

CPI Inflation

Inflation turns negative

Average consumer prices fell in Alberta for the first time since September 2009. January's inflation reading of -0.5% was mainly the result of declines in energy prices, which have fallen for 4 straight months. In particular, Electricity (-29.5%) fell from a record high set in January 2012, and gasoline (-7.3%) prices tumbled from a year ago. Inflation excluding volatile energy prices remained positive at 1.0%, signaling that underlying price pressures remain subdued.

Nationally, CPI inflation registered a modest 0.5% increase in January, after a 0.8% reading in December. The moderation in consumer price growth can be mainly attributed to declining gasoline (-1.8%) prices. The Bank of Canada's Core inflation measure, which excludes 8 volatile components including gasoline, came in at 1% in January, continuing the trend of weak underlying inflation.

Retail Sales

Alberta consumers ring through the tills in 2012

Supported by strong population growth and a robust labour market, growth in consumer spending accelerated in 2012. Alberta retail sales grew 7.6%, the highest growth rate in five years and the largest increase among the provinces last year. Growth was driven by higher sales of vehicles and clothing & accessories. Nationally, sales were up by a more modest 2.5% over 2011.

On a monthly basis, retail sales ended 2012 on a weaker note. In December, sales dipped for the second consecutive month, but were still up 1.9% over the same month in 2011.

The softer growth was mainly due to lower sales of electronics & appliances and food and beverages. Vehicle sales continued to trend above the previous year level, but the year-over-increase moderated to 3.9% in December.

Job Vacancies

Unfilled positions remain high in Alberta

The province's job vacancy rate averaged 2.8% between September and November of 2012, the second highest rate among the provinces, and significantly above the national average of 1.7%. The job vacancy rate is the number of job openings as a share of labour required (employed individuals plus job openings). Over

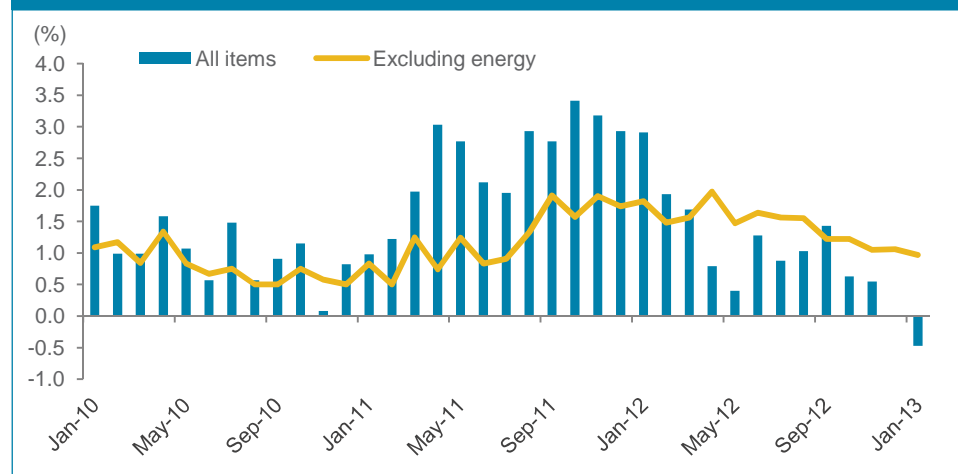

the same period, there were only 1.7 unemployed people for every job opening in Alberta, well below the national average of 5.2.

Residential Investment

Investment in new home construction strong in 2012

Alberta's residential investment reached a five year high in 2012, with growth in multiple units leading the way. Investment in new home construction was up a strong 23.9% in 2012, rebounding from a decline in 2011. The solid growth in residential investment was also reflected in housing starts, which were up an impressive 29.9% in 2012.
