**PRUSSIAN CARP**
*CARASSIUS GIBELIO*

If you catch a Prussian carp, keep it and kill it. Do not let it back in the water. Never release fish from your aquarium or pond.

**3X**
Females can spawn up to three times in one year, making them prolific invaders.

**24 HOURS**
The amount of time prussian carp can survive out of the water.

Alberta is the only jurisdiction in North America to have an invasive Prussian carp and can be found around the main stem and tributaries of the Bow, Rosebud, Red Deer and South Saskatchewan Rivers.

Females can spawn up to three times in one year, making them prolific invaders.

**Once established, they can be very difficult to get rid of.**

**Prussian carp impact native fish populations by out-competing them for food and habitat, as well as spreading disease and pathogens.**

It is not known what caused the invasion of “wild goldfish”, however it is suspected to have been intentionally released.

Intentional release of invasive species is illegal and could lead to jail time and/or substantial fines.

**DON’T LET IT LOOSE**
If you catch a Prussian carp, keep it and kill it. Do not let it back in the water. Never release fish from your aquarium or pond.
