

Alberta Population Projection

Immigration to drive population growth

Alberta's population is expected to grow from just under four million this year to over six million by 2041, according to the latest medium-growth scenario released today by Alberta Treasury Board and Finance. Net migration is projected to account for 67.8% of total population growth, with 1.4 million people arriving from outside the province over this period. Roughly three-quarters of these net migrants are expected to come from outside of Canada. For more details, see Alberta Treasury Board and Finance's: [Alberta Population Projection](#).

Resale Housing Market

Alberta firmly in sellers' market territory

July sales of existing homes rose 0.7% from June, and were up 9.2% from the same month a year ago. The jump in sales coupled with a decline in listings pushed the sales-to-new listings ratio up to 0.66, the highest level in over three years (a ratio above 0.60 indicates sellers' market conditions). The Southern Alberta floods, which resulted in extensive damage to homes, likely impacted the resale numbers for the second straight month. The average price for a resale home in Alberta was \$377,059 in July, up 4.4% from July 2012. This increase was largely due to a 6.8% price gain in Calgary.

At the national level, sales increased 2.9% on a year-over-year basis, the second straight month of gains following eleven months of declines. The average price for a resale home jumped 8.2% year-over-year to \$384,453.

Manufacturing Shipments

Shipments post small gain over last year

In June, Alberta manufacturing shipments held steady at May's levels, but were up a modest 2.7% over the same month last year. Petroleum & coal shipments surged 23.5% year-over-year, largely due refineries coming back online after outages over the previous two months. Chemical manufacturing also continued to perform well, with shipments growing by 33.4% compared to June 2012. Overall gains were held back by fabricated metals and machinery, which continued to decline over last year's levels. Canadian manufacturing shipments decreased 3.7% year-over-year, with durable goods dropping 7.4% compared to last year.

Construction Costs

Construction cost inflation moderates

Non-residential construction costs in Alberta continued to rise in the second quarter of 2013, but at a slower pace. Growth in the cost index (average of Calgary and Edmonton) decelerated to 0.9% year-over-year growth, down from 1.4% in the first quarter. Industrial construction costs noted the largest increase (1.6%), while costs in commercial (1.0%) and institutional (0.5%) were more restrained. Non-residential construction cost growth has now slowed for five straight quarters.

The apartment building construction price index, also grew slightly over the second quarter (+1.0%) from the same time last year.
