain double-digit growth indefinitely, and the baby boomers are leaving the labour force in growing numbers. Unless new sources of growth emerge, growth will likely be lower than in the past.
