

## Labour Market

### *Alberta leads provinces in April job growth*

Alberta gained 14,800 jobs in April, the largest monthly gain in almost two years and more than reversing March's 11,300 decline. The increase in employment was led by professional, scientific & technical services (+6,800), construction (+6,400), and accommodation & food services (+5,100). Since April 2012, the province has created 40,100 jobs, a 1.9% gain. As shown in the figure below, this increase was entirely due to gains in full-time positions (+83,000). The unemployment rate fell for the first time in six months, down 0.4 percentage points to 4.4% and remained well below the national rate of 7.2%. Alberta continues to have the second lowest rate in the country, after Saskatchewan.

At the national level, job creation resumed in April, but the increase fell slightly short of market expectations. There was little change in national employment (+12,500), reflecting very modest gains in Ontario and Quebec and losses in four of ten provinces.

## Housing Starts

### *Alberta new home construction remains strong, bucking national trend*

Alberta housing starts jumped to 39,200 in April (seasonally adjusted at annual rate, SAAR), the highest level in five months and well above the five-year average of 26,600. April's starts were 12.6% above the previous month, but 1.1% below the same month last year. Housing starts have been strong so far in 2013, averaging 35,100, largely due to high growth in single-detached starts.

Canadian new home construction continued to soften in April. Nationally,

starts came in at 174,900, down 3.5% from March and 30.9% below April 2012 levels. This represents the sixth consecutive month of year-over-year declines.

## New Housing Price Index

### *Alberta new home prices accelerate*

New home prices in Alberta have been picking up following years of flat or negative growth. For the first time in nearly five years, Alberta has seen prices grow at a faster year-over-year rate than the national average in the two most recent months. New home prices in Alberta rose 2.4% in March over the same month last year. The increase in prices is largely due to the housing component (+3.0%), as land prices posted a more modest gain (+1.2%). Prices in Calgary lead the province, increasing 4.3% over March

2012 compared with a 0.6% gain in Edmonton. At the national level, new home prices were up 2.0% in March compared to the same month last year.

## Building Permits

### *Residential and institutional sectors drive permit growth*

Total building permit values rose for the second consecutive month in March, advancing 22.3% over February and by 38.2% from March 2012. Institutional building permits drove non-residential permits up 69.0% year-over-year, more than offsetting declines in industrial and commercial permits. The residential sector saw permits jump 16.2% over March 2012, the twenty-first straight month of year-over-year gains.
