#### **Labour Market**

# Alberta posts largest job gain in nearly two years

Alberta created an impressive 18,600 jobs in May, building off April's strong gain. This represents the fourth month of job gains this year, bringing year-to-date job growth to 2.1%.

Service sector industries led the monthly gain, with Trade (11,800) and Professional, scientific and technical services (7,200) creating the most positions in May. Declines in good sector industries tempered the monthly gain as both the forestry, fishing, mining, oil & gas industry and the utilities industry posted job losses of 3,400 positions.

Despite May's job gains, the unemployment rate in the province moved up 0.4 percentage points to 4.8% as 31,400 more people entered the labour force in May. This represents the second largest monthly increase in the province's labour force on record.

Canada's employment surged in May, with 95,000 new positions added. The increase comes after a series of weak job gains in the first four months of the year. Ontario (50,600) posted its largest monthly gain in jobs on record, while Quebec (20,100) also contributed to the national increase. The national unemployment rate edged down 0.1 percentage points to 7.1% in May

## **Building Permits**

#### Permits post strong growth

Strong gains in the value of building permits signals continued growth in Alberta's construction industry. Permits rose 10% in April over the same month last year, with residential (+15.5%) and non-residential (+5.0%) permits both contributing to the increase. In the non-residential

sector, gains in institutional and commercial permits more than offset a drop in industrial permits.

Nationally, the value of building permits increased (5.4%) compared with April 2012, as residential permits increased for the first time in six months. Despite the positive reading, the value of residential permits is down 4.1% year-to-date.

## **International Merchandise Exports**

# Exports remain above last year's level

The value of Alberta's international exports grew for the fourth consecutive month in April, posting a 1.4% increase compared with the same month last year. Energy products, which account for around 70% of total exports, grew by 0.9%, while non-energy exports increased by 2.7%, led by strong growth in

industrial chemical, plastics & rubber exports (+19.3%). Mitigating the year-over-year gains, industrial machinery exports (-21.2%) dropped for the sixth straight month.

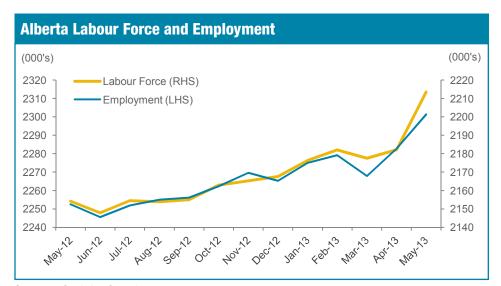

Nationally, exports grew by 2.4% in April compared with the same month last year.

#### **US Labour Market**

### Employment growth continues

US non farm payrolls increased by 175,000 in May, slightly above market expectations. This is an acceleration from the previous two months, however the increase was below the six month average of 206,000.

The US unemployment rate crept up by 0.1 percentage points to 7.6% as labour force participation gains outpaced job growth.
