### The Region at a Glance

The North Central region of Alberta covers an area of 13,780 square kilometers, larger in size than the state of Connecticut. The region accounts for 2.2% of Alberta's land mass and for 1.2% of Alberta's population. According to Statistics Canada's latest estimates, the region's population totaled 42,200 in 2010. The region's unemployment rate was 6.2% in 2010, the same rate as in 2009. According to the latest federal Census, the region's population totaled 39,841 in 2006.

The region's largest industry on an employment basis is agriculture, accounting for almost 15% of total employment, followed by retail trade, oil and gas, construction, education, and health care and social assistance at between 8% and 9% each. The region also has a sizeable manufacturing base, which is concentrated in the forest product and food product sectors. The fastest growing industry between Census years 2001 and 2006 was the oil and gas sector, which increased its employment by two-thirds. Employment in the agricultural sector, which has been on a long and steady decline in the province, fell by 21% in the North Central region between the two Census years.

The North Central region is one of Alberta's top agricultural regions. It accounts for 6.3% of the province's total number of farms, and is one of the province's largest producers of oats and alfalfa and hay. It is also the province's third largest producer of forest products, such as lumber and pulp. According to personal income taxfiler data the average individual income was \$29,100 per taxfiler in 2007, a large 43% increase from 2003. Average income for couples was \$86,350 in 2007, a 45% rise from 2003.

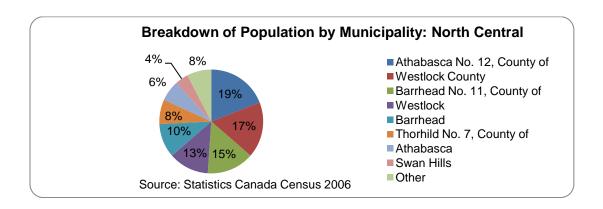

#### North Central Region's Share of Alberta (%)

Although very few current indicators are available on a regional basis, it is clear that the global economic crisis has also impacted this region: for instance the number of Employment Insurance beneficiaries receiving regular benefits in North Central Alberta increased by 156% between 2008 and 2009. However, the number declined by about 40% between December 2009 and September 2010.

### Major Municipalities

The largest municipality in the North Central Region, according to the 2006 Statistics Canada Census, was the County of Athabasca with a population of 7,592<sup>1</sup>. According to the same census, the same municipality had the highest population growth between 2001 and 2006 - an increase of 6.6% or 71 residents between 2001 and 2006<sup>2</sup>.

Economic Indicators: North Central Region											
Major Municipalities *	Status	2006 Population	2001 Population	5 Year % Change	1996 Population	10 Year % Change					
Athabasca No. 12, County of	Municipal District	7,592	7,521	6.6%	7,415	11.3%

<sup>\*</sup> Top 10 cities, towns, villages and municipal districts in region, based on population in latest census year

<sup>&</sup>lt;sup>1</sup> Note: the Census under-estimates the overall population totals for any region or municipality as some people are not counted. The reasons for this under-coverage can range from some households not receiving a census questionnaire to individuals not being included in the questionnaire completed for a household.

<sup>&</sup>lt;sup>2</sup> Numerical differences between the federal and municipal censuses may be ascribed to slight variations in the definition of "usual residence," as well as how "shadow populations" are treated. While municipalities define the "shadow population" as "temporary residents of a municipality who are employed by an industrial or commercial establishment in the municipality for a minimum of 30 days" and include them in their official population numbers if they consist at least 10% of the municipality's population or a minimum of 1,000 individuals, the shadow population of transient workers is not accounted for in population counts conducted by Statistics Canada.

#### **Demographics**

According to the most recent Statistics Canada Census, the population of the North Central Region was 39,841 in 2006 or 1.2% of Alberta's total population. This was a 2.0% increase from the Census estimate of 2001 and a 1.9% increase from the 1996 Census estimate. The Census indicates that, on average, the North Central region's population is somewhat older than the provincial average. This may prove to be a challenge for the smaller cohort in the current prime working age group, as they are increasingly required to sustain the larger cohort of the retiring age group through higher productivity levels.

<b>Economic Indicators: North Central Region</b>										
	2006	2001	1996							
Census Population <sup>3</sup>	39,841	39,065	39,078							
% of Provincial Total	1.2%	1.3%	1.4%							
Population Components	2006	2001	1996							
Age Group: 0 - 14 (%)	19.5	20.8	23.1							
Age Group: 14 – 24 (%)	12.6	13.4	N/A							
Age Group: 25 – 44 (%)	24.0	26.5	N/A							
Age Group: 45 – 64 (%)	28.5	25.0	N/A							
Age Group: 65+ (%)	16.2	15.4	14.2							
Dependency Ratio <sup>4</sup>	55.5	57.1	59.3							
Old Age Dependency Ratio 5	25.2	24.3	22.6							
Source: Statistics Canada, Censu	Source: Statistics Canada, Census 1996, 2001, 2006									

<sup>&</sup>lt;sup>3</sup> See below paragraph about the under-coverage problems of Census population estimates

<sup>&</sup>lt;sup>4</sup> Dependency Ratio: The percentage of the population below the age of 15(Child) and over the age of 64 (Elderly) divided by the number of adults (15-64). This is the population of children and elderly that are dependent on the adult population for economic needs.

<sup>&</sup>lt;sup>5</sup> Age Dependency Ration: The percentage of the population over the age of 64 (Elderly) divided by the number of adults (15-64). This is the population that is dependent on the adult population for economic needs.

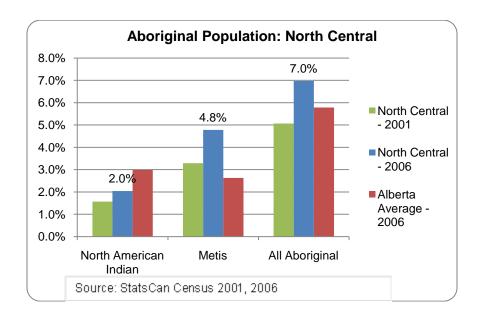

Although the Census provides the most detailed and accurate information at a single point in time on the demographic, social and economic conditions of the population, the Census under-estimates the overall population totals for any region as some people are not counted. The reasons for this under-coverage can range from some households not receiving a census questionnaire to individuals not being included in the questionnaire completed for a household. Therefore, the below presented post-censal estimates should be used as the official population estimates for the region.

Population Estimates – North Central Region									
2010 2009 2008 2007 200									
Total Population (Thousands)	42.2	42.3	42.1	41.7	41.0				
Share of Provincial Total (%)	1.1%	1.2%	1.2%	1.2%	1.2%				
Source: Statistics Canada – estimates as of July 1 of each year									

According to the post-censal estimates, the region's population increased by 1,200 or 2.9% between 2006 and 2010, compared with 8.8% growth at the provincial level. The region's share of Alberta's population fell to 1.1% in 2010.

### **Aboriginal Population**

According to the 2006 federal Census Aboriginals made up 7% (2,735 individuals) of the population of the North Central Region, 2% of which defined themselves as North American Indians and 4.8% as Metis.  $^6$ 

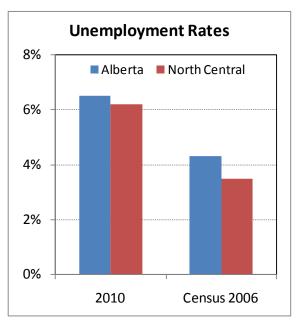

<sup>&</sup>lt;sup>6</sup> **Aboriginals:** According to Statistics Canada Aboriginal identity is an indicator of a person's affiliation with an Aboriginal group that is North American Indian, Metis or Inuit. Non status and Status/Treaty Indians may be included in this group.

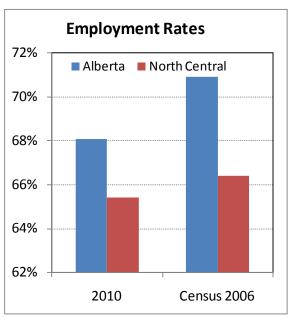

**Metis:** Registry and membership with the Metis Nation of Alberta is based upon a definition of Metis, which was passed at the Annual General Assembly held in Edmonton in August 2003. "Metis means a person who self-identifies as a Metis, is distinct from other aboriginal peoples, is of historic Metis Nation ancestry, and is accepted by the Metis Nation."

**Registered (Status) or Treaty Indian Indians:** According to Statistics Canada Registered Indians (also referred to as "status Indians") refer to those persons registered under the *Indian Act* while Treaty Indian refer to people who are registered under the *Indian Act* and who belong to an Indian Band or First Nation that signed a treaty with the Crown. Registered/Treaty Indians may be classified as on or off reserve indicating their place of residence.

#### **Labour Force Characteristics**

According to Statistics Canada's Labour Force Survey (LFS), the North Central region's employment rate<sup>7</sup> for the working age population of 15 years and older was 65.4% in 2010 and the participation rate<sup>8</sup> was 69.7%. By comparison, Alberta's employment and participation rates were higher at 68.1% and 72.9%, respectively. The region's unemployment rate was 6.2% in 2010, the same rate as in the previous year. This rate is lower than the provincial average of 6.5% for 2010.

Labour Force Characteristics – North Central Region										
	2006	2007	2008	2009	2010					
Participation Rate: 15 years and older (%)	63.5	68.0	68.1	68.3	69.7					
Unemployment Rate: 15 years and older (%)	n/a	n/a	4.9	6.2	6.2					
Employment Rate: 15 years and older (%)	61.3	65.1	64.7	64.0	65.4					

Source: Statistics Canada, Labour Force Survey N/A= data suppressed, insufficient sample size

Statistics Canada cautions the reader that the regional Labour Force Survey estimates may be subject to large year-toyear fluctuations, especially for the smaller regions, due to sample size problems and there not being any population control totals for non-standard geographies such as this region.

Timely labour force estimates from the Labour Force Survey (LFS) are generally not reliable for small areas such as this region<sup>9</sup>. Statistics Canada therefore suggests to

<sup>7</sup> The employment rate measures the proportion of the adult population that is employed. Employment Rate = (Employed / Population 15+)\*100. High labour utilization traditionally accompanies strong economic activity.

<sup>&</sup>lt;sup>8</sup> The participation rate measures the proportion of the adult population that is in the labour force. Participation Rate = (Labour Force / Population 15+)\*100. High labour participation is an effective indicator of the level of engagement among the working age population and traditionally accompanies strong economic activity.

<sup>&</sup>lt;sup>9</sup> Due to sample size problems and there not being any population control totals for non-standard geographies.

only use the rates, such as unemployment rate and participation rate, from the LFS rather than the levels, such as total employment and working age population. As a result, Census estimates are used for the following discussions on employment level estimates.

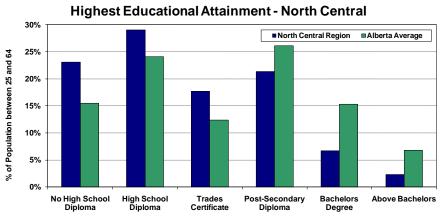

Between 2001 and 2006, the number of people employed in Alberta grew by 14.7% or by 239,800. Over the same period, employment in the North Central region grew by an estimated 900 or 4.5%. In 2006, the North Central Region made up 1.2% of Alberta's working age population (15+ years), and the region's increase in employment between 2001 and 2006 accounted for 0.4% of all new jobs created in Alberta over that period.

Labour Force Characteristics - North Central Region								
	2006	2001						
Population: 15 years and older (Thousands)	31.5	30.1						
Labour Force: 15 years and older (Thousands)	21.6	21.1						
Employment: 15 years and older (Thousands)	20.9	20.0						
Unemployment: 15 years and older (Thousands)	0.7	1.1						
Participation Rate: 15 years and older (%)	68.7	70.0						
Unemployment Rate: 15 years and older (%)	3.5	5.1						
Employment Rate: 15 years and older (%)	66.4	66.5						

Source: Statistics Canada Census, 2001 and 2006

Statistics Canada cautions the reader that the regional Labour Force Survey estimates may be subject to large year-to-year fluctuations, especially for the smaller regions. Because of these data problems, census data for 2001 and 2006 were used for all indicators for the smaller regions such as the North Central Region and data for these indicators for the other years are not included in the tables.

According to the 2006 census, the level of educational attainment is lower for this region than for Alberta. For the working aged population of between 25 and 64 years, 30.3% had a post-secondary degree or diploma, compared with 48.1% for all of Alberta. However, the region does have a larger share holding a trades certificate: 17.6% in the region vs. 12.4% in Alberta. 23.1% of the region's working age population did not finish high school, higher than the Alberta average of 15.4%.

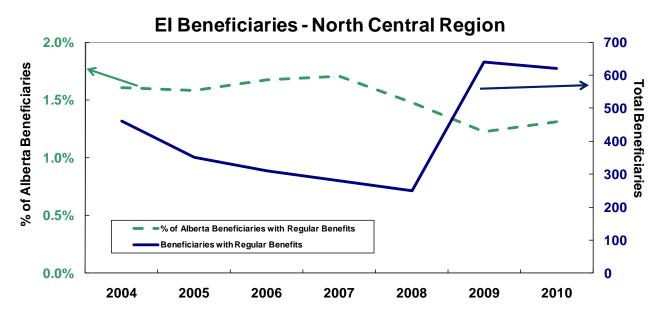

**Highest Educational Attainment** 

### **Employment Insurance Beneficiaries**

In 2010, 620 people received regular Employment Insurance (EI) benefits<sup>10</sup> in the North Central region, a 3% decrease from the 2009 total of 640<sup>11</sup>. Over the same period, the number of EI recipients fell by 9% in Alberta. As a result, the region's share of Alberta EI recipients rose slightly to 1.3%. Between February 2010 and February 2011, the number of regular beneficiaries fell by an estimated 14% in the region.

The total number of income beneficiaries<sup>12</sup> with both regular and special benefits, such as for sickness or parental leave, fell at a lower rate of 2% between 2009 and 2010 as all of the decrease in income beneficiaries was the result of the decrease in the number of regular beneficiaries, rather than those receiving special benefits.

Note: although this measure provides a useful gauge of unemployment it is an imperfect measure, as it excludes self-employed workers and individuals who were unemployed for more than 12 months. At the Canadian level, the El beneficiaries-to-unemployed ratio was fairly stable over time prior to the recession at between 40% and 45%. In Alberta, the ratio fell gradually during the economic boom years from more than 40% in 1996 to less than 25% in 2007 and the first nine months of 2008. The ratio climbed to more than 40% in 2009 and was 36% in 2010.

El Recipients: North Central										
							1-Year	5-Year		
	2005	2006	2007	2008	2009	2010	Change	Change		
Total Income Beneficiaries	620	590	570	530	950	930	-2%	50%		
# of EI Beneficiaries with Regular Benefits	350	310	280	250	640	620	-3%	77%		
% of Alberta Beneficiaries with Reg. Benefits	1.6%	1.7%	1.7%	1.5%	1.2%	1.3%	0.1%	-0.3%		
Source: Statistics Canada, Human Resources and Skills Development Canada										

<sup>&</sup>lt;sup>10</sup> The number of beneficiaries receiving regular benefits excludes claimants receiving training, job creation and self-employment benefits as well as other employment and support measures benefits.

Economic Action Plan provides beneficiaries with five extra weeks of regular EI benefits in 2009 and 2010.

<sup>&</sup>lt;sup>12</sup> The number of beneficiaries receiving total income benefits includes both the beneficiaries receiving regular benefits and those receiving special benefits, such as for training, job creation, sickness, parental.

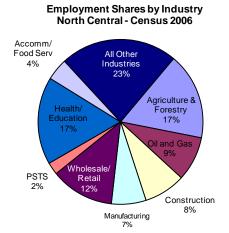

### **Employment by Industry**

In 2006, according to Statistics Canada's census data, the services-producing sector in the North Central Region accounted for about 59% of the total number employed. By comparison, the service sector accounted for 73% of Alberta's employment.

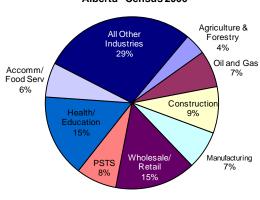

The Agriculture and Forestry industry employed the largest number of individuals. This industry accounted for 17% of the region's employment, compared with the industry's 4% share at the provincial level. The region has a sizeable logging sub-sector, as well as a large animal and crop farming sub-sector. The North Central Region accounted for 1.1% of total Alberta employment, but for 6.4% of Alberta employment in Agriculture and Forestry. The region's second largest industry is the Retail Trade sector.

Between 2001 and 2006, the Mining and Oil and Gas industry had the largest employment gain (up 730), mainly because of increased drilling activity. In the region's second largest industry, Retail Trade, employment decreased by about 100.

Although estimates from the Labour Force Survey are not very reliable <sup>13</sup> for the small regions, it is clear from the survey's results that the Mining and Oil and Gas, Construction, Retail Trade, Health Care and Social Assistance, and Education sectors have increased their employment levels between 2006 and 2009.

PSTS = professional, scientific and technical services

9

.

<sup>&</sup>lt;sup>13</sup> Due to sample size problems and there not being any population control totals for non-standard geographies.

Employment by Industry - North Central Region								
	2006	2001						
All Industries (Thousands) - Total	20.9	20.0						
Goods-Producing Sector	8.6	8.7

Other Services	1.2	0.9						
Public Administration	0.8	0.7						

Source: Statistics Canada, Census 2001 and 2006

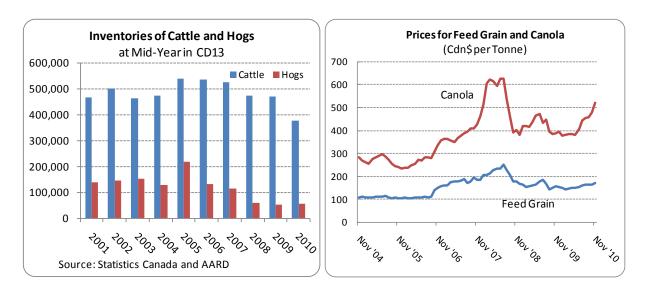

Statistics Canada cautions the reader that the regional Labour Force Survey estimates may be subject to large year-to-year fluctuations, especially for the smaller regions. Because of these data problems, census data for 2001 and 2006 were used for all indicators for the smaller regions such as the North Central Region and data for these indicators for the other years are not included in the tables.

#### Agriculture

The North Central region had total farm cash receipts of \$413 million in Census year 2006, accounting for 4.2% of Alberta's farm receipts. In that year, there were just over 3,100 farms in the region with a total acreage of 2.2 million acres. Average farm size was 720 acres, less than the Alberta average of 1,055 acres per farm.

The region accounted for 5.3% of Alberta's total value of on-farm livestock and poultry with a total market value of \$266 million in 2006. The total number of cattle and calves was 345,000, most of them beef cattle. The North East's share of Alberta's total number of cattle and calves was 5.4%, of hogs 5.9%, and of hens and chickens 6.0%.

Cropland acreage totaled 1.1 million acres or 4.7% of Alberta's cropland. The region's major crops include barley, oats, spring wheat, alfalfa, hay and canola.

Very few current agricultural indicators are available for these special geographies. However, livestock estimates are available for Census Division 13 (CD13), which consists mostly of the North Central region<sup>14</sup>. Between mid-year 2006 and mid-year 2010, the number of cattle and calves in CD 13 declined by 29%, while the number of hogs declined sharply by 53%.

In crop year 2008-09 (year ending August 31, 2009), grain and oilseed deliveries at the Westlock elevator in the North Central region totaled about 180,000 tonnes<sup>15</sup>, up 24% from 2007-08. Wheat (excluding durum) accounted for 80% of the total tonnage, followed by canola (10%) and barley (9%).

The global economic crisis had a profound impact on crop prices. Prices for canola and feed grain had more than doubled between early 2006 and the summer of 2008, but fell sharply by about 40% through early 2009. However, crop prices have rebounded strongly since Spring 2010. The Canadian Wheat Board is currently projecting that prices for durum wheat will rise by 46% in crop year 2010-11, compared with the average for crop year 2009-10, while prices for spring wheat and malting barley are projected to increase by 36%.

15 Deliveries at grain elevators are not representative of production as not all grain is shipped to local elevators

<sup>&</sup>lt;sup>14</sup> A map of Agricultural Census Divisions can be found in: <a href="http://www.statcan.gc.ca/ca-ra2006/m/car-rar-eng.pdf">http://www.statcan.gc.ca/ca-ra2006/m/car-rar-eng.pdf</a>

### Energy

Oil and gas production in the North Central region has diverged over the last five years, with gas production declining by 21.5% between 2004 and 2009, and oil production rising by 13.7% over the same period. Between 2008 and 2009, gas production declined by 9.3% while oil production fell by 10.3%.

North Central's share of overall Alberta gas production was 0.9% in 2009, making it the 14<sup>th</sup> largest producer out of 14 regions. Average annual gas prices dropped by 53.3% in 2009 to \$3.65 per gigajoule. So far in 2010, gas prices have averaged \$3.73, a slight increase from 2009, and low by historical standards.

The North Central region is the 12<sup>th</sup> largest conventional oil producing region in Alberta and the 13<sup>th</sup> largest overall oil producer (combining conventional and oil-sands). The region's share of Alberta's conventional oil production was 0.3% in 2009, but its share of total crude oil output was only 0.1%. Oil prices dropped by 38.0% to US\$61.80 per barrel in 2009. However, so far in 2010 oil prices have averaged \$78.96, an increase of 27.8%.

Over the last five years, the number of spudded wells in the region has dropped 82.9%.

Between 2008 and 2009, the spud count dropped by 80.5% to 31 wells, accounting for 0.4% of the Alberta total. Part of the decline can be attributed to a weak global economy and soft energy prices. However, in the first 10 months of 2010, the number of wells drilled in Alberta rose 44% from the same period of 2009, largely because of a more than doubling in the number of conventional oil wells. The Petroleum Services Association of Canada is forecasting an increase of 5% in 2011 over 2010 for Alberta drilling. These drilling estimates and forecasts should provide some optimism for oil producers in North Central.

Economic Indicators: North Central Region									
Oil and Gas Statistics									
	2009	2008	2004	% Change 1 Year	% Change 5 Years				
Crude oil production (millions of cubic metres)	0.1	0.1	0.1	-10.34%	13.68%				
Natural gas production (billions of cubic metres)	1.3	1.4	1.6	-9.25%	-21.54%				
Number of wells spudded	31	159	181	-80.50%	-82.87%				
Source: Alberta Energy									

The region's total gas potential represents 1.5% of Alberta's overall reserves, and oil potential is 1.1% of Alberta's conventional reserves.

\_

 $<sup>^{16}</sup>$  A spud is the very beginning of a drilling operation for a well

#### Forestry

The North Central region is the province's third largest producer of forest products, such as lumber and wood pulp. It is also the province's largest producer of pulp. As a result, one of the region's largest manufacturing sectors is pulp and paper. In 2009, the region accounted for 17.5% of all the wood fiber processed in the province.

Of the 3.7 million cubic metres of logs consumed by these two manufacturing sectors in the North Central region in 2009, 11% was used to produce lumber and 89% to produce pulp. Lumber production fell by 28% between 2005 and 2009 and pulp production rose 19%.

In 2009, forestry accounted for about 2,200 jobs (direct plus indirect and induced jobs) in the region, down from 2,700 jobs in 2005. Just under 800 of these jobs are direct jobs (processing jobs), an 18% decline from 2005. In Census year 2006, total employment in the region was 20,885. As the forestry sector accounted for an estimated 2,600 jobs (direct plus indirect and induced) in the same year, about 12% of the region's jobs are directly or indirectly related to the forestry industry.

Over the past four years, the value of shipments by Alberta's wood products sector fell by one-half, mainly because of the precipitous decline of the U.S. housing market. Between the first quarter of 2006 and the first quarter of 2009, U.S. housing starts fell from more than two million starts (on an annual basis) to fewer than 600,000 starts. During the past 18 months starts have remained in the 500,000 to 600,000 range. Canadian housing starts fell by one-half between mid-2008 and mid-2009, but have recovered most of their losses since then. Alberta housing starts also peaked in 2006, and fell by more than one-half between 2006 and 2009. Since then they have recovered strongly, but are not expected to return to 2006 levels over the near future.

The value of shipments by the North Central region's wood products and pulp and paper sectors totaled about \$720 million in 2009, a 12% increase from 2005.

The global economic and U.S. housing crises have had a profound impact on forest product prices. Prices for lumber had dropped by more than one-half between early 2006 and the early of 2009. However, these prices have increased sharply by about one-third since then. Pulp prices dropped by less than 30% between mid-2008 and the second quarter of 2009 and reached new highs by mid-2010.

### Wage and Salary Survey

Alberta Employment and Immigration commissions a detailed wage and salary survey every two years. The survey provides information on wages and salaries for full-time and part-time employees in Alberta by occupation, geographic area and industry<sup>17</sup>. The latest survey was conducted in 2009 and for the first time wage and salary estimates have been prepared for Alberta's 14 economic regions.

According to this survey, the average hourly wage was \$26.02 in the Mackenzie region in 2009, 6.9% more than the Alberta average of \$24.34 per hour. However, this higher average wage level is neither supported by Census 2006 estimates nor by taxfiler data for 2007, both of which suggest a substantially higher Alberta average. (The wage and salary survey's number of respondents for this region is likely much too small to provide accurate overall wage estimates.)

The average number of hours worked was 40.4 per week for the region and 37.3 for all of Alberta. As the below table clearly indicates, labour shortage issues are not confined to Alberta's urban core. The Mackenzie region had a 4.9% vacancy rate in 2009, much higher than Alberta's 3.0%. Moreover, the region also reported more hiring difficulties than Alberta (54% versus 41%). The industry in the region with the largest number of reported employees was healthcare and social services, followed by public administration and retail trade. Most of the industries for this region have too few reported employees for the estimates to be reliable. Only the three industries in the below table had more than 100 reported employees administration (federal, provincial and municipal government) with an average wage at \$33.90 per hour; retail trade (\$28.37); and healthcare and social services (\$26.58). Although estimates for the oil and gas industry are not as reliable as for these three industries, wage and salary estimates suggest that it is the industry with the highest average wage.

#### Investment

In 2010, the total building permit value for the North Central region stood at a five-year low of \$90.3 million, making up 0.8% of the provincial total. In 2010, the total building permit value for the North Central region decreased by 48% from 2009, but was 93% higher than the 2005 level. The decrease between 2009 and 2010 can be attributed to a large decrease in industrial permits of 93% to \$4.7 million and an 86% drop in institutional permits to \$4.8 million. Over the same period, residential permits increased by 7% to \$60.5 million, while commercial permits decreased by 3%. Between 2005 and 2010, residential permits increased by 75%.

The total number of dwelling units for which building permits were taken out in the North Central region in 2010 was 296. This was a 5% increase from the previous year and a 27% increase from 2005 levels. Over that five-year period, the number of multiple family dwelling units rose by 75% to 70 units in 2010. Over the same period, the number of single dwellings increased by 17% to 226 units.

#### Establishments with Employees

In 2010, the North Central Region had 1,806 establishments with employees, making up 1.2% of all establishments with employees in Alberta. Of these establishments 1,763 or 97.8% were small companies with between 1 and 49 employees. This region has the second highest small business share (97.8%) of any Alberta region, as well as the second highest share of micro-businesses with fewer than five employees (62.5%). The share of large companies with 50 or more employees is 2.4%, well below the Alberta average of 4.4%.

## Number of Establishments by Employee Size in 2010: North Central Region and Alberta

#### North Central Alberta

Between 2005 and 2010, there was a decline of 2.4% (or 45 companies) in the total number of businesses in the North Central Region and a 2.1% decrease (or 38 companies) in the number of small businesses. By comparison, at the provincial level, the total number of businesses increased by 2.3% and small companies experienced an increase of 3.4% over the same period.

In the North Central Region, 63% of companies with employees were involved in Service Industries in 2010. The total number of companies in service industries declined by 3.5% over the past five years, while the goods industry had a 0.6% drop over the same period.

Utilities and Construction is the largest industry in the region, making up 15.1% of establishments with employees in the North Central Region. By comparison, 13.8% of establishments with employees are engaged in the Utilities and Construction industry at the provincial level. Construction companies account for about 97% of the Utilities and Construction industry in this region.

Over the past five years, the Utilities and Construction industry also experienced the highest growth in the number of businesses, up 14.3% between 2005 and 2010. During that period, the second largest industry, Agriculture and Forestry, registered a large 15.1% decline in the number of businesses. About 90% of the number of businesses in

that industry is in the agricultural sector. The Accommodation and Food Services and Education sectors also had sizeable declines over the same period.

Source: Canadian Business Patterns, Statistics Canada								

<sup>\*</sup> A new subsector, Private Households (hiring cooks, nannies, etc.) was created in 2006, thereby inflating the 2006 to 2010 estimates for the sector and the region as compared to previous years. Hence, to make the data comparable, the values shown for the "Other Services Excluding Private Household" industry has been adjusted and does not include the Private Households sector data.

### **Inventory of Major Projects**

As of March 31, 2011, there were 7 projects proposed, planned, under construction or recently completed in the North Central region.

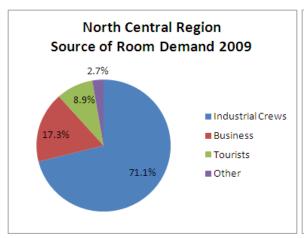

The total value for the projects in the North Central region was \$159 million, as of March 31, 2011. About 35% of the projects' value is attributable to Infrastructure and Institutional projects.

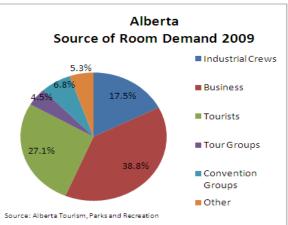

Economic Indicators: North Central Region									
Major Construction Projects, as of March 31									
	Number of	of	Value						
	Projects		(\$millions)

Source: Alberta Finance and Enterprise, Inventory of Major Alberta Projects									

Note: 2010 and 2011 cannot be compared because some projects are carried over several years and there is only one cost available for the entire project.

### Accommodation & Hospitality

In 2009 the North Central Region had 17 accommodation properties with a total of 720 rooms, accounting for 1.1% of available rooms in Alberta. The greatest demand for rooms came from industrial crews, who made up 54.3% of room demand. The second largest segment was business travelers at 24.9%. The average occupancy rate in the region was 49.5%, compared to the provincial average of 58.6%. The average room rate was \$86.99, which was 22.5% lower than the provincial average of \$112.19.
