

Average Weekly Earnings

Earnings dip in June, but remain well above last year's levels

Alberta average weekly earnings (AWE) fell 0.9% in June to \$1,110 per week, following two months of increases. Despite the monthly decline, earnings were 3.9% higher than the same month last year, mainly reflecting increases in the average hourly wage rate. Year-over-year growth in average hours worked moderated significantly in June, with work disruptions stemming from the southern Alberta floods likely playing a role. AWE in the first half of 2013 was 4.0% higher than the same period last year.

Nationally, AWE increased 0.2% to \$919 in June, and was 2.6% higher than the same month last year. All ten provinces saw year-over-year increases in June, with Alberta posting the second-largest gain after Saskatchewan.

Rigs Drilling

Drilling activity rebounds

The number of active drilling rigs in Alberta increased by 7% in August over the same month last year, the largest year-over-year increase in seventeen months. Rigs drilling has started to stabilize after a sharp drop in the second half of 2012 and declines in early 2013.

Bankruptcies

Insolvencies continue to fall

In June, the number of businesses filing for bankruptcy reached the lowest level since 2004, when the data started being reported. Business

bankruptcies plunged 59.1% from the same month last year to 9. Consumer bankruptcies also fell, dropping 22.5% over the same period.

Gross Domestic Product (GDP)

Consumers prop up Canadian growth

Canadian Real GDP expanded at an annual rate of 1.7% in the second quarter, down from 2.2% growth in the first quarter. The deceleration was mostly caused by weaker export growth. Household expenditures propped up GDP growth, expanding 3.8%, the largest increase since the fourth quarter of 2010. A 20.2% increase in vehicle purchases was mostly responsible for the jump in consumer spending.

In June, Canadian real GDP by industry fell by 0.5%, the largest decrease since March 2009.

Construction industry output was disrupted by labour disputes in Quebec, falling by 1.9%. There were also substantial declines in manufacturing, wholesale trade, and retail trade. Oil and gas extraction bucked the downward trend, moving up 2.1% on increases in non-conventional oil extraction.

US economy strengthens

Real GDP in the US grew at an annual rate of 2.5% in the second quarter, up from 1.1% in the previous quarter. Second quarter growth was revised up by 0.8 percentage points from the advance estimate. The upward revision was due to stronger net exports and non-residential fixed investment. It is also consistent with the improvement in employment growth observed in the first half of 2013.
