### Introduction and Methodology

### Objective of the Survey

The purpose of the survey is to continue to build upon the historical series of benchmark retail food prices, which have been collected in Edmonton since the early 1970's and in several communities across Alberta since 1996. The data series provide accurate, timely and reliable information on retail food prices for a specific basket of items, for use in business analysis and planning. The information is also used by clients in health promotion programs, and nutrition education and counseling services, etc.

### Choosing the Basket of Food Items

To obtain a benchmark pricing standard, specific national brands and sizes were chosen for the list of items priced. This is essential to ensure that differences in food costs are real, and not due to inconsistencies in quality found between different brands. The data collection form is very detailed with respect to the specifications for each item in the basket, in order to avoid inconsistencies due to brand and size selection and substitution rules.

In 2004, a review of the survey was undertaken to ensure that the latest information available from Health Canada's Food Guide to Healthy Eating and Statistics Canada's Family Food Expenditure Survey was reflected in the basket of items priced. The updated basket was more realistic in terms of balance between variety and nutritional value.

Following in 2008, Health Canada developed a revised National Nutritious Food Basket (NNFB) to replace the 1998 basket. The revised 2008 NNFB is based on the latest dietary guidance (Dietary Reference Intakes and Eating Well with Canada's Food Guide), as well as food consumption data (Canadian Community Health Survey, Cycle 2.2, Nutrition).

As a result, in January 2009, the Alberta Retail Food Prices survey methodology was updated based, in part, on the 2008 National Nutritious Food Basket, with a few modifications necessary to adapt the basket for differences in availability and product sizes in Alberta. As well, the prices of some additional items were retained to maintain our historical price series, and are included in the Alberta Retail Food Prices report.

### **Data Collection**

Since the survey began in early 1996, Alberta Agriculture and Forestry has been able to collect data in more than 95 communities across Alberta, by partnering with Alberta Health Services.

Alberta Employment and Immigration (Now Ministry of Labour) and the Department of Agricultural, Food and Nutritional Sciences, University of Alberta. The number of participating communities changes in each survey, as do the participating partners.

For the June 2019 survey, representatives of Alberta Health Services, all of whom are either registered dieticians or nutritionists, were responsible for collecting the prices at the retail grocery outlets in their pre-determined communities. The exception to this is Edmonton and St. Albert, which were collected by Alberta Agriculture and Forestry, Statistics and Data Development Section. Those who were unable to collect the data themselves utilized the services of trained volunteers and student interns to do the data collection.

### Publication of the survey

The publication of survey results is governed by the Statistics Act of Canada, which prohibits the disclosure of confidential information. Accordingly, the prices shown in this report represent weighted averages of several retail stores, gathered in the same week. Information from communities with less than three retail grocery stores are combined with other communities within the same health area or geographic location or suppressed completely. It is assumed that the number of retail grocery outlets in a community is a reliable indicator of consumer demand and, therefore, an adequate proxy for human population.

The retail food prices shown are averages for each of the participating Alberta communities for a specific week, and cannot be directly compared to individual store prices in any community.

For the June 2019 survey, data for the following communities were combined by health area or geographic location, pre-determined through consultation with Alberta Health Services:

- -Athabasca-Smokey Lake
- -Brooks-Bassano
- -Canmore-Banff
- -Carstairs-Crossfield-Didsbury
- -Cold Lake-Elk Point
- -Drumheller-Three Hills
- -Edson-Whitecourt
- -Fort McLeod-Pincher Creek
- -Hanna-Stettler
- -High Level-La Crete-Fort Vermilion -Jasper-Hinton
- -Morniville-Onoway
- -Slave Lake-Manning
- -Taber-Vauxhall
- -Valleyview-Beaverlodge

### -Vermilion-Manville

### Comparisons

Survey results from the previous survey (June 2019) and the surveys conducted in prior years (November 2018), (June 2018) and (November 2017) have been included where available, for use in comparing retail food prices within the same community over time.

Caution should be exercised when comparing retail food prices between different communities. Several different factors may affect the competitiveness of food prices between different communities. Grocery stores are often competitive with their "in-house" and generic brands and not necessarily with nationally available brands. Since it is necessary to have standardized pricing to achieve the benchmarks, national brands were chosen, where possible, in order to ensure uniformity in quality and availability.
