

Backcountry Trail Flood Rehabilitation Program

Table Mountain Trail

Competition Date: June 2015

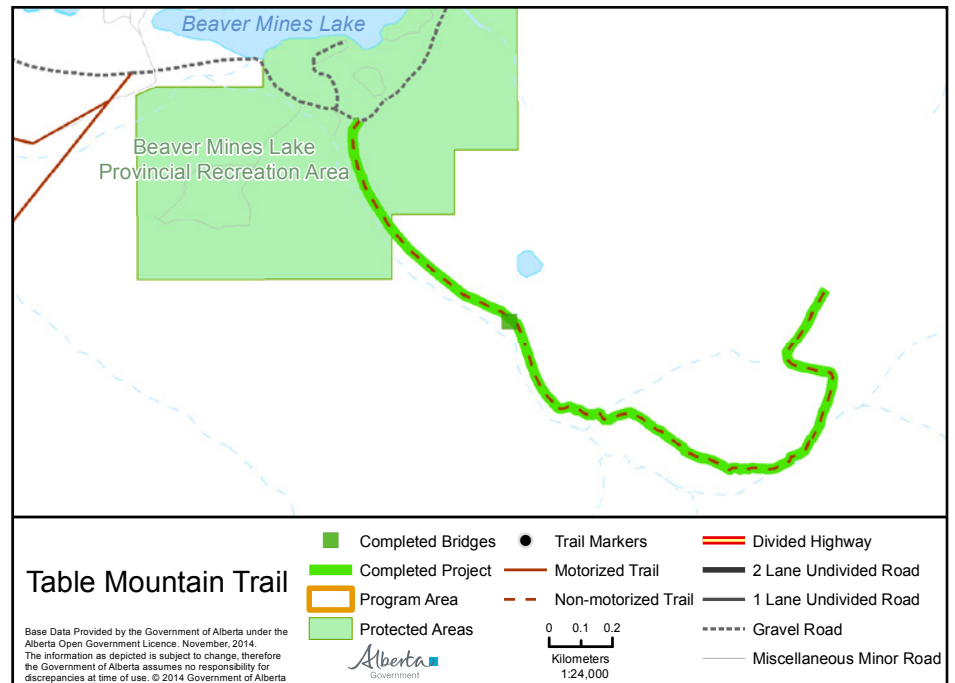

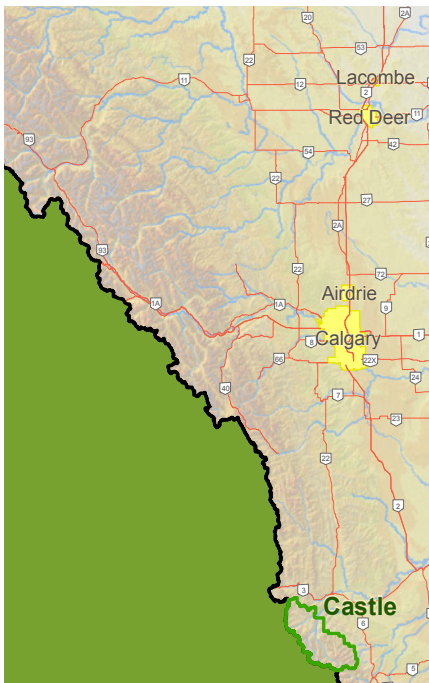

Table Mountain Trail

Table Mountain is a high use non-motorized trail valued by the community and visitors. It provides beautiful vistas of the Castle and opportunities to view wildlife. A number of locations along the trail had poor drainage resulting in trail users maneuvering off trail, water collecting or trail erosion occurring. An intermittent stream required a small pedestrian bridge and one section of the trail was starting to slump in.

In June 2015, a group of volunteers and a trail crew worked together to complete this project. The volunteer day was in partnership with Ed Gregor Stewardship Days (organized by the Crowsnest Forest Stewardship Society). Volunteers also completed a reroute around a heavily eroded area, installed drainage features, built a small pedestrian bridge and stabilized the slumped slope.

Approximately 2,500 m of trail was restored.
