To successfully contribute to integrated approaches to land management, land users and managers must aim to achieve the integrated land management (ILM) outcomes and adopt and apply the ILM principles.

**Outcomes**

- Human-caused disturbance on the land is reduced in relation to the disturbance that would have occurred without integration.
- A stewardship ethic is demonstrated by all land users.

**Principles**

Users and managers of provincial Crown land and related natural resources will:

- **be comprehensive and balanced** in their assessment of the values, benefits, risks, cumulative effects (environmental and socioeconomic) and trade-offs relevant to the operational scale being considered, while focusing on footprint reduction.
- **be collaborative and inclusive**, proactively seeking out timely engagement, sustained relationships and partnerships among participants.
- **be responsible and accountable** for their decisions and actions, which are underpinned and demonstrated by a stewardship ethic with regard to the maintenance of values associated with land and resources.
- **be consistent with the direction** provided through guiding policies, plans and decisions, and will reflect this direction in their activities.
- **be informed by knowledge and science**. Information contributes to better understanding of the potential consequences of options, and will provide the foundation for informed and prudent decisions.
- **use adaptive management** to continuously improve tools and processes, while identifying information gaps and other needs and seeking to fill them.
- **know the roles and responsibilities** related to the achievement of ILM outcomes. These roles and responsibilities are transparent, clearly communicated to all land users and managers, and performed in a timely manner.
- **respect** the diverse values, interests, rights, and knowledge of ILM participants.
