

## Consumer Price Index (CPI)

### *Inflation in Alberta remains contained*

Consumer prices in Alberta rose by 1.3% in April over the same month last year, with natural gas (41.9%), electricity (7.1%), and food prices (2.9%) being the largest contributors. Inflation was held back by a 7.4% decline in gasoline prices. Excluding the more volatile food and energy components, prices rose just 0.9%, suggesting that underlying price pressures remain subdued.

Nationally, annual CPI inflation in April was a tepid 0.4%, the lowest rate since October 2009 and well below the Bank of Canada's target of 2.0%. The moderation in consumer prices was largely due to a 6.0% drop in gasoline prices. Core CPI inflation, which excludes the most volatile items and is considered a better measure of underlying inflation, decreased to 1.1% from 1.4% in March.

## Construction Price Indices

### *Construction cost inflation decelerates*

Growth in non-residential building construction costs continued to slow in the first quarter of 2013. On a year-over-year basis, costs moderated to 1.4%, marking the fifth straight quarter of lower annual increases. The increase in overall construction costs reflected moderate gains in industrial (2.1%), commercial (1.4%) and institutional (1.0%) costs.

The apartment building construction price index was up only 1.5% year-over-year in the first quarter, the smallest increase since the third quarter 2010.

## New Motor Vehicle Sales

### *Auto sales level off*

The number of new vehicles sold in Alberta was virtually flat in March compared with the same month last

year. The flat reading reflects a 8.9% drop in car sales, which more than offset the 2.8% increase in truck sales (includes SUVs and vans).

## Manufacturing Shipments

### *Manufacturing shipments cool*

Manufacturing shipments fell below last year's level for the seventh consecutive month in March (-2.0%). Year-over-year declines in machinery manufacturing (-14.0%) and fabricated metals (-12.5%) were partially offset by another strong gain in wood products (+40.1%) and an increase in petroleum & coal (3.7%), which is the largest manufacturing industry in Alberta.

Nationally, manufacturing shipments were down 1.0% from March 2012.

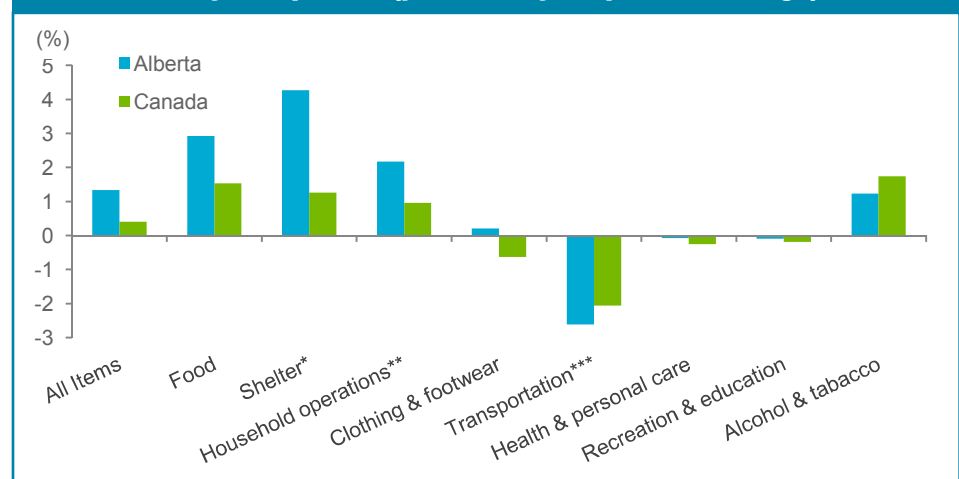

## Resale Housing Market

### *Home prices remain above last year's levels, but sales dip*

Resale home prices in Alberta fell 1.6% in April to \$374,334 compared with the previous month, but were up 3.4% from April 2012. Sales of existing homes edged down to 5,176 in April, 2.9% below the same month a year ago. An increase in listings combined with little change in sales pushed the sales-to-new listings ratio down to 0.60 from 0.61 in the previous month (a ratio above 0.60 indicates sellers' market conditions).

The national resale market continues to cool. Canadian sales dropped on a year-over-year basis for the ninth straight month, down 9.4% from April 2012. Average resale prices edged up 1.1% over the same period.

## CPI Inflation by component (year-over-year percent change)
