

New Housing Price Index

Housing price index posts largest gain in almost five years

New home prices in Alberta grew at the fastest rate since 2008. Alberta new home prices were up 2.6% in February over the same month last year. Prices in Calgary continued their upward trend, increasing 4.3% over February 2012 compared to a 1.0% gain in Edmonton (see Chart). Despite recent gains, Alberta new home prices remain 8.4% below their December 2007 peak.

At the national level, new home prices were up 2.1% in February compared to the same month last year. The main contributor to this gain was the metropolitan region of Toronto-Oshawa.

Housing Starts

Alberta housing starts edge down

Alberta new home construction decreased slightly in March, following two months of gains. Housing starts were 34,900 (seasonally adjusted at annual rate, SAAR) in March, down 1.1% from the previous month and down 1.4% from the same month last year. Despite these declines, housing starts are still well above their five year average of 26,600.

Canadian housing starts were up 0.4% to 184,000 in March. This was 13.6% below the same month last year, the fourth consecutive month of year-over-year declines.

Building Permits

Commercial sector drives strong permit growth in Alberta

The total value of building permits in February, an indicator of future construction activity, jumped 17.7% over January's levels. On a year-over-year basis, permits were

up 20.9%, fueled by a 35.9% increase in non-residential permits. Commercial permits, a component of non-residential permits, posted substantial gains (61.7% y/y), driving the overall increase. Nationally, permits continue to trend lower, falling on a year-over-year basis for the third straight month (-8.5%).

Canadian Economy

Canadian business environment remains challenging

The Bank of Canada's quarterly business survey suggests that many Canadian businesses have been hurt by the recent slowdown in national economic activity. The percentage of firms reporting decreased sales growth over the past 12 months has increased to 48%, the highest share of the last three years, though the outlook for future sales growth has improved. In addition, the balance of opinion on future investment in machinery and equipment has declined from the previous quarter. Inflation expectations have also moderated, though they remain within the Bank of Canada's target range.

US Economy

Consumer sentiment and retail sales soften

US retail sales fell in March (0.4%) after a strong gain in February. The decline was fairly broad-based with sales from gasoline stations leading the drop. The University of Michigan consumer sentiment index also weakened in March, falling to its lowest level since the summer of 2012.
