

Consumer Price Index (CPI)

Inflation remains subdued

Consumer prices in Alberta rose by 1.2% in March, with higher shelter (2.1%) and food prices (2.2%) contributing to the increase. CPI excluding food and energy was also 1.2%, suggesting that underlying inflation remains subdued.

Canada's inflation rate decreased to 1.0% in March mainly due to falling gasoline prices. Core CPI inflation was unchanged at 1.4%, remaining below the Bank of Canada's target of 2.0%.

Manufacturing Shipments

Manufacturing activity strengthens

Building on last month's increase, Alberta manufacturing shipments jumped to the highest level in fifteen months. Sales reached \$6.4 billion in February, advancing 1.4% year-over-year. Growth in sales was supported by strong increases in wood products (48.3%) and chemical (7.1%) shipments.

Resale Housing Market

Sales and prices continue upward trend

Activity in Alberta's existing home market was strong in March. The average resale home price was \$382,350, up 6.4% from March 2012. Sales of existing homes also rose year-over-year (1.2%), hitting 5,184. As a result, the sales-to-new listings ratio remained at 0.61, signalling sellers' market conditions.

Nationally, the resale market continued to cool in March. On a year-over-year basis, sales dropped 9.9% and the average resale home price was virtually unchanged at \$373,117. This was the eighth straight month of decreasing sales at the national level.

Job Vacancies

Alberta's job vacancy rate remain high

Alberta's job vacancy rate averaged 2.4% between November 2012 and January 2013. This was down from the previous reading of 2.6%, but remained the second highest among provinces and significantly above the national rate of 1.4%. Over the same time period, there were 2.0 unemployed people for every job opening in Alberta, much lower than the national average of 6.5.

Global Economy

IMF cuts 2013 global growth forecast amid lower short-term risks

In its latest World Economic Outlook, the IMF downgraded world growth estimates once again. World growth is now forecast at 3.3% this year and 4% in 2014. Growth will continue to be led by emerging markets, while advanced economies struggle to find traction. On the positive side, recent policy actions have reduced the short term risks of a Eurozone breakup or a sharp fiscal contraction in the US.

Canadian growth to slow, Bank of Canada overnight interest rate remains at 1%

The IMF and the Bank of Canada (BoC) both lowered growth forecasts of the Canadian economy to 1.5% this year. According to the BoC, the slowdown in growth started last year due to a substantial contraction in oil related exports. The BoC expects growth to accelerate through the second half of 2013 to hit 2.8% in 2014, up slightly from their January forecast. With slowing growth and tepid inflation, the BoC maintained its overnight lending rate at 1%.
