Re: Crowsnest Pass – June Ambient Passive Summary Report

Enclosed is the Crowsnest Pass Ambient Passive Monitoring Report for **June 2006**.

Intermittent and Passive Monitoring

Included in this summary are the results of the monthly passives of Hydrogen Sulphide (H₂S), Sulphur Dioxide (SO₂), Nitrogen Dioxide (NO₂), and Ozone (O₃). All samples were collected in triplicate, there were no issues noted from field logs for the month of June.

All samples were collected and analyzed with the following summary of results:

Summaries:

Average concentrations for H₂S passives ranged from 0.0 – 0.1 ppb, with a mean of 0.1 ppb

Average concentrations for SO₂ passives ranged from 0.1 – 1.8 ppb, with a mean of 0.6 ppb

Average concentrations for O₃ passives ranged from 30.1 – 39.0 ppb, with a mean of 35.4 ppb

Average concentrations for NO₂ passives ranged from 0.5 – 1.7 ppb, with a mean of 1.1 ppb

Additional statistical analysis has been performed to assess the triplicate results; the plots of these summaries are located at the end of this report.

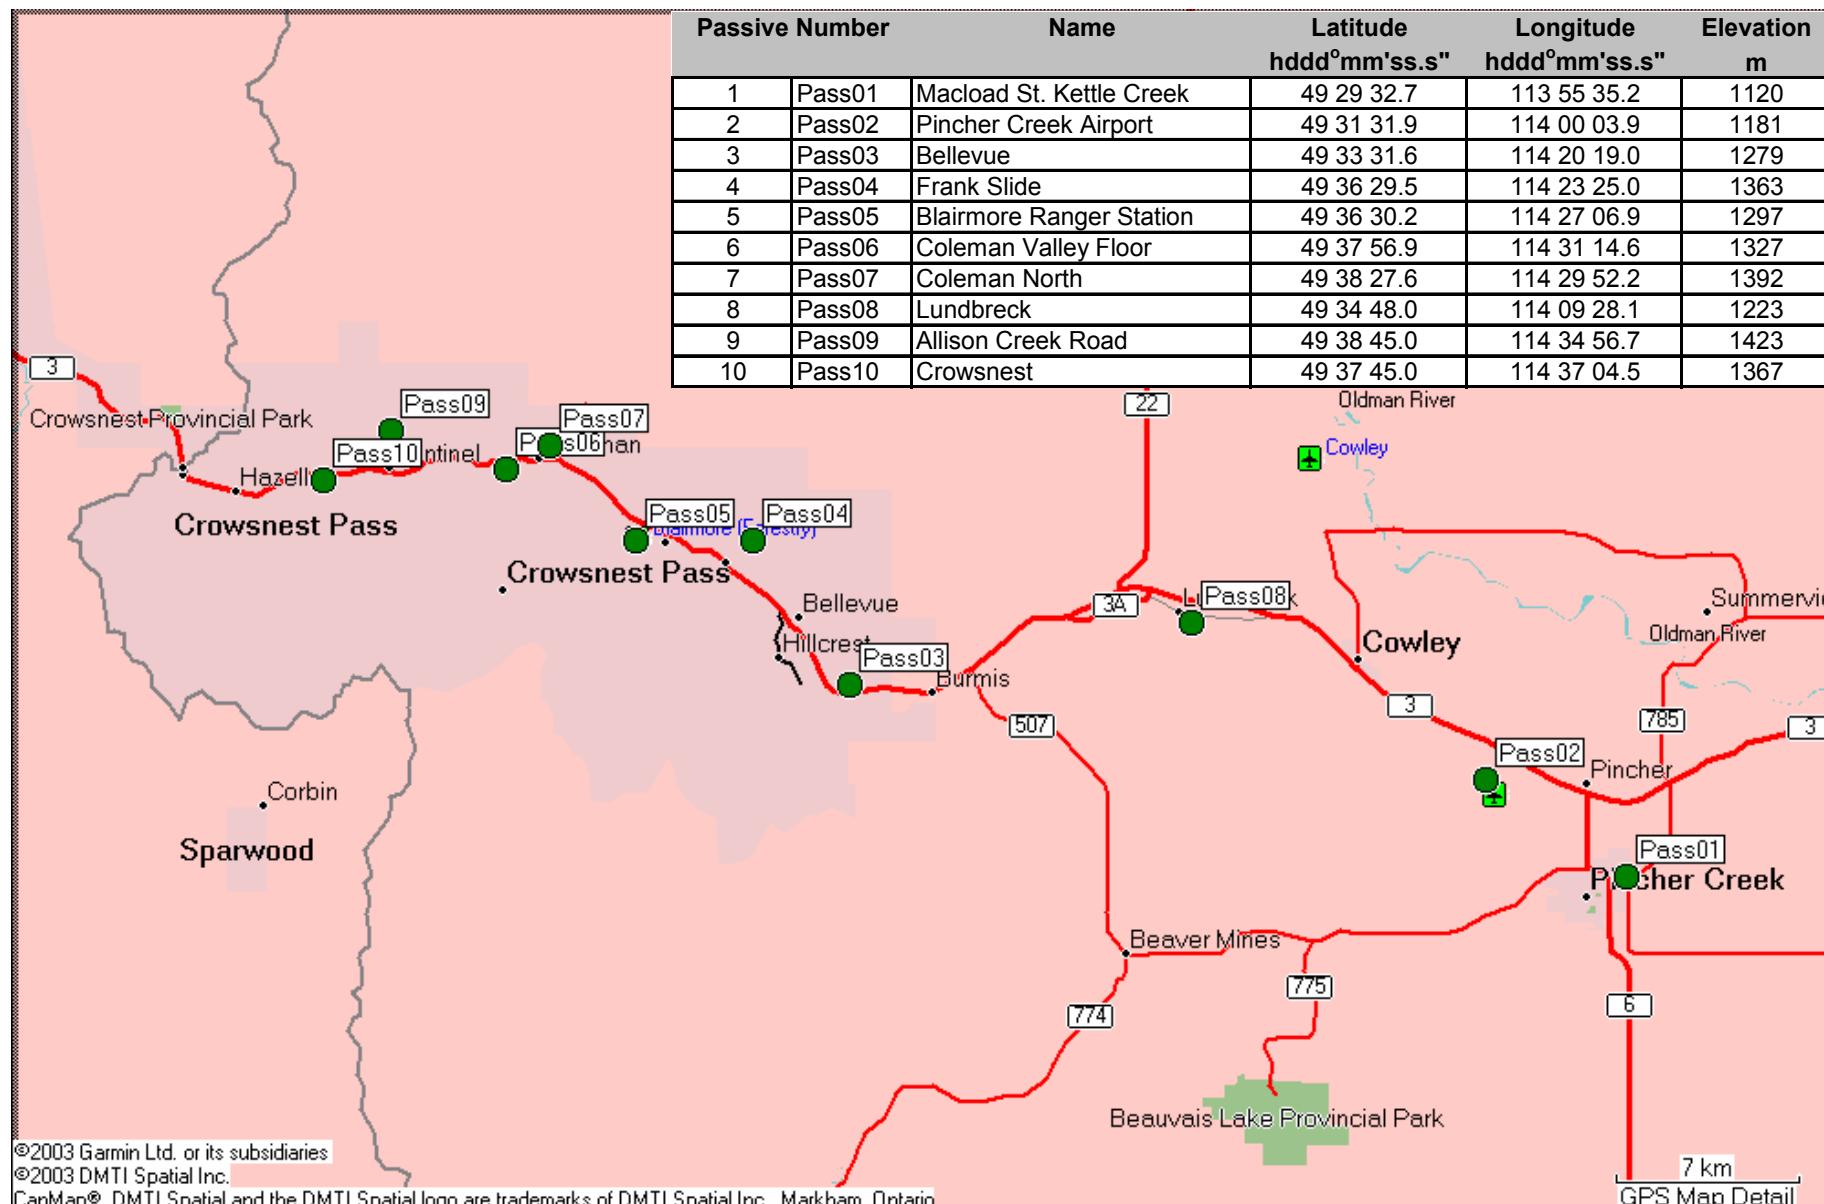

If you have any questions, please contact the AQM department of Focus at 1-888-869-2252 or 1-888-466-6555.

Sincerely,

Sharon Whiteley, B.Sc.

8	1.1	1.3	1.2	0.1	0.0
9	0.6	1.3	0.9	0.4	0.2
10	0.8	1.1	1.0	0.2	0.0

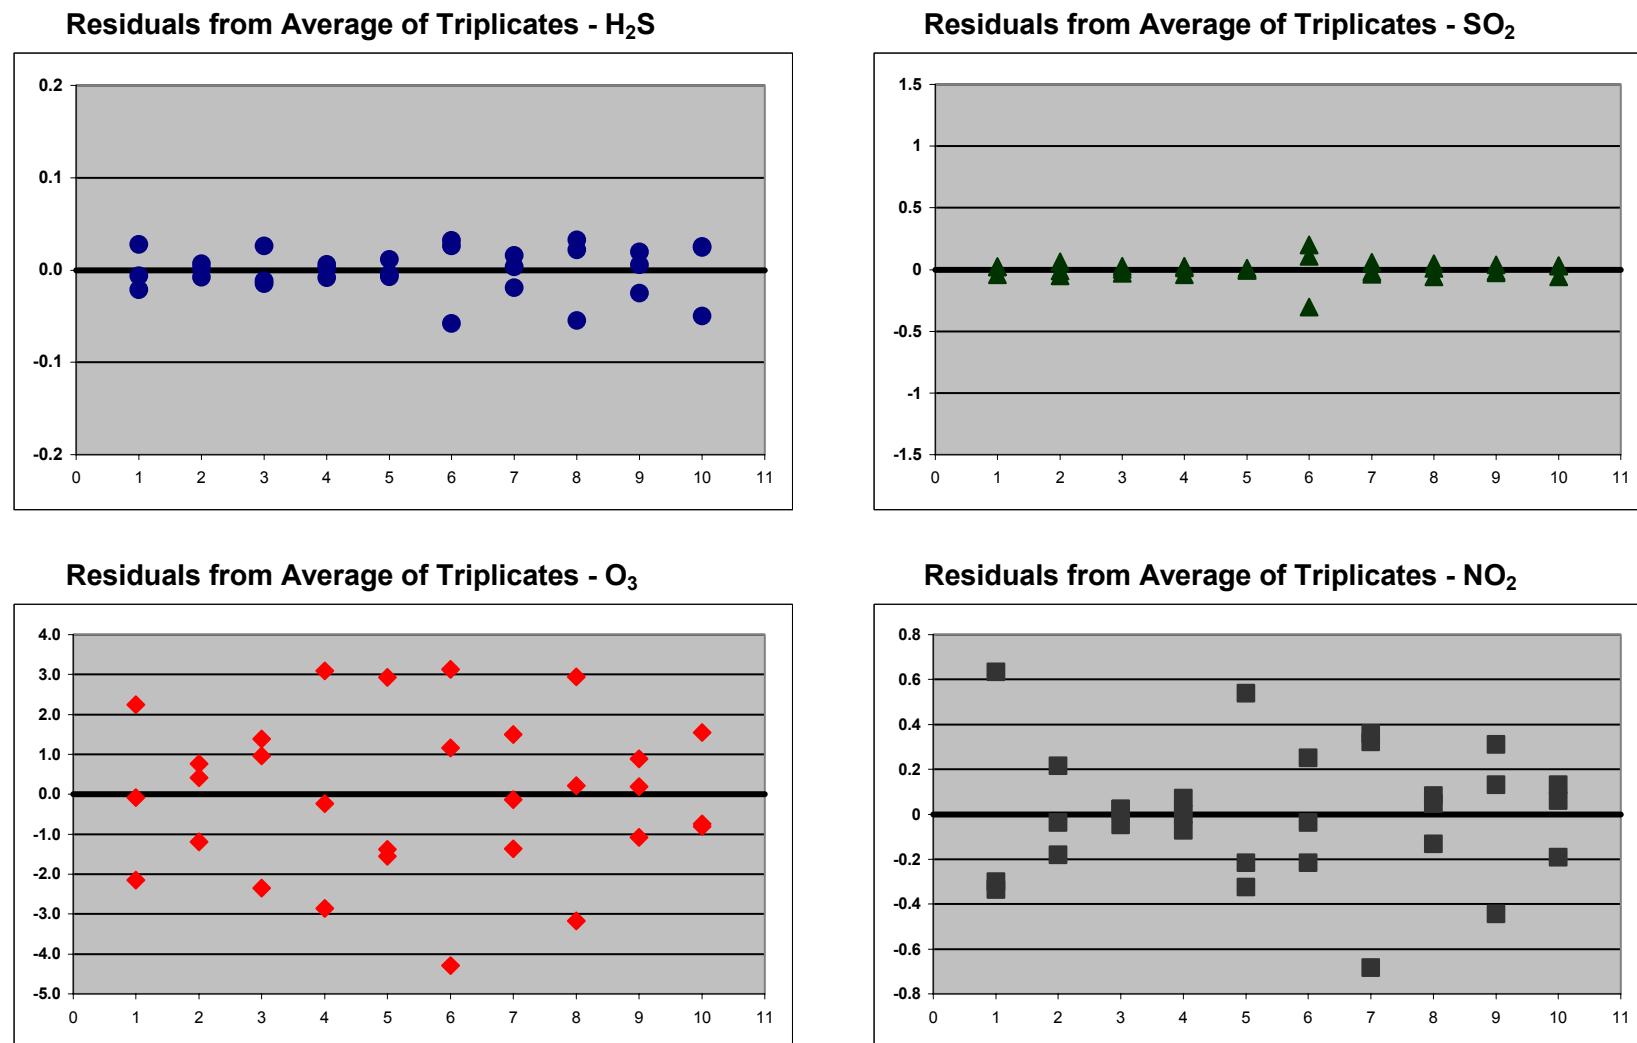

Figure 9. Residual Plot of the Individual readings compared to their means

Residuals are calculated by averaging the triplicate sample then subtracting each individual samples, as defined by:

$$\text{Residuals} = (\bar{x} - x)$$

The closer to the zero line the more precise the measurements are, and when samples are further from the zero line they are less precise based on the triplicates collected.

Sum of Squares of deviations of data points from their sample mean:

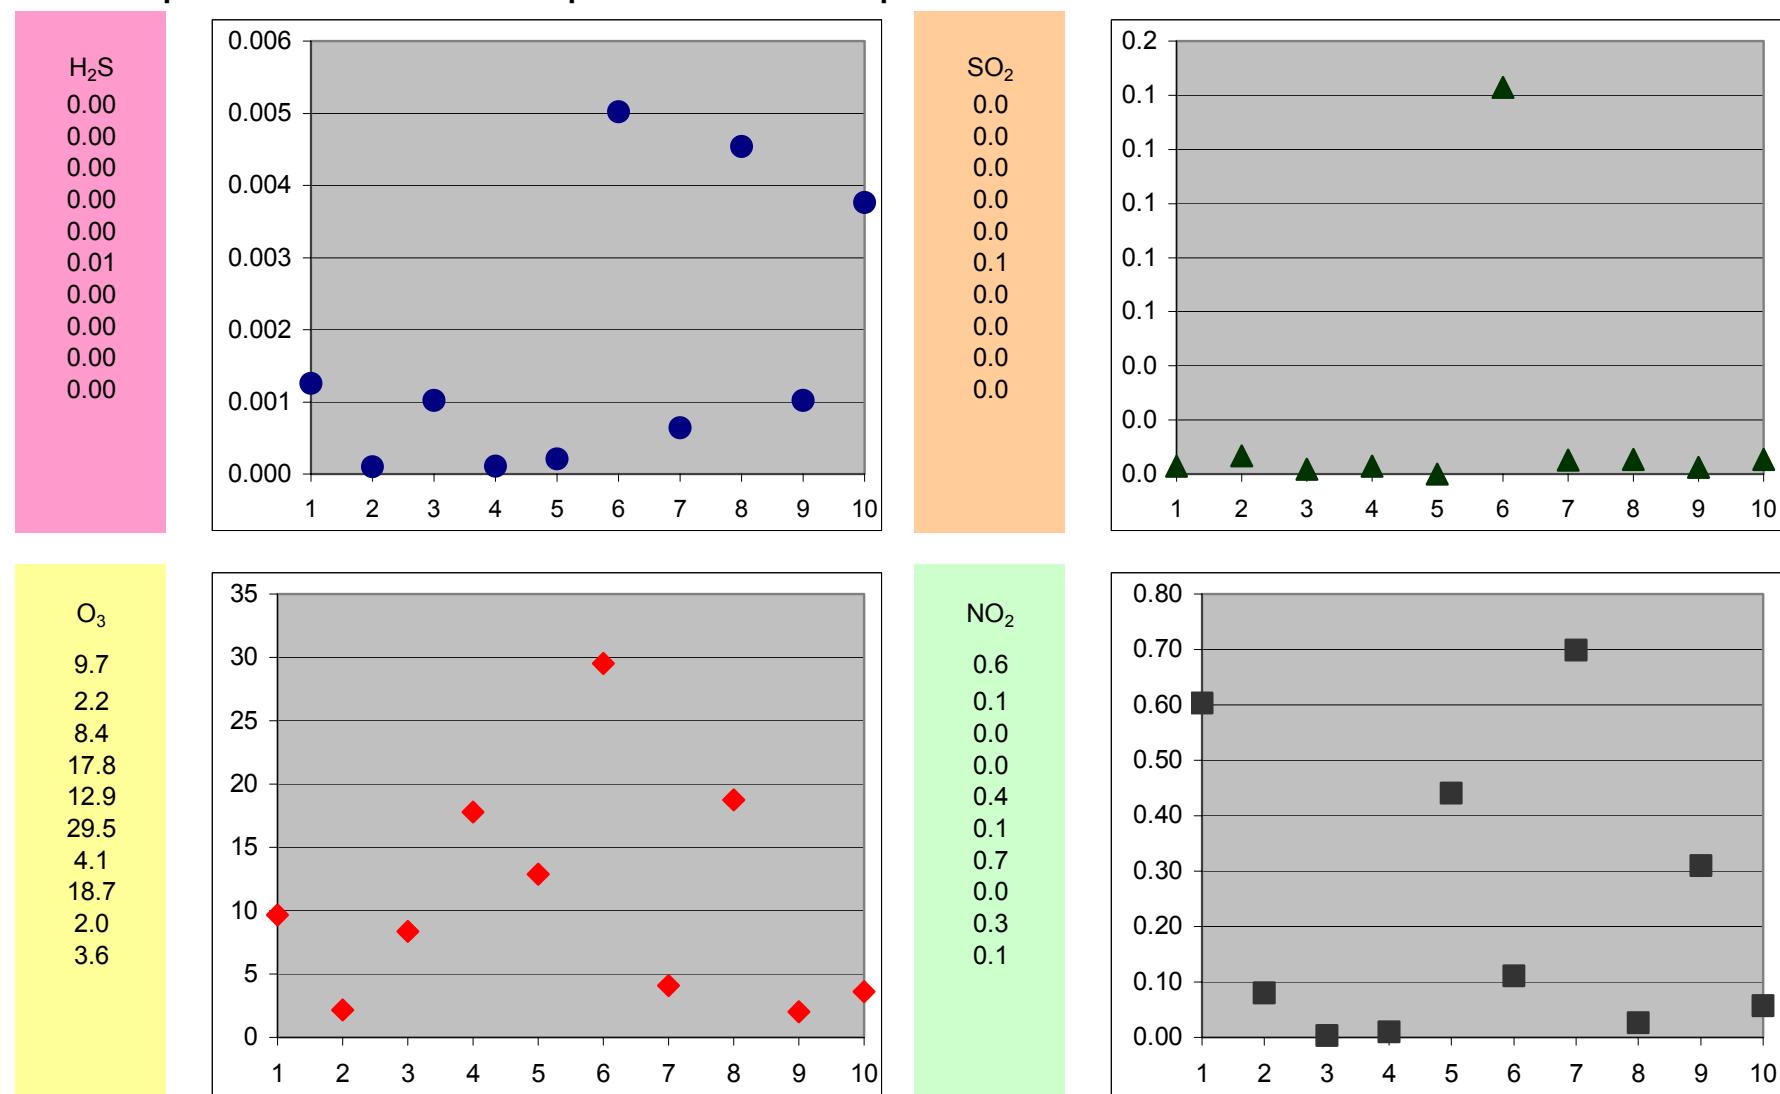

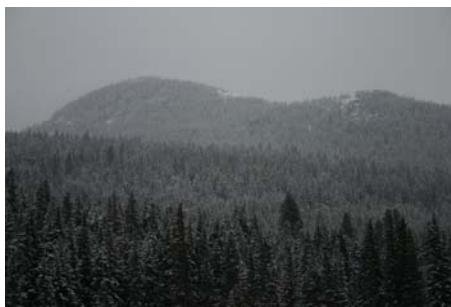

Figure 10. Sum of Squares of Deviations of the Triplicates from their means

The sum of squares of the deviations is the square of the differences between each individual point minus the mean of the triplicates; as defined by:

$$\text{Sum of Squares of Deviations} = \sum (x - \bar{x})^2$$

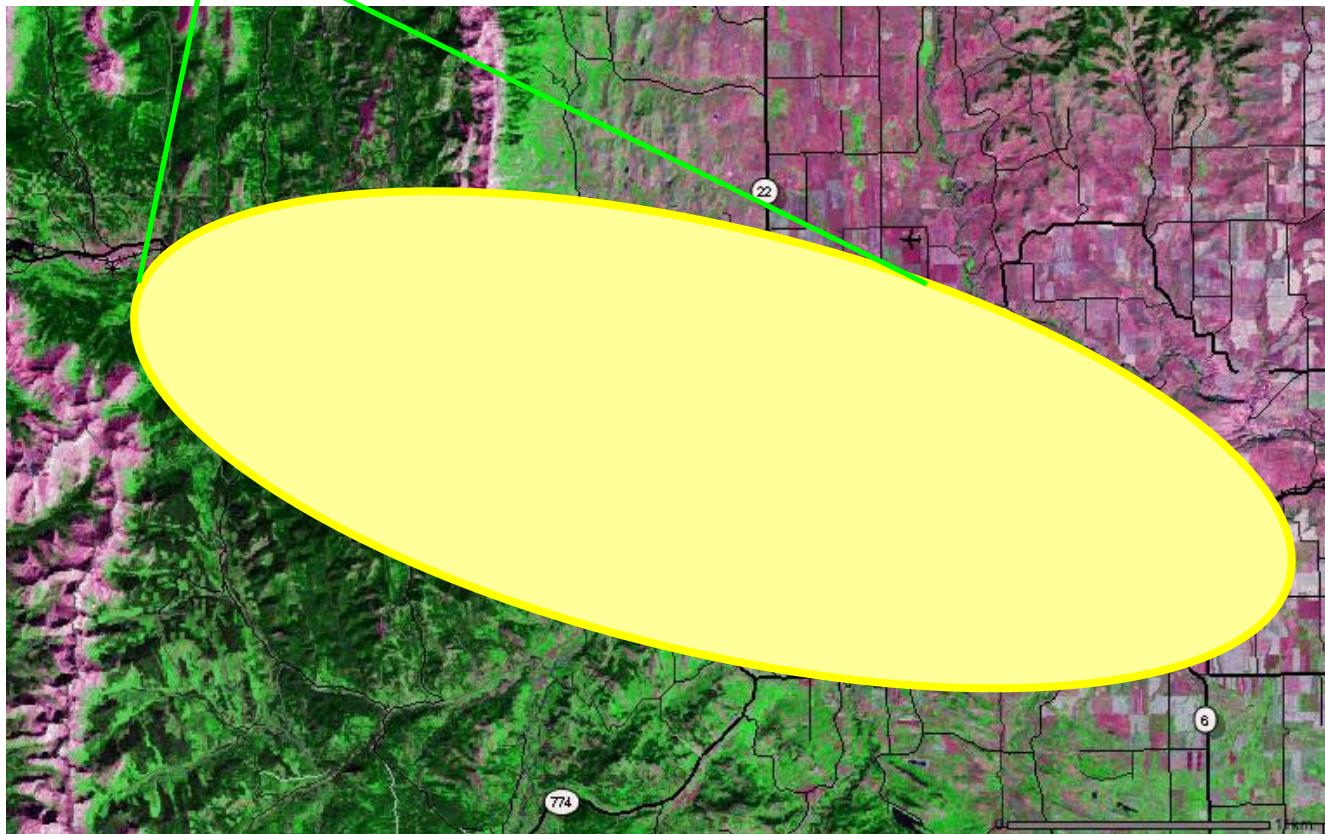

The higher the number the less precise the measurements are and more they deviate from one another (based on the triplicates)

Re: Crowsnest Pass – July Ambient Passive Summary Report

Enclosed is the Crowsnest Pass Ambient Passive Monitoring Report for **July 2006**.

Passive Monitoring

Included in this summary are the results of the monthly passives of Hydrogen Sulphide (H₂S), Sulphur Dioxide (SO₂), Nitrogen Dioxide (NO₂), and Ozone (O₃). The H₂S, SO₂ and NO₂ samples were collected in triplicate, however starting for the month of July the O₃ samples were reduced to a single sample collection with one set of duplicates (the duplicate is being rotated every month). There were no issues noted from the field logs for the month of July.

All samples were collected and analyzed with the following summary of results:

Summaries:

Average concentrations for H₂S passives ranged from 0.0 – 0.1 ppb, with a mean of 0.1 ppb
Average concentrations for SO₂ passives ranged from 0.2 – 2.1 ppb, with a mean of 0.6 ppb
Average concentrations for O₃ passives ranged from 28.9 – 34.1 ppb, with a mean of 31.9 ppb
Average concentrations for NO₂ passives ranged from 0.2 – 1.3 ppb, with a mean of 0.8 ppb

Additional statistical analysis has been performed to assess the triplicate results; the plots of these summaries are located at the end of this report.

If you have any questions, please contact the AQM department of Focus at 1-888-869-2252 or 1-888-466-6555.

Re: Crowsnest Pass – August Ambient Passive Summary Report – Revised.

Enclosed is the Crowsnest Pass Ambient Passive Monitoring Report for **August 2006**.

Passive Monitoring

Included in this summary are the results of the monthly passives of Hydrogen Sulphide (H₂S), Sulphur Dioxide (SO₂), Nitrogen Dioxide (NO₂), and Ozone (O₃). The H₂S, SO₂ and NO₂ samples were collected in triplicate, however starting for the month of July the O₃ samples were reduced to a single sample collection with one set of duplicates (the duplicate is being rotated every month). There were no issues noted from the field logs for the month of August.

All samples were collected and analyzed with the following summary of results:

Summaries:

Average concentrations for H₂S passives ranged from 0.0 – 0.2 ppb, with a mean of 0.1 ppb

Average concentrations for SO₂ passives ranged from 0.1 – 1.8 ppb, with a mean of 0.7 ppb

Average concentrations for O₃ passives ranged from 34.3 – 44.1 ppb, with a mean of 38.4 ppb

Average concentrations for NO₂ passives ranged from 0.4 – 2.4 ppb, with a mean of 1.5 ppb

Additional statistical analysis has been performed to assess the triplicate results; the plots of these summaries are located at the end of this report.

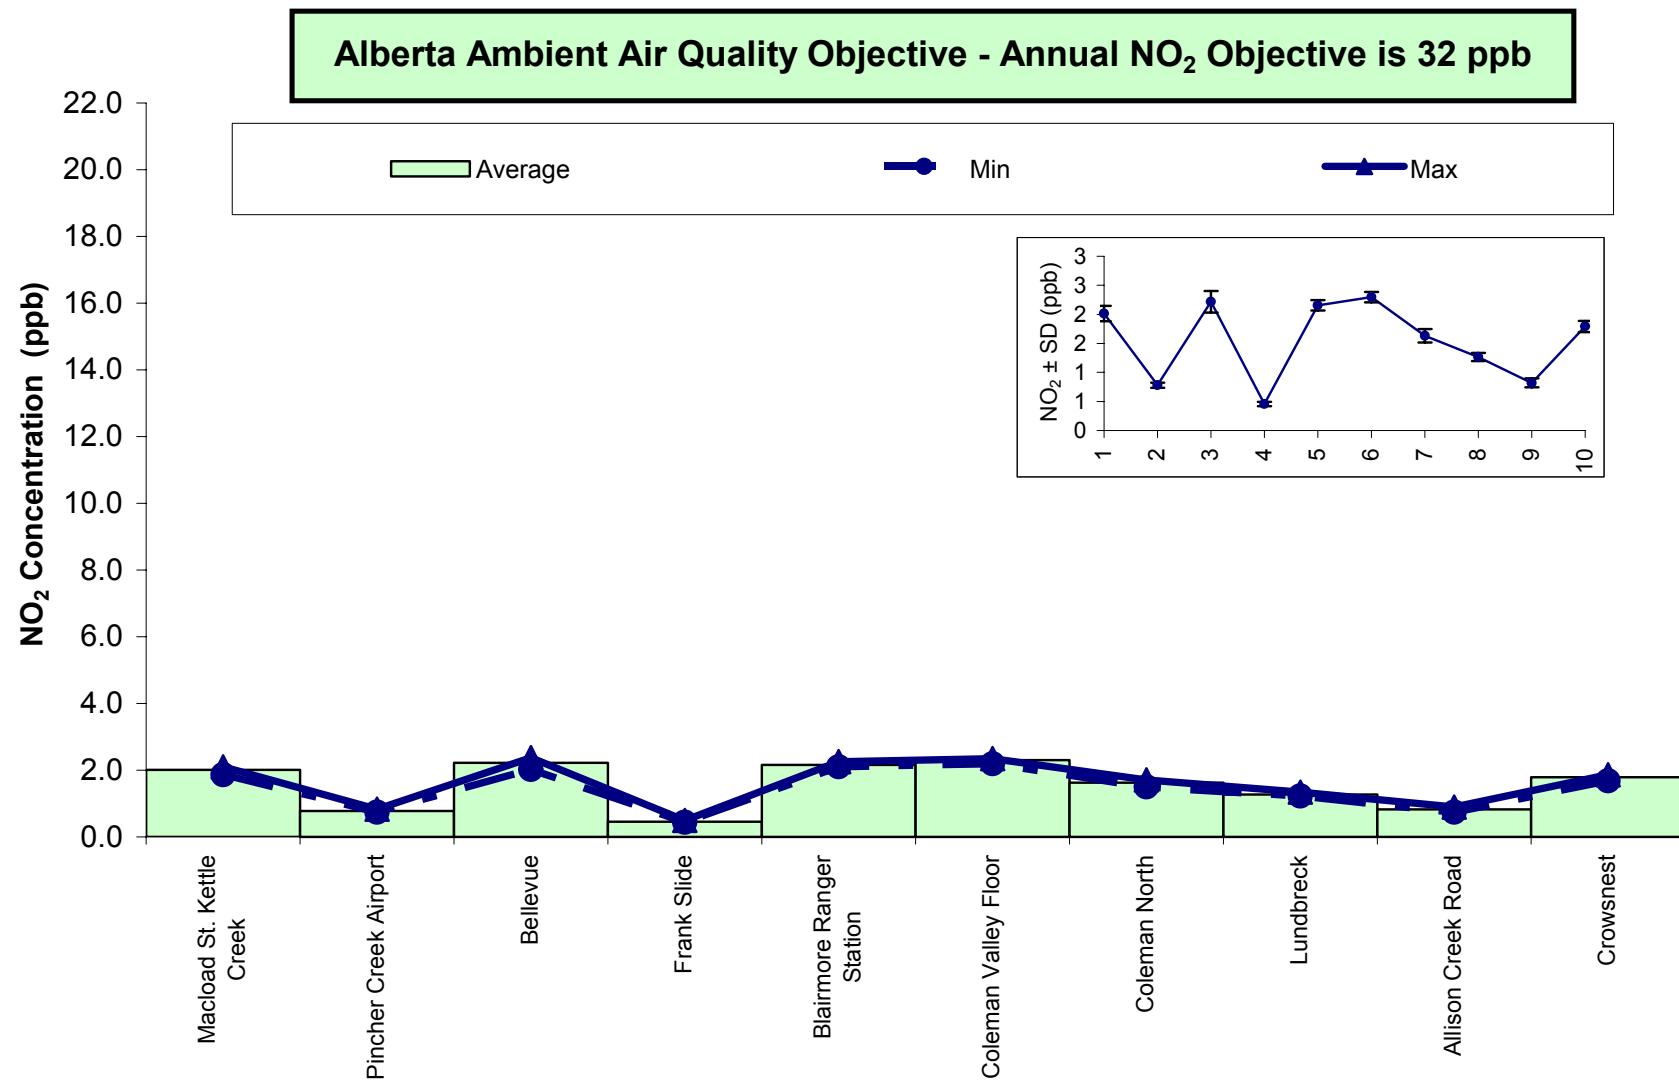

Figure 28. Crowsnest Pass – Nitrogen Dioxide Summary per Site

Crowsnest Pass – Passive Station Data for August 2006

Station Number	Station Name	H ₂ S ppb	SO ₂ ppb	O ₃ ppb	NO ₂ ppb
Triplicates					
1a	Macload St. Kettle Creek	0.1	0.1	37.7	2.1
1b	Macload St. Kettle Creek	0.1	0.1	36.3	2.1
1c	Macload St. Kettle Creek	0.1	0.2		1.9
2a	Pincher Creek Airport	0.1	0.2		0.8
2b	Pincher Creek Airport	0.1	0.2	40.3	0.8
2c	Pincher Creek Airport	0.1	0.2		0.7
3a	Bellevue	0.1	0.8		2.0
3b	Bellevue	0.1	1.0	38.5	2.4
3c	Bellevue	0.1	0.9		2.3
4a	Frank Slide	0.0	0.5		0.4
4b	Frank Slide	0.0	0.5	38.2	0.5
4c	Frank Slide	0.0	0.5		0.4
5a	Blairmore Ranger Station	0.1	0.9		2.1
5b	Blairmore Ranger Station	0.1	0.8	37.1	2.1
5c	Blairmore Ranger Station	0.1	0.7		2.3
6a	Coleman Valley Floor	0.2	1.7		2.3
6b	Coleman Valley Floor	0.1	1.8	34.3	2.3
6c	Coleman Valley Floor	0.1	1.5		2.2
7a	Coleman North	0.1	0.8		1.7
7b	Coleman North	0.1	0.8	43.2	1.5
7c	Coleman North	0.1	0.8		1.7
8a	Lundbreck	0.1	0.4		1.2
8b	Lundbreck	0.1	0.4	44.1	1.3
8c	Lundbreck	0.1	0.3		1.2
9a	Allison Creek Road	0.0	0.2		0.7
9b	Allison Creek Road	0.0	0.4	38.6	0.9
9c	Allison Creek Road	0.0	0.2		0.8
10a	Crowsnest	0.1	1.0	34.4	1.9
10b	Crowsnest	0.1	1.6		1.8
10c	Crowsnest	0.1	1.0		1.7

Summary H₂S Tables:

Site	H ₂ S				
	ppb	ppb	ppb	ppb	ppb
	min	max	average	stdev	variance
1	0.1	0.1	0.1	0.0	0.0
2	0.1	0.1	0.1	0.0	0.0
3	0.1	0.1	0.1	0.0	0.0
4	0.0	0.0	0.0	0.0	0.0
5	0.1	0.1	0.1	0.0	0.0
6	0.1	0.2	0.2	0.0	0.0
7	0.1	0.1	0.1	0.0	0.0
8	0.1	0.1	0.1	0.0	0.0
9	0.0	0.0	0.0	0.0	0.0
10	0.1	0.1	0.1	0.0	0.0

Summary SO₂ Tables:

Site	SO ₂ ppb				
	min	max	average	stdev	variance
1	0.1	0.2	0.1	0.0	0.0
2	0.2	0.2	0.2	0.0	0.0
3	0.8	1.0	0.9	0.1	0.0
4	0.5	0.5	0.5	0.0	0.0
5	0.7	0.9	0.8	0.1	0.0
6	1.5	1.8	1.7	0.2	0.0
7	0.8	0.8	0.8	0.0	0.0
8	0.3	0.4	0.4	0.0	0.0
9	0.2	0.4	0.3	0.1	0.0
10	1.0	1.6	1.2	0.4	0.1

Summary O₃ Tables:

Site	O ₃ ppb				
	min	max	average	stdev	variance
1	36.3	37.7	37.0	-	-
2	-	-	40.3	-	-
3	-	-	38.5	-	-
4	-	-	38.2	-	-
5	-	-	37.1	-	-
6	-	-	34.3	-	-
7	-	-	43.2	-	-
8	-	-	44.1	-	-
9	-	-	38.6	-	-
10	-	-	34.4	-	-

Summary NO₂ Tables:

Site	NO ₂ ppb				
	min	max	average	stdev	variance
1	1.9	2.1	2.0	0.1	0.0
2	0.7	0.8	0.8	0.0	0.0
3	2.0	2.4	2.2	0.2	0.0
4	0.4	0.5	0.5	0.0	0.0
5	2.1	2.3	2.2	0.1	0.0
6	2.2	2.3	2.3	0.1	0.0
7	1.5	1.7	1.6	0.1	0.0
8	1.2	1.3	1.3	0.1	0.0
9	0.7	0.9	0.8	0.1	0.0
10	1.7	1.9	1.8	0.1	0.0

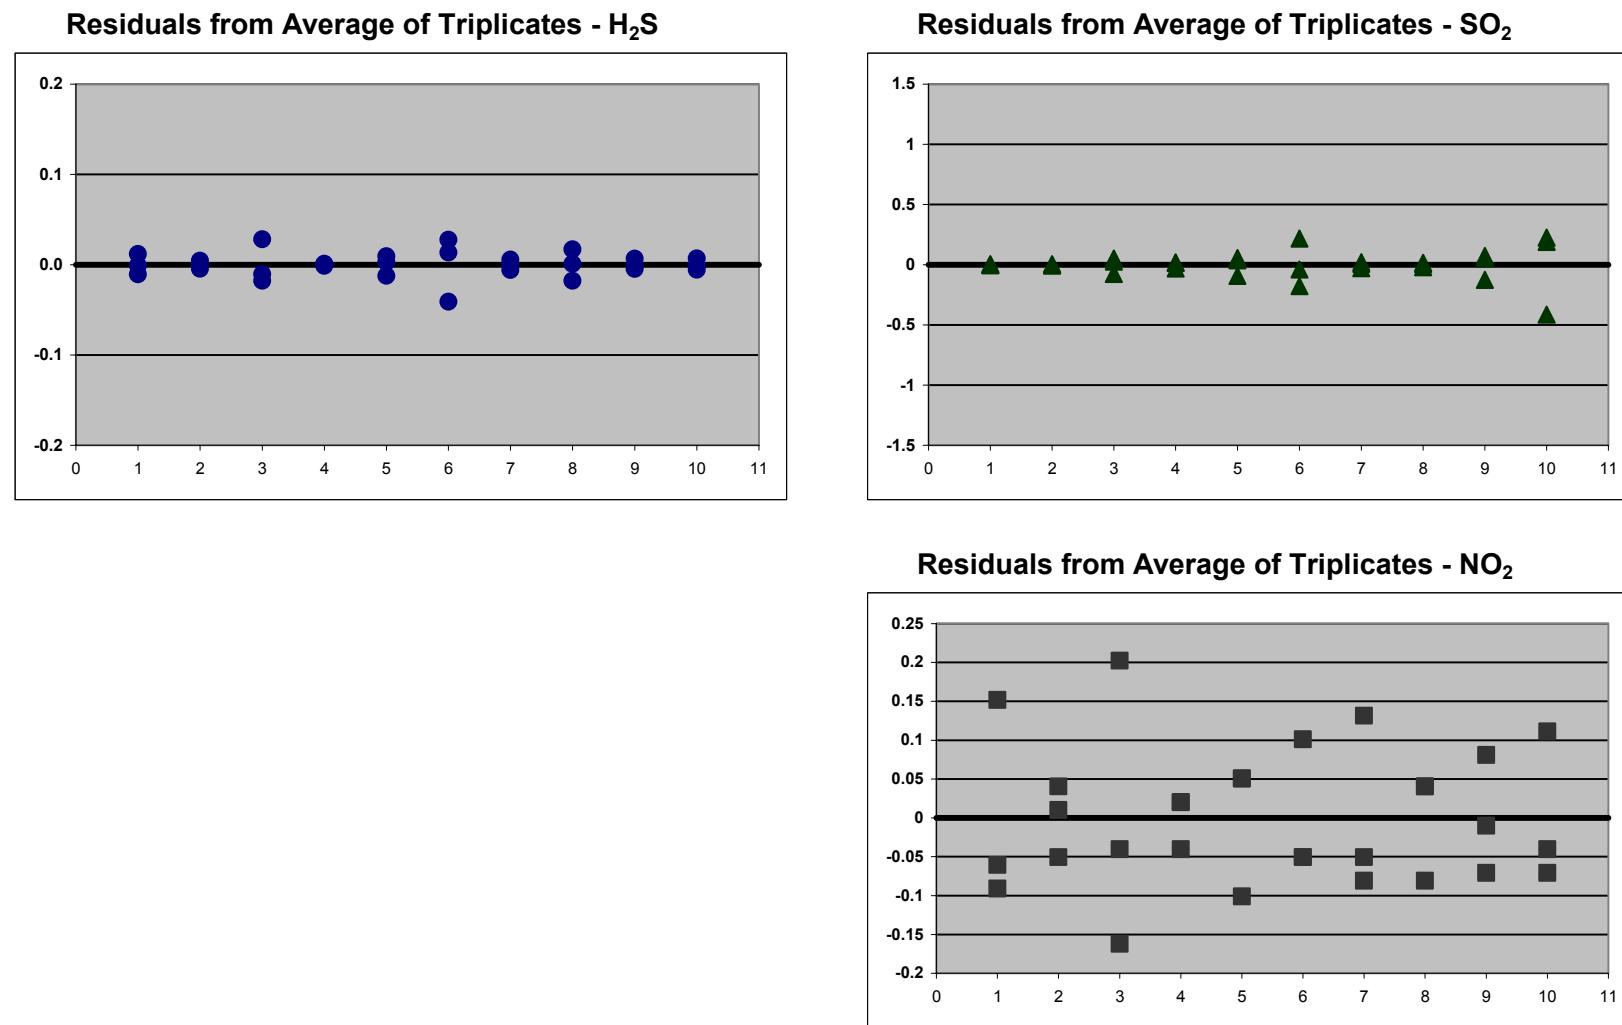

Figure 29. Residual Plot of the Individual readings compared to their means

Residuals are calculated by averaging the triplicate sample then subtracting each individual samples, as defined by:

$$\text{Residuals} = (\bar{x} - x)$$

The closer to the zero line the more precise the measurements are, and when samples are further from the zero line they are less precise based on the triplicates collected.

Sum of Squares of deviations of data points from their sample mean:

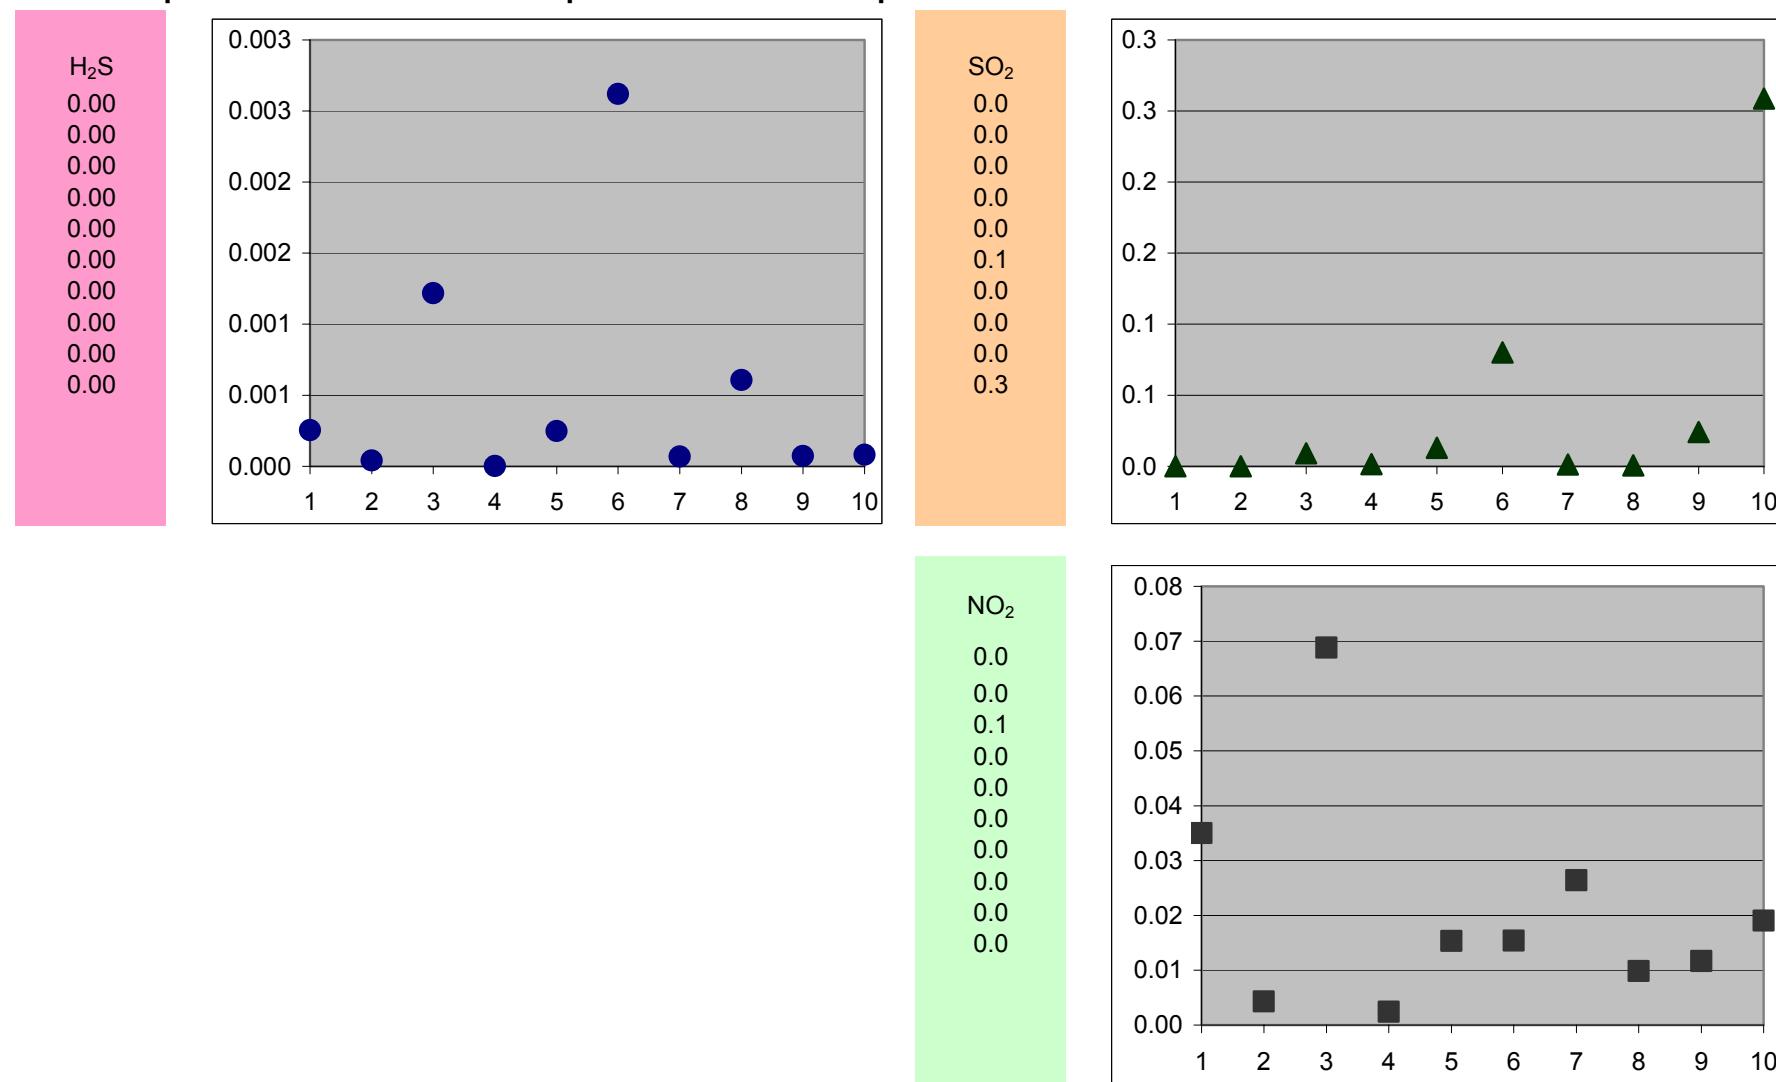

Figure 10. Sum of Squares of Deviations of the Triplicates from their means

The sum of squares of the deviations is the square of the differences between each individual point minus the mean of the triplicates; as defined by:

$$\text{Sum of Squares of Deviations} = \sum (x - \bar{x})^2$$

The higher the number the less precise the measurements are and more they deviate from one another (based on the triplicates)
