OHS information for physicians

Notifiable Occupational Diseases

This information is intended to remind physicians of their responsibilities for reporting notifiable diseases under Alberta's *Occupational Health and Safety (OHS) Act*.

When a physician determines a person is affected by or is suffering from a notifiable disease, the physician shall notify a Director of Medical Services in writing of the name, address and place of employment of that person and the name of the notifiable disease. The attached notification form may be used as a template.

Notifiable occupational diseases include:

- (a) asbestosis;
- (b) mesothelioma;
- (c) asbestos-induced lung cancer;
- (d) asbestos-induced laryngeal cancer;
- (e) asbestos-induced gastrointestinal cancer;
- (e.1) any other kind of asbestos-induced cancer;
- (f) coal worker's pneumoconiosis;
- (g) silicosis;
- (h) elevated blood lead level, that is, a worker's blood lead level greater than 0.5 micromoles per litre ($\mu\text{mol/L}$); and
- (i) noise-induced hearing loss.
 - Please note that noise-induced hearing loss should be medically diagnosed as being noise-induced. This is defined as the average hearing threshold level at 1000 Hz, 2000 Hz, and 3000 Hz exceeds 35 dB bilaterally, and where the audiogram appearance is consistent with the effects of noise on hearing.

Key Points

- Notify a Director of Medical Services in writing of any person affected with or suffering from a notifiable disease within seven days.
- This report is separate from WCB requirements for reporting workplace injuries.
