

Backcountry Trail Flood Rehabilitation Program

South Ghost PRA to Lesueur Creek

Competition Date: November 2015

Website Information

Further information on the program, as well as an interactive web map can be found by visiting:

- [Backcountry Trail Flood Map](#)

It is also encouraged to visit the web map before heading into the backcountry within the program area. Trails which are under construction or under a temporary closure are updated weekly so you can Know Before You Go.

South Ghost Provincial Recreation Area (PRA) to Lesueur Creek

The trail heading west from the South Ghost PRA is a popular year-round OHV trail. This trail was heavily flood damaged, eroded and braided due to users attempting to access the trail through wet and damaged areas. Truck users attempting to drive on an OHV trail had also caused major damage. In November 2015, the BTFR Program trail crews installed OHV matting over a wet section of trail. A BTFR Program contractor added trail drainage features and closed braided trail access; replaced old hardening materials (tires) in a 100 m wet area with geotextile, gravel and culverts to allow proper drainage; re-routed 2 km of trail to bypass unsustainable trails and re-open access to the north staging area at trail marker 49. A volunteer group also assisted with bioengineering and planted willow stakes to stabilize the trail.
