

# weekly economic review

May 31, 2013

## Average Weekly Earnings

### Earnings continue to post strong gains

Alberta average weekly earnings increased in March to \$1,111, following a strong increase in February. Earnings were 4.6% higher than the same month last year, reflecting increases in average hours worked per week and the average hourly wage rate. Service industry earnings increased an impressive 4.9%, while goods producing industries posted a more modest growth rate of 2.6%. Average weekly earnings in the first quarter of 2013 are 4.0% higher than the same quarter last year.

Nationally, average weekly earnings increased 0.7% to \$915, and were 3.1% higher than March 2012.

## Rig Activity

### Rig count flat compared with last year

The number of rigs drilling in Alberta in May averaged 88, equaling the total from May 2012. This is the first time in twelve months that rig activity did not fall on a year-over-year basis, adding to a trend of smaller declines in rig activity. Despite the positive reading, the month of May is historically the weakest month for drilling as rig activity is heavily influenced by spring time weather conditions.

## Interest Rate Decision

### Bank of Canada remains on hold

In Governor Mark Carney's last policy announcement, the Bank of Canada left the overnight interest rate unchanged at 1.0%, where it has remained since September 2010. The bank maintained its tightening bias in the medium term but reiterated the continued need for monetary stimulus for a period of time, citing muted inflation pressures and excess capacity in the Canadian economy.

## Canadian Economy

### GDP growth propelled by net exports

Canada's real GDP grew at the fastest pace in six quarters, advancing at an annual rate of 2.5% in the first quarter of 2013. Net exports, led by energy and mineral products, combined with gains in inventories, drove the quarterly gain. Despite the positive headline growth, annualized growth in household consumption expenditures and business investment was weak at under 1.0%. Investment in residential structures fell, reflecting the slowdown in the national housing market. Government investment also declined.

### Total compensation of employees rises

Alberta's total compensation of employees, composed mostly of salary and wages, continued to post impressive gains, advancing 8.2%

in the first quarter compared with last year. Alberta's growth in total compensation remains well above the national rate of 4.2%.

## Corporate Operating Profits

### Oil and gas extraction profits rebound

Operating profits in the Canadian oil and gas extraction industry jumped by 28.3% in the first quarter of 2013. The increase followed six consecutive months of decline, which saw profits fall by 71.0% between the second quarter of 2011 and the fourth quarter of 2012. Operating profits in the wood and paper manufacturing industry also saw a large increase, up 126.4% from the fourth quarter of 2012. Overall, operating profits across all Canadian industries were down 1.2%, mostly due to a 4.7% decline in financial sector profits.
