

Housing Starts

Alberta housing starts remain strong

Housing starts in Alberta totalled 38,700 (Annualized) in June, down from 43,100 in May. June starts were 14.6% above June 2012. Through the first half of 2013, housing starts averaged 37,300, up 11.5% over the same period last year. The year to date growth was largely due to more starts of single-detached dwellings.

Edmonton has been driving new home construction in Alberta. Housing starts in Edmonton for June are up 67.7% over a year ago, and year to date starts are up 44.4%. This has been more than enough to offset weakness in Calgary where starts are down 24.0% year over year, and 20.9% year to date.

Canadian housing starts fell to 199,600 in June and are down 10.1% from June 2012. Through the first half of 2013, starts are down 15.4% nationally, almost entirely due to declines in BC, Ontario and Quebec.

Note: These statistics are unaffected by the flooding in southern Alberta as data collection was completed before flooding began.

New Housing Price Index

Calgary new home price index posts largest increase in over five years

Alberta's new housing price index (NHPI) posted another solid increase, rising 2.7% year over year. The increase is largely due to the housing component (+3.5%) as land prices posted a more modest gain (+1.1%). New house prices in Calgary rose 5.3% year over year, the largest gain since March 2008. In contrast, Edmonton's price index rose only slightly, up 0.2%.

At the national level, NHPI was up 1.8% in May compared with the same month last year.

Building Permits

Permits dip slightly in May, though remain up year-to-date

After strong gains in February and March, the value of new building permits fell in each of the next two months, most recently down 7.4% in May. To see past the volatility in building permits it is useful to look at year to date change where the value of new building permits are up 17.8%. The year to date gains are broad based with residential permits up 14.4% and non-residential permits up 22.0%. Strength in non-residential permits is bolstered through notable gains in commercial projects, and incredible growth in institutional permit values, though the numbers are leveled slightly with small losses seen for industrial permits.

Business Outlook Survey (BOS)

Businesses take wait-and-see approach

For the first time in two quarters, representatives from Canadian businesses surveyed for the Bank of Canada's Business Outlook Survey responded that sales volumes were higher in the previous 12 months than in the 12 months before that. However, fewer businesses expect that growth to continue into the future. There are also fewer firms expecting to step up investment in machinery and equipment, however, more firms are expecting to increase their employment. The conflicting responses to the survey are indicative of uncertainty about the health of the current business climate in Canada.
