Consumer Price Index (CPI)

Inflation increases in February, remains lowest in country

Inflation in Alberta returned to positive territory, registering 0.9% in February. The increase in consumer prices was largely due to increases in gasoline (+3.8%), vehicles (+3.2%) and natural gas (+20.8%). Inflation was held down by a 31.6% decline in electricity prices. Excluding food and energy, inflation was 1.4% in February, suggesting that underlying inflation remains modest.

Canada's inflation rate was up in February to 1.2% due to rising prices for vehicles and gasoline. Core CPI inflation, which the Bank of Canada considers most relevant when making interest rate decisions, increased to 1.4%, below the Bank's target of 2%.

Average Weekly Earnings

Alberta average weekly earnings dip

Alberta average weekly earnings fell by \$5 to \$1,090 in January. Earnings remain 3.6% higher than the same month last year. Year-over-year gains in weekly earnings were mainly due to gains in the hourly wage rate, as average hours worked per week remained flat. Earnings declined the most in accommodation and food services (-4.7%), while the management of companies and enterprises industry posted the largest increase of all industries at 15.5%.

Nationally, average weekly earnings increased 0.1% to \$908, and were 2.7% higher than the same month last year.

Real GDP by Industry

Modest growth in January

Canada's real GDP grew by 0.2% in January, reversing the 0.2% decline from December. Manufacturing output, with strong growth in

durable goods production, led the gains at +1.2%, following a 1.9% decline in December. Mining, quarrying, and oil & gas extraction was up 0.3%, as gains in support activities and non-conventional oil extraction more than offset substantial declines in conventional oil and gas extraction. There were notable decreases in output from professional, scientific and technical services (-0.2%), finance and insurance (-0.1%) and administrative and support services (-0.4%).

Rigs Drilling

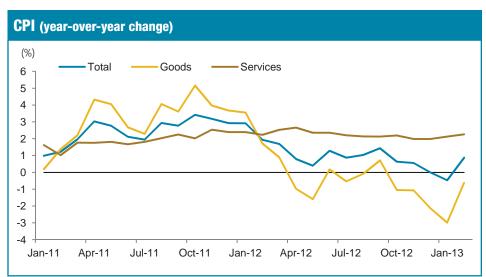

Drilling activity continues to trend lower

Rigs drilling continued to move lower, posting the tenth consecutive year-over-year decrease in March. The average number of rigs drilling in Alberta was 306, down 9.4% from the same month last year. Despite the drop, Drilling in March is still above the five-year monthly average.

Natural Gas Market

Natural gas prices move up

The NYMEX spot price for natural gas closed at \$US4.07/MMBtu on Wednesday, up almost 25% in a little over a month. This is the first time prices have been above US\$4.00 since September 2011. The price increase has been led by a higher than expected drawdown in US inventories over the past month due to localized cold spells in March. There are also signs that natural gas production in the US is slowing, as the US Energy Information Agency reported a drop in US dry gas daily production in December.
